Introduction

HSO ProServ projects360 for Microsoft Dynamics 365

As a key component of HSO ProServ’s industry strategy for project-driven organizations, we’ve developed a deep set of extensions to the [Microsoft Dynamics 365 Finance and Operations service industries solution](#) to provide best-in-class ERP capabilities, drive the adoption of industry best practices, and accelerate [implementations of Dynamics 365](#) while also reducing your cost and risk.

For more information on [HSO ProServ projects360 for Microsoft Dynamics 365](#), please [write to us](#).

HSO ProServ *projects360* Industry Solution

projects360 Features Manual

At the top of the page, a Version drop-down is available to select the version you are currently on, and the manual will only reflect features available on that version. On the left of the page, use the Table of contents to select a specific topic you are looking for. Also, when on a specific projects360 form within Dynamics 365 Finance and Operations, clicking the Help button will bring you back to the correct article(s) for that form.

The topic areas included in the Feature Manual include:

- [Workspaces](#)
- [Project Management](#)
- [Activity Management](#)
- [Resource Management](#)
- [Time Management](#)
- [Transaction Enhancements](#)
- [Invoicing Enhancements](#)
- [Reporting Enhancements](#)
- [PSA Integrations](#)
- [Quotation Enhancements](#)
- [Office 365](#)

There is also a dedicated site for the projects360 for Project Operations solution and projects360 BI Feature Manual.

- [projects360 for Project Operations](#)
- [projects360 BI](#)

Your Feedback is Welcome!

This feature manual provides detailed information on all the features available in projects360. It continuously updated as versions and features change. If you have any suggestions or any feedback pertaining to documentation, existing features, or new feature requests, please either comment on an article or [email us](#).

OneVersion Policy

Overview

HSO ProServ develops and maintains several IP solutions on Dynamics 365. This includes projects360, aec360, accounting360 and consulting360 which are add-on solutions extending Microsoft Dynamics Finance and Operations core modules in particular Project Management and Accounting module. HSO ProServ ISV portfolio also consists of aec360 and legal360 for Dynamics Customer Engagement and other accelerators. The purpose of this document is to provide Customers and Partners deploying the HSO ProServ solutions, an in-depth view of OneVersion software update policies that are adhered to in line with Microsoft's recommended best practices. Note: projects360 for project operations has the same code base of projects360 with additional integrations, the core solution of projects360 will also follow the OneVersion update policy as described here.

Supported Versions

N and N-1 versions are supported

- Our standard policy is to support One major version and one minor version (ex: 10.0.11Maj, 10.0.12Min, 10.0.13Min, 10.0.14Min, 10.0.15Maj, we would support 10.0.14 and 10.0.15)
- Additionally, Hot fixes are supported for P1 issues on any two Major versions (in the above example we will release a HF for P1 on 10.0.11 or through 10.0.15)
- We have four Major releases in a Year that coincides with Microsoft's OneVersion release. All other Minor updates are only compatibility releases (that is if we find a breaking change from Microsoft, then we release a minor compatibility release). If no breaking issues, then we don't release a compatibility release but just issue a statement that the current version is forward compatible.
- The product team, occasionally vary the schedule for a major release date and push it for a week or two due to other priority commitments (supporting go live Customer, HF commitment etc). However, we will work closely with clients on their update plans and will support an early release with follow-on hot fix if needed.

Exceptions for P1 Issues

P1 definition: user wide impact, has not potential work arounds.

In general, P1 issues are deemed high-priority and are resolved as soon as possible. The first step in troubleshooting P1 issues is to recreate the issue on non-Client environment. To accelerate the root cause, the troubleshooting of the issue is done directly on the Clients development environments. Once the steps to recreate are determined, they are captured in DevOps and further investigated for resolution. Developers resolve the issue, a build kicks in the update to a QA environment with the code fix and tested before the P1 issue resolution is handed off to the Client.

Release Cadence

There are two major releases and several minor release. Major release contains ‘big rock’ work items. These are features that are significant product investments. Minor releases contain ‘small rock’ work items, quality updates and cumulative releases.

Here is an example of the release cadence shared from time to time.

Product Team

The UO product comprises of developers, technical architects, product champions and functional consultants. The Product Steerco team is responsible of the future roadmap decisions, funding and supporting other strategic decisions.

Team setup for projects360, aec360, PowerBI

Installation

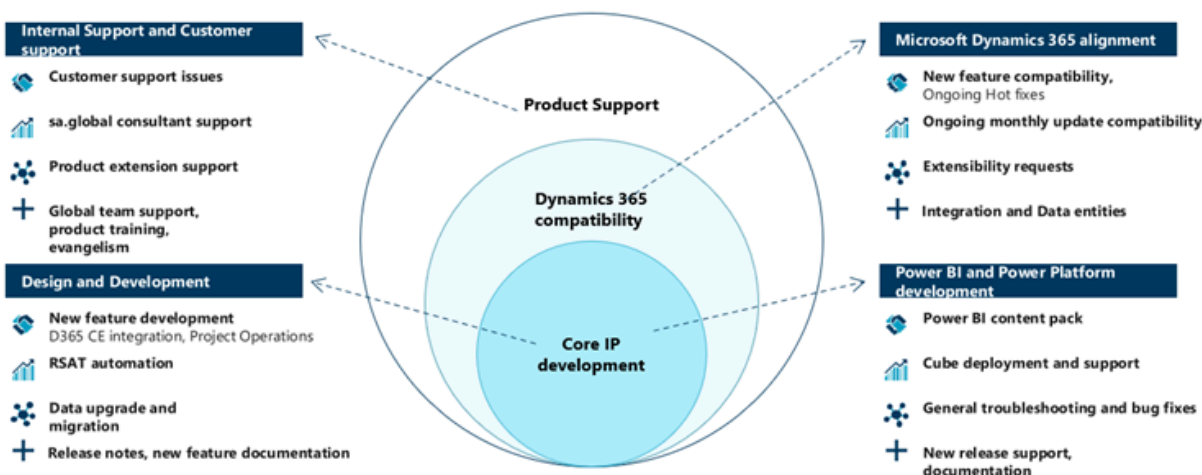

The installation of the deployable package is straightforward, in that, the Client subscribes to an LCS project. Users are notified when new version updates are made available along with Release notes. The release notes detail the net new features and quality issues that are addressed in the release. The deployable packages are stored in the LCS asset library. The Client has the option of using the deployable package or a model file for deploying software. Note: not all Client get access to the model files and is determined based on the Client contracts.

Product Team Setup

The product team is comprised of core IP development teams supported by extended teams for ongoing Client support, Power Platform, Power BI development and Regression Automation teams. Each team is fundamentally responsible for a specific set of tasks. For instance, core IP team is only responsible of net new feature development based on Client feedback. Feedback from various clients is captured in DevOps as a User Story. During sprint planning activities, the core team supported by the principal architect prioritize the features to be developed for the upcoming release. The cycle continues every sprint. There are several sprints before the official Release of the new version.

IP Development

DevOps Branch Strategy

Product baseline code is checked into DevOps repository. Each branch serves a release cadence. The features developed are merged between branches along with any ad hoc hotfixes that are released to Clients. An automated build system generates a build on demand and deploys code to various QA environments for validation of features. Developers connect using local VMs and synchronize code with DevOps repository (get latest) every day. Developer checks out Development branch, writes modification code and tests in the local hosted dev boxes

- Developer checks code into Development branch
- Dev Lead forward-integrates the change into Mainline
- Mainline branch is deployed to Mainline build -environment via Azure DevOps. Automated tests are run as part of build process. Manual testing is also performed here.
- Release manager, releases package to QA environment via continuous integration option of Azure DevOps.
- Release manager creates a cut-off branch to the Release branch
- Managing separate Release branches based on the platform compatibility to support Customers on different platform versions

Development Box (locally hosted)

- **Purpose:** Allow feature development
- **Branch:** Development
- **Build:** Manually sync the proper Azure DevOps branch
- **Deploy:** Manually sync the proper Azure DevOps branch

Mainline/Build (Tier 1 SB)

- **Purpose:** Automated build and tests
- **Branch:** Mainline, Merge completed Development Feature
- **Build:** Automatic Azure DevOps build
- **Deploy:** Continuous integration via Azure DevOps

QA/Release (Tier 1 SB)

- **Purpose:** Testing and Generate a clean deployable package for release
- **Branch:** NA
- **Build:** Continuous integration via Azure DevOps
- **Deploy:** Continuous integration via Azure DevOps

UAT (Tier 2 SB) (if any)

Unit Testing and Code Quality

In this process, Developer concentrates on the code quality and the development standards as listed below (example):

- Quality code implementation approach
- Performance based code implementation

- Avoiding redundant code
- Proper naming conventions
- Best practices-based development
- Development standard at each object level (AOT)
- Declare variables as locally as possible.
- Check the error conditions in the beginning; return/abort as early as possible.
- Have only one successful return point in the code (typically, the last statement), with the exception of switch cases, or when checking for start conditions.

ALM Lifecycle and Feature Prioritization

ALM lifecycle of the IP starts with the Steerco meeting with the Customer Advisory Board (CAB). The CAB is a list of industry specific representatives from various HSO ProServ Client portfolio. The CAB team along with the Product team meet once every quarter to chart out road map items. All feedback from CAB is tracked as DevOps work items and goes through the sprint planning meetings for design and development of the features.

Hotfix Requests

Hotfix requests are only supported and released for on 'n' and 'n-1' versions. All hot fix requests are first qualified for priority and severity of the incident. If the issue has a work around, the fix is only resolved in an upcoming version. If a hot fix request is qualified (has wide impact to many users, financial impact like invoicing, implementation teams finding showstoppers during UAT etc). The hot fix is released on the version that it is requested in and then updated to the main branch so future releases includes the one-off fix.

Frequently Asked Questions

1. **When are the main releases?**

During Spring, Summer, Fall and Winter in line with the major releases.

2. What is my downtime on the ISV updates?

Depends on the number of ISVs that are deployed together, typically an update can be achieved within the 1-2 hour window.

3. How do you ensure quality of updates?

We run RSAT regressions on every major release and do a subset of key test scripts for the minor compatibility releases. We have over 150 test scripts that are automated and used in regression testing. These test scripts are completely run for every major release and the exit criteria for any release is a 100% pass rate. For minor releases, the criteria is slightly different, we will release if the pass rate is in the 90% range and if there are no P1 issue identified.

4. What is your guidance to customers who are taking Microsoft updates? Do you require them to take your ISV update?

We encourage them to take all ISV updates available at the same time as the Microsoft update. It saves time on testing, environment deployments, etc. Most all do. If someone didn't want to, we would allow them skip. Our published version supportability is similar to Microsoft's one and then we just work with customers that have any reasons/issues for falling behind.

5. So, a customer can take MSFT update and still run the current version of ISV they are using in production?

We do support forward compatibility if there are no breaking issues from Microsoft in an update. So, a customer could take a Microsoft update and stay on our lower version update. If we have released a major version or compatibility update, we prefer they take it but will work with them to solve the situation either way.

6. Where can I find more help about the product?

- [projects360 product manual](#)
- [projects360 BI manual](#)

7. How can I reach to the Product team to share my ideas, feedback or issues.

- For feedback and ideas, email to – [Product Ideas](#)
- For issues, email to – [Product Support](#)

What's New in Version 10.0.38

projects360 10.0.38 for Microsoft Dynamics 365 Finance & Operations introduces a set of new features such as Update of ETC/EAC automatically with posted transaction, Timecard hours validation and weekly report, Timecard for the Mobile Time Entry App, All contract invoices. This release also includes lots of enhancements to existing features such as Invoice archives, Late timesheet, Workspaces, Simple adjustments, ETC/EAC management, Fee management, Mobile time entry PowerApps, Comments for unit codes.

New Features

Automatically update ETC/EAC forecast with posted transaction

This new feature automatically reduces the ETC (Estimate To Complete) forecast upon the posting of project hours and expenses transactions. The functionality is parameter-controlled, offering improved control. It is compatible with both the 'Manual ETC forecast' and 'Manual ETC cost buckets' data sources, and it applies to both Hour and Cost calculation methods.

The screenshot shows the 'Set up parameters for fee management' configuration page. The 'Update manual ETC forecast while...' option is highlighted with a green box.

Section	Parameter	Value
ACTIVATE FEE MANAGEMENT	Activate fee management	Yes
	BUDGET	Fee
	Contract value category	FEEM
	Contract value model	FEEM
CONTRACT HOURS	Contract hours category	Service
	Contract hours model	FEEM
	BILLING CATEGORY	Progress
	Fixed fee	MilestoneFee
REVENUE ADJUSTMENT 606 COMPLIANCE	Auto-reverse NTE adjustments	Yes
	Auto-reverse contract cap adjust...	Yes
	REVENUE ADJUSTMENT CATEGORY	Percentage complete adjustment
	NTE adjustment	NTEAdj
REVENUE ADJUSTMENT POSTING	Use adjustment date as posting ...	No
	% PROGRESS HISTORY	Maintain % progress history
	PAY WHEN PAID	PWP for Progress/Fixed fee
	Auto-select vendor invoices	No
INDIRECT COST	Include indirect cost	Yes
	ADMINISTRATION FEE	Administration fee
	Admin fee category	Admin Fee
	BEGINNING BALANCES	Update progress billing rule
ETC/EAC MANAGEMENT	Activate ETC/EAC management	Yes
	ETC/EAC data source	Manual ETC forecast
	ETC/EAC calculation method	Cost
	Manual ETC forecast model	Manual ETC
ETC/EAC COST MULTIPLIER	ETC/EAC cost multiplier	Yes
	Target cost multiplier	1.00
	Effective cost forecast model	ManualCost
	FEE BILLING PROJECTIONS	Activate fee billing projections
FORM LAYOUT	Rollup totals by parent project	Yes
	Hide fee type - None	No
	Update manual ETC forecast while...	Yes
	Display revenue deviation	Yes

Timecard hours validation and weekly report

New features will be added to the Timecard entry experience.

- Timecard entry validations have been implemented to ensure that timesheet and timecard hours match. In cases of mismatch, validation messages are displayed to the user.
- These validations can be configured in three ways: None (no validation), Display warning (warning message displayed, but timesheets can be submitted), and Mandatory (validation is triggers, prohibiting the timesheet submission).

The screenshot shows the 'Timecard' entry interface for user '00020423 : Aaron Con'. The 'Week summary - Total hours' section displays a table with columns: Date, Day of the week, Time in, Time out, Time on br..., Number of..., Total time, Non-work..., and Hours difference. The data for the week of 1/15/2024 to 1/21/2024 is shown. The 'Hours difference' column shows a mismatch for 1/19/2024, 1/18/2024, and 1/17/2024, indicated by red triangles.

The 'Action center' on the right shows 4 total errors. The errors listed are:

- Errors in timesheet validation (Less than a minute ago)
- Timecard hours don't match timesheet hours for 1/19/2024 (Less than a minute ago)
- Timecard hours don't match timesheet hours for 1/18/2024 (Less than a minute ago)
- Timecard hours don't match timesheet hours for 1/17/2024 (Less than a minute ago)

A 'Clear all' button is located at the bottom of the action center.

The screenshot shows the 'Timecard' entry interface for user '00020423 : Aaron Con'. The 'Week summary - Total hours' section displays a table with columns: Date, Day of the week, Time in, Time out, Time on br..., Number of..., Total time, Non-work..., and Hours difference. The data for the week of 1/15/2024 to 1/21/2024 is shown. The 'Hours difference' column shows a mismatch for 1/19/2024, 1/18/2024, and 1/17/2024, indicated by red triangles.

The 'Hours difference' column is highlighted with a green box, showing the following values:

Date	Day of the week	Time in	Time out	Time on br...	Number of...	Total time	Non-work...	Hours difference
1/15/2024	Monday	09:30:00	18:30:00	1.00	1	8.00		
1/16/2024	Tuesday	09:30:00	18:30:00	1.00	1	8.00		
1/17/2024	Wednesday	09:30:00	18:30:00	0.00	0	9.00		△
1/18/2024	Thursday	09:30:00	18:30:00	0.00	0	9.00		△
1/19/2024	Friday	09:30:00	18:30:00	0.00	0	9.00		△
1/20/2024	Saturday	00:00:00	00:00:00	0.00	0	0.00	✓	
1/21/2024	Sunday	00:00:00	00:00:00	0.00	0	0.00	✓	

The 'Timesheet lines' section at the bottom shows a table with columns: Legal entity, Customer name, Main project, Sea..., Project ID, Project name, Work location ID, Activity number, Activity, Category, and a weekly summary of hours for each day from Mon 01/15 to Sat 01/20.

- The new report provides Timecard information in weekly basis.

Timecard weekly summary report

Total				6.50		38.50	

Timecard for the Mobile Time Entry App

Timecard entry is now available from the Mobile Time Entry App.

- Timecard can now be activated by configuration allowing users to see and maintain the Timecard information.
- The capability of updating Time in/out as well as breaks.

All contract invoices

We have introduced two new inquiries/forms 'All contract invoices' and 'My contract invoices,' aimed at presenting a comprehensive view of both open and paid invoices.

- These forms display all invoices including those that have been paid.
- 'My contract invoices' form specifically showcases project invoices where the user is assigned as Project Manager or Project Accountant.

Features Enhanced

Invoice archives

With this enhancement, we have optimized the sequence of files in the invoice archive PDF. Previously, the file order was haphazard, but with this release, the files in the PDF are now organized in the following sequence -

- Invoice transactions report
- Timesheet header external documents (Resource Name -> Date)
- Timesheet lines external documents (Resource Name -> Date)
- Vendor invoice header external documents (Vendor account-> Invoice id)
- Vendor invoice lines external documents (Vendor account-> Invoice id)
- Expense report header external documents (Resource Name -> Date)
- Expense report lines external documents (Resource Name -> Date)
- Expense journal header external documents (Resource Name -> Date)
- Expense journal lines external documents (Resource Name -> Date)
- Invoice proposal external documents (Attachment dates)
- Billing schedule header external documents (Attachment dates)
- Billing schedule lines external documents (Attachment dates)
- Parent project external documents (Attachment dates)
- Project external documents (Attachment dates)
- Timesheet report (Resource Name -> Date)

- Expense report (Resource Name -> Date)

Late timesheet

We have improved this feature by introducing the capability to send late/missing timesheet emails through a batch process. This enhancement minimizes manual intervention and can be scheduled on periodic basis.

Expense line level approval on workspace

In this latest release, we have introduced the Expense line level approval tile to the Project manager workspace. With the existing presence of timesheet line level approval, this addition significantly benefits project managers by providing a single workspace to manage both timesheets and expenses.

Simple adjustments

The Re-apply sales price, which was initially limited to hour transactions, has now been extended to include expense transactions as well. With this enhancement, users can reapply sales price changes within various forms where simple adjustments functionality exists without navigating away. Specifically, within the invoice proposal, performing a reapply sales price action adjusts the selected expense transactions and brings in the new transaction into the proposal without user going out of the form.

ETC/EAC management

This new enhancement enables users to define the ‘Exclude from multiplier journal’ setting at the project group level, which is subsequently inherited by all new projects created under this project group. This provides users with greater control over the implementation of the multiplier journals functionality, allowing them to specify project groups where this feature should or should not be applied.

Revenue adjustment posting

In this enhancement, users are now given the flexibility to utilize the adjustment date as the posting date when executing the revenue adjustments. This feature can be activated by checking a box within the projects360 fee management parameters. Once enabled, users will no longer encounter the posting date field on the revenue adjustment form. Instead, a disabled toggle button labeled 'Use adjustment date as posting date' will be displayed.

+

- Ability to select the company for users hired in multiple legal entities.

- Multi-language capability has been improved supporting now traditional Chinese.

Comments for Unit code

With this enhancement, we have expanded the maximum length of the description field for unit codes entry in the timesheet form to 255 characters, enabling users to provide additional details if necessary.

What's New in Version 10.0.36

projects360 10.0.36 for Microsoft Dynamics 365 Finance & Operations introduces a set of new features such as ETC/EAC multiplier journals, Fee billing projections, Sales price cap. This release also includes lots of enhancements to existing features such as Contract management, Adjustment request, Resourcing, Billing schedules, Pre-billing summary, Personal time off, HR automated events, Automatic transactions, Simple adjustments, Annual holidays, Invoicing grouping, Invoice archives, Manage pending time.

New Features

ETC/EAC cost multiplier journals (Preview)

“ETC/EAC Cost multiplier journals” new feature will allow Project Accountants to use cost multipliers to review and analyze the current status of the whole project based on “ETC cost buckets” and apply a new adjusted “Effective multiplier” afterwards updating the project cost forecast.

The following multipliers will be calculated and displayed from Main project perspective:

- AEC cost multiplier. Current multiplier based on Actual + ETC cost vs contract value. This multiplier is the real one and doesn't consider adjustments.
- Targeted cost multiplier. Targeted multipliers can be configured for each project. This will allow us to compare the targeted vs the current/effective ones.
- Effective cost multiplier. This multiplier will consider all the adjustments made so far by “ETC/EAC cost multiplier journals”.

Multipliers will be displayed as well within the “ETC/EAC management view” in Fee management. Also, the ‘effective cost multiplier’ can be used for revenue adjustments.

Fee billing projections

This new feature provides the ability to forecast the project billing projections.

- Billing projections will be available as a new view in “Fee management” form.
- Projected billing amounts will be stored as forecast transactions for each specific period.

Sales price cap

Now we can define sales price caps when utilizing “Multiplier/Charge percentage” models based on cost .

- Sales price cap value will be applied if the price calculation overruns the defined cap.

Features Enhanced

Contract management

Enhanced cross-entity access

This enhancement introduces the ability for users to seamlessly access and review contract management records for projects that extend beyond their current logged-in entity. With this enhancement, users gain the flexibility to explore contract management data from all projects list, broadening their scope and access to

vital information without navigating too much on different forms or without changing the company.

Approval for future projects

We've implemented a logic upgrade that now enables the approval of contract agreements for future projects. In practical terms, this means that if you input an approval date that precedes the project's originally specified start date, our system will intelligently adapt and instead of sticking to the original date, it will seamlessly adjust and utilize the approval date as the project start date, ensuring precision and flexibility in creating the contract values for the projects starting in future.

Status on Adjustment request

With this enhancement, users will now have the ability to seamlessly access and view the identical status that is updated on the Adjustment Request when utilizing the "Update Status" process. This streamlined feature ensures transparency and consistency in tracking and managing status updates, providing a unified view of progress and changes across the system.

Resourcing

Resource view/Project view

In this enhancement, we've harnessed the full potential of the grid space within the Resource view and Project view forms. Now, users can effortlessly view greater number of records for both resources and projects. This enhancement optimizes the user experience, allowing for more comprehensive and efficient management of resources and projects within the system.

Intercompany resource forecast pricing

With this enhancement, users gain the valuable ability to get the real-time cost prices and sales prices within intercompany resource forecast records. These updates are governed by parameter controls, empowering users with control and visibility over pricing for their intercompany resource forecasts. Currently, we are catering only for the Sales price model as “Qty”.

Billing schedules

Remaining projects.

Previously, when creating billing schedule groups, it was a bit cumbersome as projects that had already been selected in prior groups still appeared as options for selection. However, with our latest enhancement, we’ve streamlined this process. Now, in the “Remaining Projects” grid on billing schedule groups, you’ll exclusively see projects linked to the specific “Project Contract ID” that haven’t already been chosen in any of the existing billing schedule groups. This improvement not only simplifies the user experience but also prevents the inadvertent selection of the same projects across multiple billing schedule groups, ensuring efficiency and accuracy.

Billing calendar on Billing schedule.

In this enhancement, we’ve introduced the “Billing Calendar” field directly into the billing schedule list page. This addition empowers users to effortlessly filter their billing schedules right from the billing schedule list page, providing a convenient and efficient way to organize and access critical billing information.

Personal time off

In this enhancement, we've liberated the "PTO Balances" feature from its previous dependency on the "PTO Request" feature. What this means is that now, even if you haven't activated the "PTO Request" feature, you can fully utilize the "PTO Balances" feature independently. Both functionalities are now governed by separate, user-controlled parameters, granting you the flexibility to tailor your system precisely to your needs.

HR automated events

Support for Multiple domains

With this enhancement, we empower users to define multiple email domains within the HR automated parameters. When creating a user profile for an employee in the system, our enhanced logic now exhibits increased flexibility. It initially scrutinizes the employee's email domain and meticulously contrasts it with the primary domain specified in the parameters. If a match is not found, the system seamlessly proceeds to explore the secondary domains for a suitable match. This enhancement streamlines the user creation process and ensures seamless integration of employee records with varying email domains.

The screenshot displays the 'Human resource automated event parameters' configuration interface. The left sidebar shows the navigation menu with 'Employee' selected. The main content area is titled 'Set up requirements for employee' and contains several sections:

- Resource:** Includes 'Create resource' (Yes), 'Default category' (Design), 'Require start/stop time' (Yes), 'Time card required' (Yes), 'RESOURCE SCHEDULING' (Standard), and 'VALIDATION' (Yes).
- User:** Includes 'Create user' (Yes) and 'Enable' (Yes).
- SECURITY AND DOMAIN:** Includes 'Security roles' (Resource manager System ...) and 'Primary domain for email alias' (www.hsoprotserv.com).
- Additional domains for email aliases:** A table with two entries: 'www.360ag.com' and 'www.hsoprotserv.com'.
- Vendor:** Includes 'Resource pricing' and 'Financial dimensions'.

'Known as' name

We identified a distinct need within organizations where the 'Known as' name was being used in conjunction with the last name to generate employee names. Recognizing this requirement, we have now incorporated the 'Known as' field into our ever-evolving list of features. It's important to note that this addition is accessible only when HR automated parameters are activated, ensuring that organizations can seamlessly integrate the 'Known as' name into their employee creation process, streamlining naming conventions for enhanced clarity and precision.

Automatic transactions

Automatic transactions for Intercompany

Our automatic transactions functionality has been enhanced to provide you with even greater control over the creation of intercompany transactions for every rule. We've introduced a new field on the automatic transactions rule page, empowering you to fine-tune the system's behavior to align perfectly with your needs. Within this field, you'll find three distinct options at your disposal, the 3 options are –

- “Include all transactions”. All transactions are included. This is like how the logic currently behaves.
- “Exclude intercompany transactions”. The rule will skip transactions that are considered intercompany.
- “Exclude non-intercompany transactions”. The rule will skip transactions that are not considered intercompany.

The screenshot displays the 'Automatic transaction rules' interface. At the top, there's a breadcrumb trail: 'Finance and Operations' > 'Project management and accounting' > 'Projects' > 'My projects'. Below this, a navigation bar includes 'Save', 'New', 'Delete', 'Automatic transactions', and 'Options'. The main content area is titled 'Automatic transaction rules' and features a table with the following columns: Rule ID, Description, Start date, End date, Origin transaction type, Valid for category, Category relation, Valid for project, Project relation, Project contract ID, Resource, Active, and Intercompany. A dropdown menu is open for the 'Intercompany' column of the first rule, showing three options: 'Include all transactions', 'Exclude intercompany transactions', and 'Exclude non-intercompany transactions'. Below the table, there are sections for 'Automatic transaction rule details' including 'AUTOMATIC TRANSACTION', 'OFFSET LEDGER ACCOUNT', 'COST PRICE', 'SALES PRICE', and 'DESTINATION PROJECT'.

Project stage

In this enhancement, we've strategically relocated the project stage check to the forefront while creating automatic transactions, mitigating performance issues that may have arisen when executing this process through batch jobs.

Simple adjustments

Role modification on Simple adjustments.

In this enhancement, we have added an option to modify Role ID for the hour transactions through simple adjustments. This will help users to modify the role ID on the posted transactions.

Annual holidays

In this enhancement, the creation of an annual holiday record now seamlessly marks the corresponding day as “closed” in the linked calendar. This update not only reflects the change in the working day but also ensures an accurate adjustment of the utilization target.

Invoicing grouping

In this enhancement, we’ve added a new feature that allows you to group invoice transactions based on resource roles. By configuring the desired attribute, users gain the flexibility to intelligently group their transactions, streamlining their invoicing process for greater efficiency and control.

Invoice archives

In this enhancement, we’ve introduced a new functionality that empowers users to effortlessly merge the invoice report and all associated invoice archive documents into a single, comprehensive PDF. This streamlined PDF can be seamlessly sent to customers via email, simplifying the communication process and providing a cohesive and better representation of invoice information. This is controlled by a new parameter, giving users precise control over this feature.

Along with this we have renamed the file name that is generating during the creation process of Invoice report and Invoice archive.

Manage pending time

This enhanced functionality empowers users with the flexibility to precisely determine where the calendar appointment description should populate within the internal comments, external comments, or both while importing the calendar appointment. This newfound control offers a superior means of managing information flow from calendar appointments to effectively handle pending forms and timesheets.

What's New in Version 10.0.34

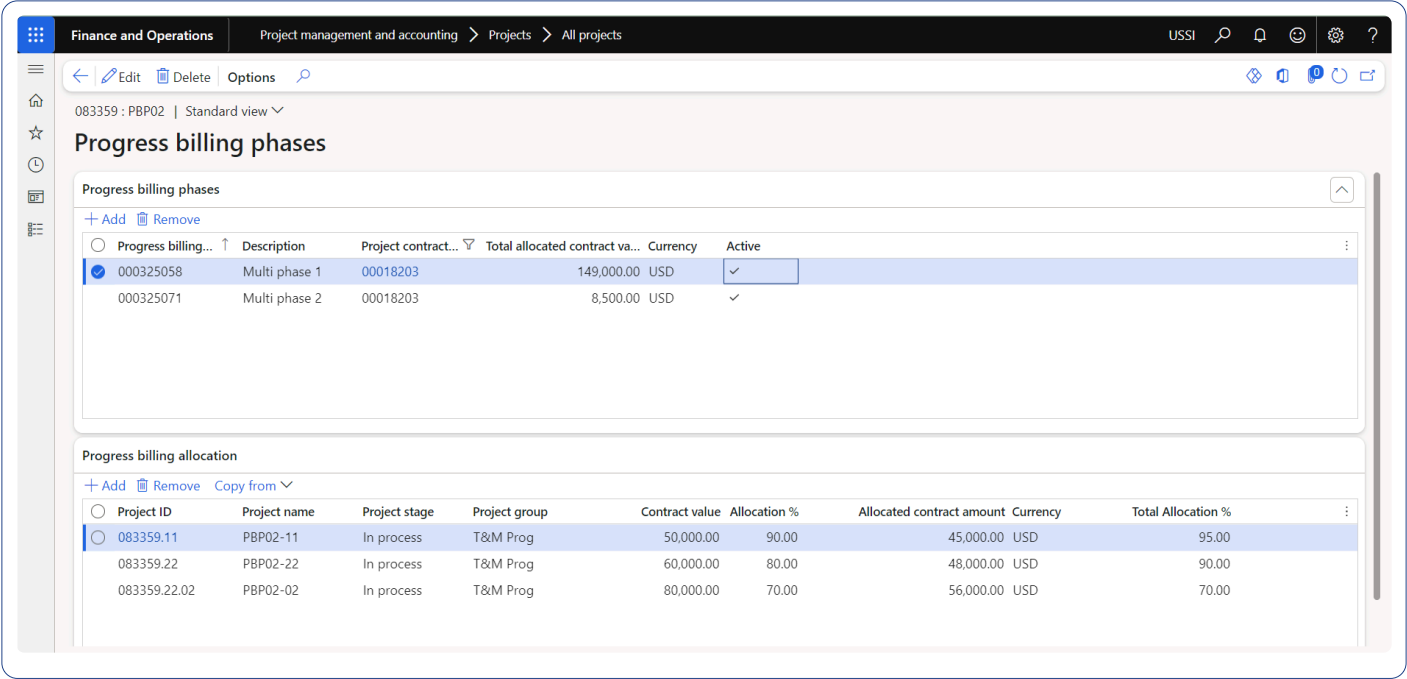

projects360 10.0.34 for Microsoft Dynamics 365 Finance & Operations introduces a set of new features such as Progress billing phases on billing schedule, New Invoice Markup review tool, Cost plus rate for expense transactions, Automatic transaction reversal, Additional decimal support for Mileage functionality on Unit code. This release also includes lots of enhancements to existing features such as Unit code entries, Automatic transactions, Billing schedule, Pre-billing summary, HR automated events, Simple adjustments, Expense approval to expense line level, Manage pending time, Resourcing and Cash basis accounting for intercompany.

New Features

Progress billing phases

The new Progress billing phases functionality in Billing schedule enables users to perform progress billing based on a completely new configurable structure only for invoicing purposes. Users can define different phases and % of the contract value to be billed in each phase, thus providing the increased flexibility in the invoicing process.

Users can define progress billing phases at the project contract level, allowing for precise allocation of progress percentages throughout the project or subproject duration. By configuring these phases, users can accurately track and reflect the progress made on a project, resulting in the generation of invoices that align with the project's advancement.

New Invoice document review tool

This new functionality allows users to manage Invoice document review in PDF format with the help of Apryse markup tool. The Apryse tool empowers users with a robust suite of cross-platform annotations and markup tools, specifically designed for PDF document type. With its versatility, users can collaborate, highlight key points, add comments, and make edits seamlessly across various PDF's, ensuring efficient communication and collaboration. These capabilities enable users to make the required changes directly on the PDF invoice, ensuring accuracy and reducing the need for manual adjustments. These capabilities has been extended to Pre-billing summary report also.

This new feature is available only for clients with extended licensing, and it can be enabled in project360 parameters.

Automatic transaction reversal

This new feature enables users to generate reversals swiftly for automatic transactions that were mistakenly posted previously. When automatic transactions are posted by mistake, users can utilize this feature by just

clicking a button to initiate the reversal process. On the event of reversal, the system automatically creates an entry that offsets the previously posted transactions, effectively nullifying impact on the financial data.

Mileage functionality on unit code

We are excited to introduce a new functionality that enhances the unit code entry form by allowing users to create mileage expenses effortlessly. With this added feature, users can input mileage expenses with up to 3 decimal places, aligning it with the familiar standard mileage functionality found on expense reports.

Furthermore, this extended functionality goes beyond just the entry form. It also encompasses the invoice grouping, where the 3 decimal places for mileage expenses are now accurately displayed. Users can witness this enhanced precision reflected in the Invoice proposal report and finally on the project invoice report providing comprehensive reporting process.

Features Enhanced

Unit code entries

Flexibility to modify unit codes.

This new enhancement offers users the capability to modify unit code information when a timesheet is returned for correction. Aligned with the standard timesheet functionality, this enhancement empowers users to make necessary corrections or modifications to the information before resubmitting the document for approval. This ensures greater accuracy and flexibility in the timesheet management process, allowing for seamless adjustments and subsequent approval.

Automatic transactions

Increase number of decimals for multiplier

In this enhancement, the number of decimals for “Cost multiplier” and “Sales multiplier” in Automatic transactions has been increased to five. This update allows for greater flexibility in calculating cost and sales multipliers for automatic transactions. By increasing the number of decimals to five, users can now input more precise values for these multipliers, accommodating scenarios that require a higher level of accuracy.

Automatic transactions in period set as None

In this enhancement, users now have the ability to post automatic transactions in the next open period when the ledger period is set as None for the project module. This functionality is enabled when the “Automatically set accounting date to open ledger period” parameter is turned on in the standard project management and accounting parameters. It eliminates the need for manual intervention to set the accounting date or adjust the ledger period, saving time and effort for users.

Billing schedule by approver

In this enhancement, a new form is introduced specifically for billing approvers. This form consolidates all the billing schedules they are responsible for, providing them with a comprehensive overview in a single interface. This streamlined view enables billing approvers to swiftly assess the billing schedules and take prompt actions and decisions. With this enhanced form, billing approvers can efficiently manage their responsibilities and expedite the billing process.

Pre-billing summary

In this enhancement, a new parameter “Show timesheet comments” has been introduced for the prebilling summary report, which determines whether timesheet Internal/External comments for hour transactions are to be displayed. This parameter allows users to customize the visibility of the comments in the prebilling summary report based on their preferences or specific reporting requirements.

Resourcing

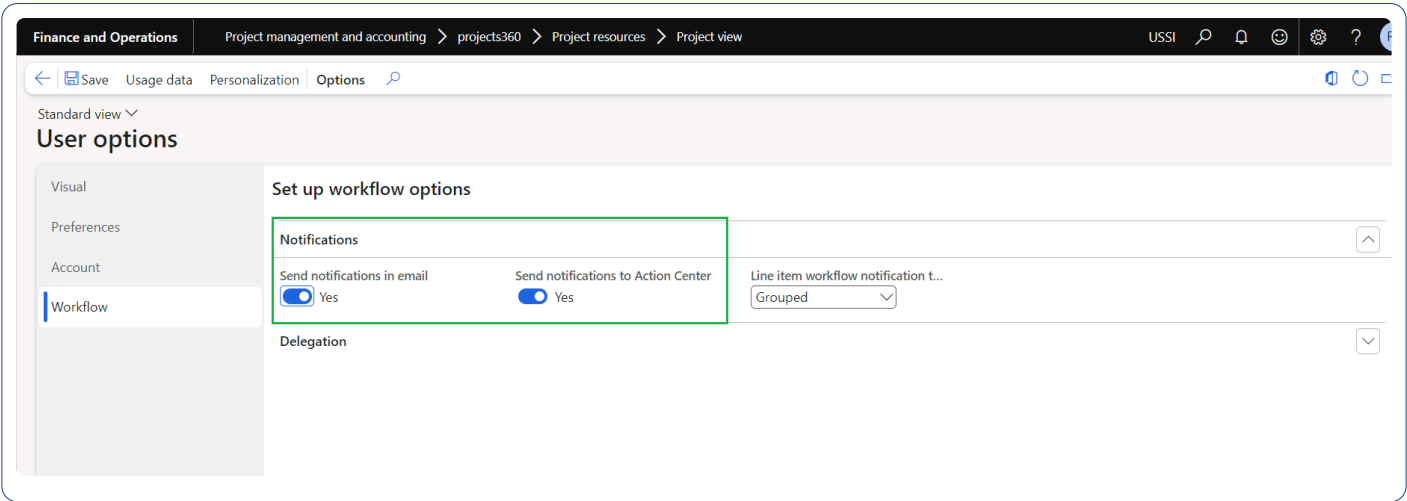

This enhancement introduces a valuable capability for users to filter and sort records based on the Role

ID within the resource forecast and project view forms. This is particularly beneficial for multi-disciplinary firms; this feature addresses the challenge of randomly organized line items. This enhancement eliminates concerns related to disorganized information and enables users to efficiently manage and view data in a structured manner.

HR automated events

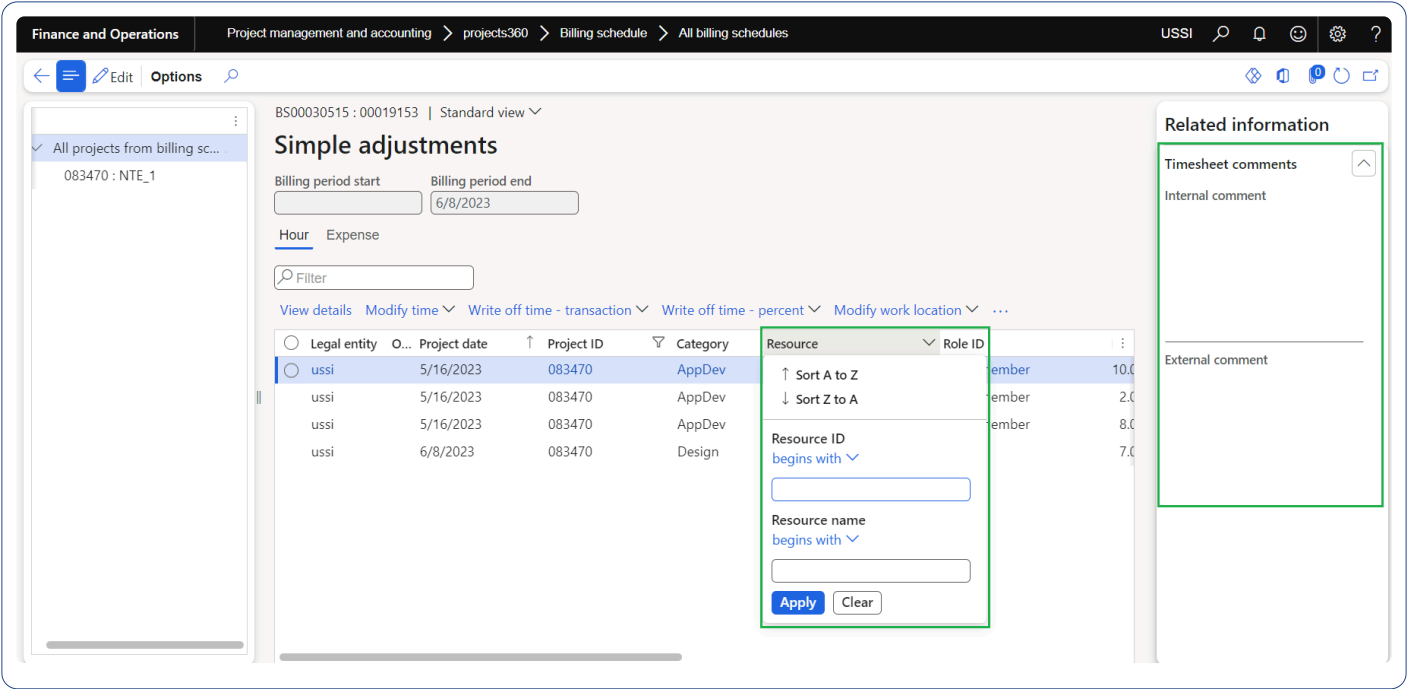

This enhancement automates the updating of email provider ID and workflow notification options when a user is created through the HR automated process. By eliminating the need for manual intervention, this enhancement significantly reduces the amount of time and effort required to update these settings for each new user in the system.

Simple adjustments

In this enhancement, “Resource” and “Role Id” fields have been made filterable on the “Simple adjustments” form opened from billing schedule form. This improvement allows users to filter transactions based on resource and perform adjustments more efficiently. It simplifies the process of performing adjustments by narrowing down the transactions to those directly relevant to the selected resource or role.

In this enhancement, we have also introduced fact box to display timesheet Internal/External comments for hour transactions on simple adjustment form.

Expense line level approval

In this enhancement, the customer name is displayed on the expense line level approval form from the project when the project contract involves multiple funding sources. This feature is enabled by the parameter “Show for multiple funding source,” allowing users to have greater visibility and clarity regarding the customer associated with each expense.

Adjustment requests

In this enhancement, we have introduced fact box to display timesheet Internal/External comments for hour transactions on Adjustment requests form.

Cash basis for intercompany transactions

Intercompany Accounts receivable compatibility

The recent enhancements implemented in the cash basis accounting feature have now made it compatible with accounts receivable intercompany transactions. Previously, intercompany accounts receivable transactions were not updating the cash layer, leading to inconsistencies between the current layer and the cash layer. The cash basis accounting feature now ensures that intercompany accounts receivable transactions properly update the cash layer, resulting in improved accuracy and alignment between the current layer and the cash layer. This enhancement now supports the scenarios where customer invoice payment done when using “centralized” payments.

Intercompany general ledger dual posting

In addition to the previous enhancements, the cash basis accounting feature has been further enhanced to accommodate the “dual posting” option on general journals. With this enhancement, when intercompany transactions are involved, the CURRENT layer transactions correctly post in both the local legal entity and the intercompany legal entities. With this enhancement, now the entries for these intercompany transactions are created in CASH layer as well ensuring that the cash basis accounting remains consistent in intercompany and non-intercompany scenarios.

Workspaces

In the latest Microsoft Dynamics 365 for Finance and Operations the dashboards have been replaced with Workspaces. Workspaces are used to create a quick access space to complete commonly used tasks, activities, and reports/inquiries. These workspaces are also mobile friendly and operate as tiles similar to other Microsoft applications.

Microsoft Dynamics 365 for Finance and Operations comes pre-loaded with several workspaces. However, individual users do have the ability to create their own workspaces, eliminating the need for development or customization to configure. With workspaces, you can get a bird's eye view of all your business processes and tasks in one central location, with quick links to commonly used operational and business functions, improving the efficiency and productivity of users. Also, Power BI can be embedded into your workspaces providing up-to-date views of your business.

Some of the projects360 workspaces are as follows. Select the links below to know more about specific workspace:

[Project Management](#)

[Sales & Marketing](#)

[Project Tasks](#)

[Global Project Administration](#)

[Project Accounting](#)

[Project Status](#)

[Resource Management](#)

Select a feature to view more details about them.

Introduction

This section deals with the workspaces available out-of-the-box in the projects360 suite. These workspaces are role specific and based on the logged in user's role.

Workspace

Workspaces is a new concept in Microsoft [Dynamics 365 for Finance and Operations](#), where this page is role specific and based on their roles, all the functionalities available for that role with respect to the module is available. For example, a Project manager would be more interested in his project timesheets, ability to create a new project, or review his transactions, so all of this is grouped into one workspace. Workspaces can be used to launch multiple pages from one place.

Workspace parameters

Parameters settings are required for few Tiles which can be defined on the projects360 parameters.

Form name	Hierarchy
My employee missing timesheet	Report to position
My resources PTO request	Report to timesheet appr...
My resource list	Report to timesheet appr...
My employee PTO balances	Report to timesheet appr...
Utilization by resource	Report to timesheet appr...

Buttons	Description
Form name	Displays all the form for which the data can be viewed based on Hierarchy.

Hierarchy	There are 2 options 'Report to position' and 'Report of timesheet approver'. Based on the option selected data will be displayed on the Tile/List.
-----------	--

Sections of a Workspace

A typical Workspace can have the following sections as listed below:

- 1. Tiles section** – Generally gives some statistical data. It either gives the count of the records or the information that the tile holds or allows the user to launch a list page or the related form to see more details.
- 2. List page section** – This section is where several list pages and its related information is displayed. Above the list page are the buttons related to the list using different actions that can be performed or that can be navigated to another form.
- 3. Action pane buttons** – Using these buttons, the users can create new records such as a new project in PM workspace, new timesheets in Project tasks workspace, etc., or open the list pages or related forms to see more details.
- 4. Power BI Section** – This is a place where all the [Power BI](#) reports related to the role this workspace has access to are displayed. Users can embed Power BI into workspaces and get up-to-date and favorite reporting visualization of their business.
- 5. Links and Help section** – This section contains all the help information or related help for the kind of data and information displayed on the workspace.

projects360 Workspaces:

The workspaces built as part of projects360 are as follows, select the links provided below to know more about a specific workspace:

Manage Projects

The Manage Projects workspace is available to provide Project managers a faster experience to access common functions and information for the role. The ribbon bar has been rearranged with a focus on Project setup, Budgeting, Resourcing, and Invoicing, with key buttons from each of these features on the first tab.

Manage projects grid

When the project manager logs into the 'Manage projects' dashboard, he/she can view all the projects assigned to him/her including the inter-company projects. We have provided a filter to view all the projects other than the assigned ones to logged in user through 'Show all projects' checkbox.

The fields on the grid has been rearranged to view the projects based on the customer name and added 'Project group' and 'Fee type' to understand the nature of the project we are dealing with.

The screenshot shows the 'Manage projects' grid in the Finance and Operations workspace. The grid is titled 'My view' and has a 'Show all projects' checkbox. The grid contains the following data:

Customer name	Project ID	Project name	Legal entity	Project contract ID	Project group	Fee type	Project stage
Active Transport Inc.	00000280.01	InvEmSubprojecy	ussi	00000230	T&M	None	Created
Active Transport Inc.	Inv trans	Invoice translation	ussi	00002180	TM_WIP	None	Released
Alpine Electronics	00001833	Invoice email	ussi	00000028	TM_WIP	None	Released
Certified Bicycle Supply	00000481	DDRS	ussi	00000404	T&M	None	Released
City Manufacturing	00000256	InvoiceArch	ussi	00000001	T&M	None	Released
Cycles Wholesaler & Mfg.	00000088	Test	gbsi	00000002	TM_NoWIP	None	In process
Eastside Department Store	00000929	Timesheet DDR	ussi	00000007	T&M	None	Released

Details of the fields available on the Manage projects grid are as follows –

Manage projects tab

All the action pane buttons which are related to key actions are placed on the 'Manage project' action pane tab.

The screenshot shows the 'Manage projects' tab in the 'Finance and Operations' application. The top navigation bar includes 'Finance and Operations' and a search bar. Below the navigation bar, there are several tabs: 'NEW', 'ACTIVITIES', 'MAINTAIN', 'HOURS SALES PRICE', 'VALIDATION', 'BUDGETING', and 'RELATED INFORMATION'. The 'NEW' tab is selected, showing options like 'Subproject', 'Copy project', and 'Manage subprojects'. The main area displays a table of projects with columns: Customer name, Project ID, Project name, Legal entity, Project contract ID, Project group, Fee type, and Project stage. The table lists several projects, including 'Active Transport Inc.', 'Alpine Electronics', 'Certified Bicycle Supply', 'City Manufacturing', 'Cycles Wholesaler & Mfg.', and 'Eastside Department Store'.

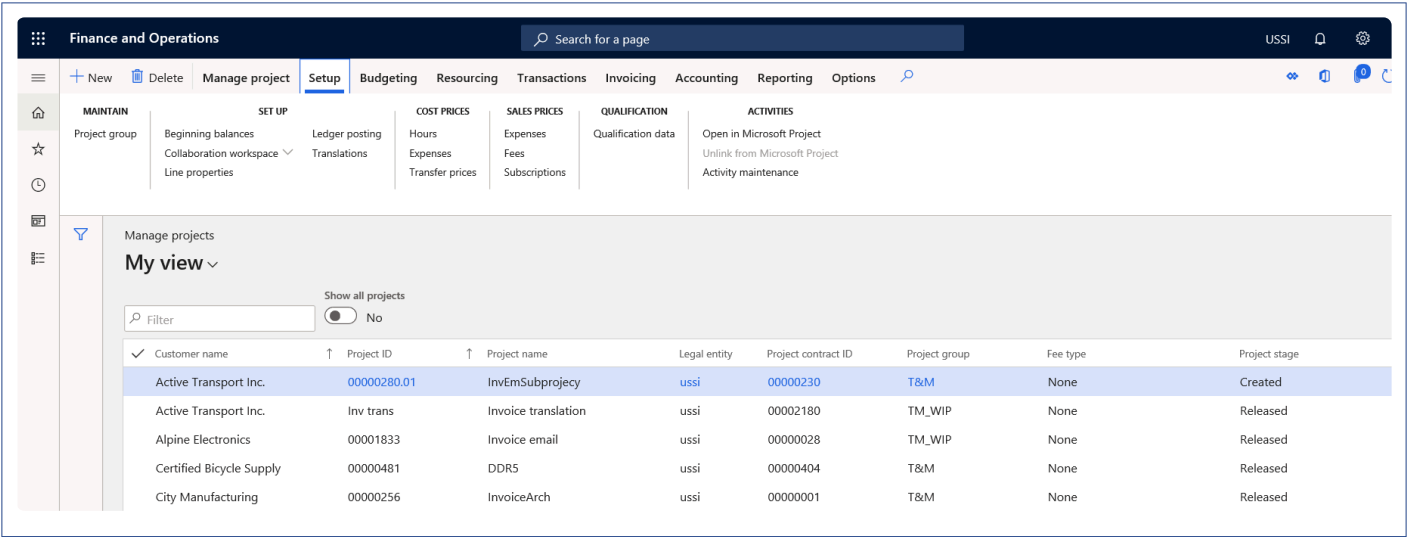

Details of the buttons available on the Manage projects tab are as follows –

Budgeting tab

All the action pane buttons which are related to the forecast and budgeting are placed on the 'Budgeting' action pane tab.

The screenshot shows the 'Finance and Operations' application interface. The top navigation bar includes tabs for New, Delete, Manage project, Setup, Budgeting, Resourcing, Transactions, Invoicing, Accounting, Reporting, and Options. The 'Budgeting' tab is selected, showing a list of actions under various categories: ACTIVITY (Update planned value forecast, Update earned value forecast, Update estimate to complete forecast), BUDGET (Project budget), ITEM REQUIREMENTS (Item requirements, Transfer from quotation, Transfer from WBS estimates), FORECAST (All forecasts, Item forecasts, Copy forecasts, Transfer from quotation, Hour forecasts, Fee forecasts, Copy forecasts to ledger, Transfer from WBS, Expense forecasts, On-account forecasts, Delete forecasts), and UNIT BILLING (Unit billing forecast).

Below the action list is the 'Manage projects' section, which includes a 'My view' dropdown and a table of project data. The table has columns for Customer name, Project ID, Project name, Legal entity, Project contract ID, Project group, Fee type, and Project stage. The data rows are as follows:

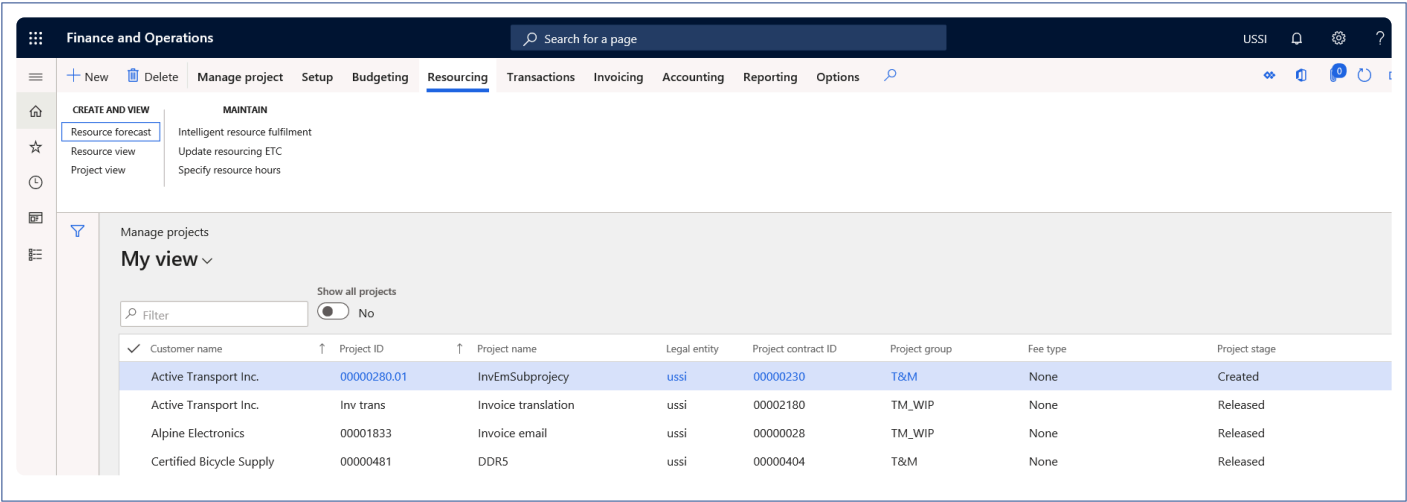

Customer name	Project ID	Project name	Legal entity	Project contract ID	Project group	Fee type	Project stage
Active Transport Inc.	00000280.01	InvEmSubproject	ussi	00000230	T&M	None	Created
Active Transport Inc.	Inv trans	Invoice translation	ussi	00002180	TM_WIP	None	Released

Accounting tab

All the action pane buttons which are related to adjustment and Fee/contract management are placed on the ‘Accounting’ action pane tab.

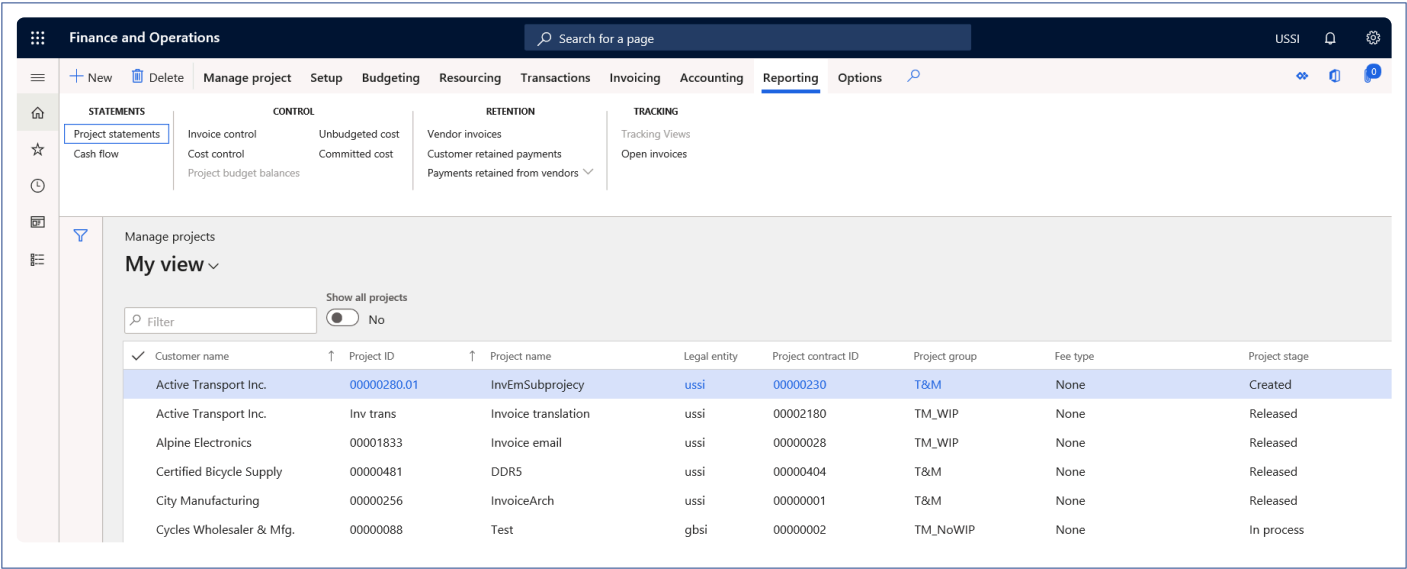

Details of the button available on the Accounting tab are as follows –

Button	Description
Adjust transactions	Existing button pulled from projects form.
Post costs	Existing button pulled from projects form.
Index subscription	Existing button pulled from projects form
Estimates	Existing button pulled from projects form
Accrue revenue	Existing button pulled from projects form.
Revenue adjustments	Existing button pulled from projects form
NTE adjustment	Existing button pulled from projects form.
Percentage complete adjustment	Existing button pulled from projects form
Contract management	Existing button pulled from projects form.

Reporting tab

All the action pane buttons which are related to inquiries and reporting are placed on the ‘Reporting’ action pane tab.

Details of the button available on the Reporting tab are as follows –

Button	Description
Project statements	Existing button pulled from projects form.
Cash flow	Existing button pulled from projects form.
Invoice control	Existing button pulled from projects form
Cost control	Existing button pulled from projects form
Project budget balances	Existing button pulled from projects form.
Unbudgeted cost	Existing button pulled from projects form
Committed cost	Existing button pulled from projects form.
Vendor invoices	Existing button pulled from projects form
Customer retained payments	Existing button pulled from projects form.
Payments retained from vendors	Existing button pulled from projects form
Tracking views	Existing button pulled from projects form.
Open invoices	Existing button pulled from projects form

Timesheet

Intent of this Workspace

This workspace is intended for the project timesheets users. This task based workspace allows users to quickly navigate to manage pending time, timesheet and forms where timesheet related information can be configure or viewed. Also, there are few metrics on this workspace which helps us to analyze our own utilization data. The delegate functionality has been enabled on this form to quickly view and take actions for the people you are delegated to.

1. My timesheets

This section lists out all the recent timesheets for the logged in resource or the selected resource. These timesheets will be arranged in descending order by date. There are navigation buttons on top of the grid to enable quick navigation to the relevant forms. Details of some of the navigation options provided are as follows –

Buttons	Description
New Timesheet	Allows to quickly create timesheet by directly opening the new timesheet slide out form.
Manage	Allows to quickly open the manage pending time form, this button will not be visible for the

pending time	delegated resource.
Manage activities	Allows to quickly open my project activities form, this button will not be visible for the delegated resource.
Chat with time approver	Allows to chat with the time approver for the selected line.

2. My time summary

This section shows the time entered by the logged-in or selected resource in various statuses. This visual picks the time from manage pending time and timesheets form. There are 2 options available on the drop-down on top of visual and can be selected to see the time entered for current or previous weeks. Also if you navigated to another form and coming back on this form, refresh button can be used to quickly refresh the visual.

The legends at the bottom of the visual can be clicked to turn them on or off, hence these legends can be utilized as filters to see data in different statuses.

3. Utilization summary

This is a configurable visual showing the utilization data in four different boxes. Each box can be configured to show up on this form. Users need to setup the date interval codes on the timesheet parameters form in order to calculate and display data on this form. The number of boxes display here depends on how many is configured on the parameter as shown in the below visual.

3. Utilization chart

This visual shows the utilization data in a line graph for the logged-in or the selected resource. By default, the utilization data for last 12 months is shown here. A checkbox to turn off this visual is provided in the parameter as shown in the below visual.

The parameters for section 3 and 4 can be configured on the following location

Go to Timesheets > Setup > Timesheet parameters

Project Management

Intent of this Workspace

This workspace is intended for the Project manager or project accountant roles, where the user will be able to review and act upon the items that they are expected to do in [Microsoft Dynamics 365 finance and operations](#).

The PM can create a project, copy projects and review all the transactions that are posted and pending to be posted on the project. Users having the role of Service industry super user, Service industry view role, Project accountant and Project manager can access this workspace.

1. Tiles Section

Tiles	Description
Work items assigned to me	All kinds of documents waiting for the logged in user's approval are listed on this tile. The documents include timesheets, expense reports, invoice proposals, etc.
My open invoice proposals	All the invoice proposals created by the logged in user and are in unposted state are listed on this tile.
Timesheet line level approval	All the timesheets configured for line level approval and logged user defined as approver are listed on this tile.
My project view	Shows the details of each project where the logged in user is assigned as project manager. Details shown here are in terms of the project summary and project hours
My open invoices	All the invoices created and posted by the logged in user are listed on this tile. Payments for these invoices are still outstanding. This tile is updated once the Invoice aging snapshot process is run.

Timesheet approvals assigned to me	All the timesheets assigned or delegated to the logged in user for approval are listed on this tile.
Expense reports assigned to me	All the expense reports assigned or delegated to the logged in user for approval are listed on this tile.
My project missing timesheets	All the timesheets missing i.e. not submitted by the resources assigned in the projects where the logged in user is defined as Project manager are listed on this tile.

2. List Page Section

List page	Description
My projects	List shows all the projects where the logged in user is assigned as the project manager.
My posted project transactions	All the posted transactions for the projects where logged in user is designated as project manager are listed on this tile. Posted transactions include fee, hour, expense, on-account and item types.
My pending project transactions	All the unposted transactions for the all the projects where logged in user is designated as project manager are listed on this tile. Posted transactions include fee, hour, expense, on-account and item types.

3. Power BI Section

Dynamics 365 for Finance and Operations offers the ability to pin [Power BI](#) visuals into workspaces, an important functionality that seamlessly integrates two important business management systems in one platform. The workspace is the place where the user interacts with Dynamics 365 system for operations tasks. In order to more efficiently carry out the task, pinning Power BI visuals provides instant insight without having to toggle between systems.

This section shows all the Power BI visuals pinned by the users to this workspace.

4. Links & Help Section

Links & Help	Description
All customers	Opens up the all customers list page.
All contracts	Opens up the project contracts list page.

All projects	Opens up the all projects list page.
Pending project transactions	Opens up the pending projects transaction list page, where all the pending transactions are displayed.
Posted project transactions	Opens up the posted projects transaction list page, where all the posted transactions are displayed.
Hour	Opens up the hour transactions list page, showing all the hour transactions posted as well unposted.
Expense	Opens up the expense transactions list page, showing all the expense transactions posted as well unposted.
Item	Opens up the item transactions list page, showing all the item transactions posted as well unposted.
Fee	Opens up the fee transactions list page, showing all the fee transactions posted as well unposted.
On-account	Opens up the on-account transactions list page, showing all the on-account transactions posted as well unposted.

5. List of Buttons

The below mentioned buttons are available on the selection of My projects list page on the workspace.

Button	Description
New projects	Use this button to create new projects from the workspace. Clicking on this button will open up the new project creation form. When the UI control parameter is set to True on projects360 integration parameters, then new projects button will redirect to PSA environment to create new project.
Copy projects	Use this button to copy existing projects to create new projects from the workspace. Clicking on this button will open up the copy project wizard form.
Project status	Use this button to switch from project management workspace to project status workspace seamlessly. The Project status workspace opens with details of the project selected on the project management workspace.
WBS maintenance	Opens up the WBS maintenance form for the project selected in the My projects list page.
Resource forecast	Opens up the resource forecast form for the project selected in the My projects list page.
Project view	Opens up the project view form for the project selected in the My projects list page.

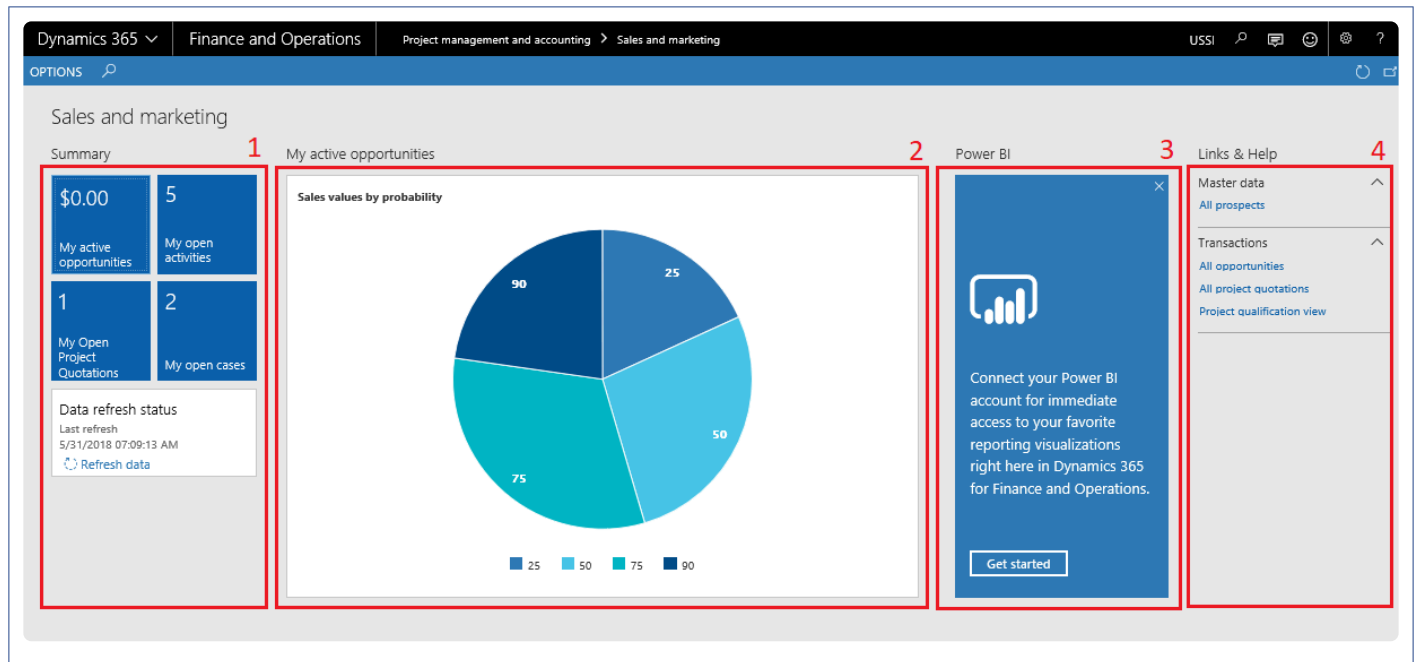

Intelligent resource fulfilment	Opens up the Intelligent resource fulfilment form for the project selected in the My projects list page.
Resource view	Opens up the resource view form for the project selected in the My projects list page.
Activity maintenance	Opens up the Activity maintenance form for the project selected in the My projects list page.

Sales and Marketing

Intent of this Workspace

This workspace is intended for the Sales manager and Service industry roles, that would be using the Sales and marketing module in [Microsoft Dynamics 365 for Finance and Operations](#).

The information on opportunities and project quotations will be available in this workspace. Project qualification data of a project also would be available on this workspace.

1. Tiles Section

Tiles	Description
My active opportunities	This tile lists all the active opportunities where the logged user is defined as the owner.
My open project quotations	This tile lists all the active project quotations where the logged user is defined as the responsible sales person.
My open activites	This tile lists all the open activities where the logged user is defined as the responsible party.
My open cases	This tile lists all the open cases where the logged user is defined as the responsible employee.
Data refresh	This tile shows when the last time data on this workspace was refreshed and allows the

status	users to refresh data.
--------	------------------------

2. Graph Section

The middle section on this workspace shows a graph for the 'My active opportunities'. This graph represents the information of each active opportunity in a pie format where the logged in user is assigned as the owner. Hovering on the pie share shows probability and estimated revenue information of the selected pie. On this pie chart, data is grouped based on the probability information entered against each opportunity.

3. Power BI Section

Dynamics 365 for Finance and Operations offers the ability to pin Power BI visuals into workspaces, an important functionality that seamlessly integrates two important business management systems in one platform. The workspace is the place where the user interacts with Microsoft Dynamics 365 for Finance and Operations system for operations tasks. In order to more efficiently carry out the task, pinning Power BI visuals provides instant insight without having to toggle between systems.

This sections shows all the Power BI visuals pinned by the users to this workspace.

4. Links & Help Section:

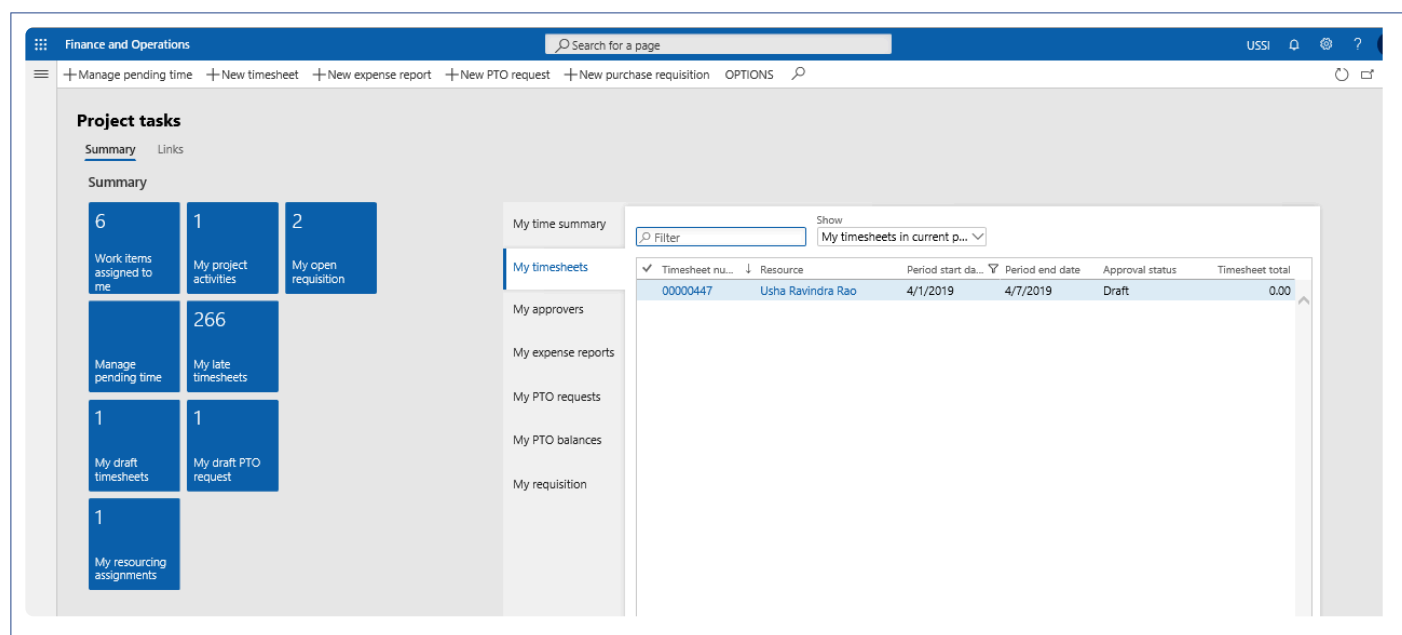

Links & Help	Description
All prospects	Opens up the All prospects list page.
All opportunities	Opens up the All opportunities list page.
All project quotations	Opens up the Project quotations list page.
Project qualification view	Opens the project qualification view page. To know about the project qualification, please refer the Quotation enhancements in this manual

Project Tasks

Intent of this Workspace

The intention of this workspace is to assemble most commonly used projects related tasks and information in one place. Any user associated with an employee, project timesheet user, Service industry super user or Service industry view role will have access to this workspace.

Manage pending time, new timesheet, new expense report, new PTO request and new purchase requisition can be directly created from this workspace using the action buttons provided at the top the workspace.

1. Tiles Section

Tiles	Description
Work items assigned to me	All kinds of documents waiting for the logged in user's approval are listed on this tile. The documents could be a timesheets, expense reports, invoice proposals etc.
My late timesheets	For the all the periods where timesheets for the logged in user is not available are listed in this tile.
My draft PTO requests	All the PTO requests which are in draft status submitted by the logged user are displayed under this tile.
My open requisition	All the requisitions created/submitted by the logged in user and are in the draft status are displayed under this tile.
My project	This tile lists all the project activities where the logged user is defined as the responsible.

activites	
My draft timesheets	All the timesheets created by the logged user and are in draft status are displayed under this tile.
My resourcing assignments	Shows the resource summary and the projects against which the logged in user is booked.
Manage pending time	Shows the resource pending time details of the logged in user.

2. List Page Section

List page	Description
My time summary	Shows graphical representation of the Pending, Draft, In review and Approved timesheets for the current and pervious week based selected option.
My timesheets	List shows all the timesheets with different statuses created by the logged in user. By default the selection is for the current period timsheet. User can change the dropdown to see timesheets for different periods and projects.
My approvers	List shows the approver assigned to the logged in user for different document types mainly timesheet, expense and requisition approvers.
My expense reports	List shows all the expense reports submitted by the logged in user.
My PTO requests	List shows all the PTO requests submitted by the logged in user.
My PTO balances	List shows the PTO balances for the logged in user as on a particular date mentioned as last column on the grid.
My requisition	List shows all the requisition submitted by the logged in user.

3. Links & Help Section

Links & Help	Description
My timesheets	Opens up the my timesheet list page showing all the timesheets with different statuses created by the logged in user. By default the selection is for the current period timsheet. User can change the dropdown to see timesheets for different periods and projects.
Delegates	Opens up the My delegates page where delagated tasks for the logged in user can be seen.
Favorites	Opens up the My favorites page where all the favorites added by the logged in user can be

	seen.
Approval out of office delegation	Opens up the user options page where the logged in user can setup the delegation information.

4. List of Buttons

The below mentioned buttons are available on the selection of My project tasks list page on the workspace.

Button	Description
Manage pending time	Use this button to create new pending time from the workspace. Clicking on this button will open up the manage pending time creation form.
New timesheet	Use this button to create new timesheets from the workspace. Clicking on this button will open up the new timesheet creation form.
New expense report	Use this button to create new expense reports from the workspace. Clicking on this button will open up the new expense report creation form.
New PTO request	Use this button to create new PTO request from the workspace. Clicking on this button will open up the Personal timeoff creation form.
New purchase requisition	Use this button to create new purchase requisition from the workspace. Clicking on this button will open up the Create purchase requisition form.

Global Project Administration

Intent of this Workspace

This workspace is created with an intention to review the inter-company transactions. The global project administrator, service industry super user and service industry view roles are associated with this workspace. The users assigned with these roles will be able to view inter-company invoices information available on this workspace and also inter-company projects related transactions are available to the user across legal entities, even if the transactions are in draft status.

The information that is made available on this workspace is workflows pending, timesheets in review and timesheets pending etc. Even the projects360 Integration log is available on this workspace to view the integration status.

1. Tiles Section

Tiles	Description
Pending workflows	All the pending workflow documents are displayed under this tile. This tile considers all the document types for which workflow is defined.
Emails pending	All the emails under the waiting and failed statuses are listed under this tile. Again this shows all the document types for which emails could be configured and sent.
All missing timesheets	All the timesheets missing i.e. not submitted by the resources in the application are displayed under this tile.

Error workflows	This tile opens up the list page which shows all the workflows which are stopped due to some error.
Timesheet in review	This tile opens up the list page which shows all the timesheets which are in submitted and in-review state.
Integration error log	This tile opens up the list page which shows errors in Project Service Automation application (PSA) data integration to Microsoft Dynamics 365 finance and operations.

2. List Page Section

List page	Description
All pending intercompany	This list displays all the intercompany transactions. These transactions could be from timesheet, expense management and vendor invoice document types.

3. Power BI Section

[Dynamics 365 for Finance and Operations](#) offers the ability to pin Power BI visuals into workspaces, an important functionality that seamlessly integrates two important business management systems in one platform. The workspace is the place where the user interacts with [Dynamics 365](#) system for operations tasks. In order to more efficiently carry out the task, pinning Power BI visuals provides instant insight without having to toggle between systems.

This sections shows all the Power BI visuals pinned by the users to this workspace.

4. Links & Help Section

Links & Help	Description
Error workflows	This tile opens up the list page which shows all the workflows which are stopped due to some error.

5. List of Buttons

The below mentioned buttons are available on the selection of All pending inter-company list page on the workspace.

Button	Description
--------	-------------

Open related transactions	Opens up the details of the selected record under the All pending inter-compnay list page.
---------------------------	--

Project Accounting

Intent of this Workspace

The information provided on this workspace is mainly around project accounting. Project invoices which are open, timesheets not posted and expenses that are still in review or just approved are some of the information made available on this workspace. The project accountant can also access the intercompany invoices too.

Users having the role of Service industry super user, Service industry view role and Project accountant roles can access this workspace.

The screenshot shows the Dynamics 365 Project Accounting workspace. The top navigation bar includes 'Dynamics 365', 'Finance and Operations', 'Project management and accounting', and 'Project accounting'. The workspace is divided into four main sections:

- Summary (1):** A sidebar on the left containing seven tiles: 'Open invoice proposals' (25), 'Timesheets not submitted' (153), 'Timesheets in review' (8), 'Unposted timesheets' (21), 'Expense reports in review' (5), 'Approved expense reports' (1), and 'Projects with created status' (63).
- Main Content Area (2):** A table titled 'Opens related transactions' with columns: Lending, Borno, Transaction, Reference nu., DocStatus, Project, Worker, Project date, Qty, Transfer curr., and Transfer price. The table lists various transactions, including Vendor inv., Expense ma., and Timesheet, with details on their status and associated project/worker information.
- Power BI (3):** A sidebar on the right with a 'Get started' button and a message: 'Connect your Power BI account for immediate access to your favorite reporting visualizations right here in Dynamics 365 for Finance and Operations.'
- Links & Help (4):** A sidebar on the right with links to 'Invoicing', 'Timesheet', 'Journals', 'Hour', 'Expense', 'Item', 'Fee', 'Adjust transactions', 'Periodic', 'Estimate to complete', 'Earned value', and 'Update resourcing ETC'.

1. Tiles Section

Tiles	Description
Open invoice proposals	This tile displays all the invoices proposals which are in status other than the cancelled and invoiced.
Timesheets in review	This tile displays all the timesheets which are in-review status.
Expense reports in review	This tile displays all the expense reports which are in-review status.

Projects with created status	This tile displays all the projects which are created status.
Timesheets not submitted	This tile displays all the timesheets which are either in the not created or draft status.
Unposted timesheets	This tile displays all the timesheets which are approved status but not yet posted.
Approved expense reports	This tile displays all the expense reports which are approved status.

2. List Page Section

List Page	Description
Pending inter-company in	This list displays all the incoming intercompany transactions i.e. borrowing company is the logged in company. These transactions could be from timesheet, expense management and vendor invoice document types.
Pending inter-company out	This list displays all the out going intercompany transactions i.e. lending company is the logged in company. These transactions could be from timesheet, expense management and vendor invoice document types.
Project invoices	This list displays all the project invoices in various statuses.
All open projects	This list displays all the projects in open status i.e. projects which are not in finished\closed state.
All contracts	This list displays all the contracts created in the application for the logged in legal entity.
All customers	This list displays all the customers created in the application.

3. Power BI Section

Microsoft Dynamics 365 for Finance and Operations offers the ability to pin Power BI visuals into workspaces, an important functionality that seamlessly integrates two important business management systems in one platform. The workspace is the place where the user interacts with Dynamics 365 system for operations tasks. In order to more efficiently carry out the task, pinning Power BI visuals provides instant insight without having to toggle between systems.

This sections shows all the Power BI visuals pinned by the users to this workspace.

4. Links & Help Section

Links & Help	Description
Inter-company customer invoice	Opens up the inter-company customer invoices form for the user to see all the inter-company customer invoices created.
Create project invoice proposals	Opens up the create invoice proposal form for the user to create the invoice proposal for a single or multiple projects together.
Project invoice proposal	Opens up the project invoice proposals form for the user to see all the invoice proposals created in the application and status they are currently in.
Project invoices	Opens up the project invoice form for the user to see all the project invoices created in the application and other details around these invoices.
Pending vendor invoices	Opens up the pending vendor invoices list page to view and take action on vendor invoices that have not yet been posted.
All missing timesheets	Opens up the All missing timesheets. This list page shows all the timesheets that have not been submitted by the resources in the application are displayed on this tile.
Hour journals	Opens up the hour journals list page, showing all the hour journals posted as well unposted. By default the form will display the unposted journals, user can change the filter on the form to see posted journals.
Expense journals	Opens up the expense journals list page, showing all the expense journals posted as well unposted. By default the form will display the unposted journals, user can change the filter on the form to see posted journals.
Item journals	Opens up the item journals list page, showing all the item journals posted as well unposted. By default the form will display the unposted journals, user can change the filter on the form to see posted journals.
Fee journals	Opens up the fee journals list page, showing all the fee journals posted as well unposted. By default the form will display the unposted journals, user can change the filter on the form to see posted journals.
Adjust transactions	Opens up the adjustments form for user to create adjustment transactions. User can use filters to create adjustments for a specific project.
Estimate to complete	Opens up the estimate to complete process form to allow the user to run the process from this workspace.
Earned value	Opens up the earned value process form to allow the user to run the process from this workspace.
Update resourcing ETC	Opens up the update resourcing ETC process form to allow the user to run the process from this workspace.

5. List of Buttons

The below mentioned buttons are available on the selection of Pending inter-company in list page on the workspace.

Button	Description
Open related transactions	Opens up the details of the selected record under the All pending inter-company list page.

The below mentioned buttons are available on the selection of Pending inter-company list page on the workspace.

Button	Description
Open related transactions	Opens up the details of the selected record under the All pending inter-compnay list page.

The below mentioned buttons are available on the selection of All open projects list page on the workspace.

Button	Description
Open in PSA	If the selected project in the list is integrated from PSA, then this button provides you the ability to navigate to that record in the PSA environment.
Project budget	This button opens up the project budget form to see and set up the project budget for the selected record on the list page.
Create invoice proposal	Opens up the create invoice proposal form to create the invoice proposals. User has to select project and project contract to create an invoice proposal.
Adjust transactions	Opens up the adjustments form for user to create adjustment transactions. User can use filters to create adjustments for a specific project.

The below mentioned buttons are available on the selection of All contracts list page on the workspace.

Button	Description
Open in PSA	If the selected contract in the list is integrated from PSA, then this button provides you the ability to navigate to that record in the PSA environment.
Create invoice proposal	Opens up the create invoice proposal form to create the invoice proposals. User has to select project and project contract to create an invoice proposal.
Adjust transactions	Opens up the adjustments form for user to create adjustment transactions. User can use filters to create adjustments for a specific project.

The below mentioned buttons are available on the selection of All customers list page on the workspace.

Button	Description
Quotations	Opens up the All quotations form to view the quotation information associated with the selected record.
Projects	Opens up the All Projects form to view the projects information associated with the selected record.
Transactions	Opens up the customer transactions form and shows the information associated with the selected record.
Project invoice	Opens up the project invoices form and displays the project invoices against the selected record.
Statements	Opens up the project statements form and displays the project statements against the selected record.
Open in PSA	If the selected customer in the list is integrated from PSA, then this button provides you the ability to navigate to that record in the PSA environment.

Project Status

Intent of this Workspace

This workspace is intended for the Project manager or project accountant roles, where the user will be able to review and act upon the items that are expected to be done in [Microsoft Dynamics 365 for Finance and Operations](#). Users having the role of service industry super user, service industry view role, project accountant and project manager can access this workspace.

Using this workspace, the project accountant can create project transactions and bill the customer using invoice proposal, Project adjustment and Project purchase order and view the posted transaction for all transaction types against the project selected in drop-down list.

Project accountant can view the project details in PSA environment using “Open PSA” button if available project has been integrated from PSA application.

1. Tiles Section

Tiles	Description
Manage WBS	Using Manage WBS button user can create or edit the WBS line for selected project.
Effort tracking on WBS	Effort tracking on WBS Tiles will allow user to view project cost and effort tracking views that enable project accountant to keep on top of the progress for selected project.
Open Invoices	Open invoices displays the list of outstanding invoices list that shows the Customer details and the due date of payment.
Intelligent resource	Account manager can view and assign the resource onto the selected project line, after matching the skill set of the required role of the resource.

fulfilment	
Activity maintenance	Using activity maintenance form, a project accountant can enter manually the activity code and Update financial dimensions in one shot by selecting multiple activity records. Activity records will be available as soon as the work breakdown structure is published for the very first time.
Resource forecast	Project manager/Project accountant can plan for resources who are required to complete the selected project, this tile shows the project resource plan budget.
Project view	Project view will display the current project's project view details, which is the list of planed and named resources booked on the project.
Resource View	Resource view form will display all assigned planed and named resource list for selected project, which will allow user to book soft and hard book time for the resource.
Project budget	Project budget will display the forecast budgeted project cost and revenue line which can control actual project transactions. Using project budget, an accountant can revise the budget if required.
Pending transaction	Pending transaction tiles will display all pending project transactions posted against the selected project. The user can create project transactions using journals button on pending project transaction form.

2. List Page Section

List Page	Description
Hour transactions	Hour transaction displays all the hours transactions posted for the selected project and user can to filter the transaction on all status'. This list shows the details of posted hour transactions.
Expense transactions	Expense transaction shows the list of expense transaction posted for selected project with different status. User can view all transaction details in general tab of the records.
Item transactions	Item transactions shows the list of all the item related transactions posted for selected project. User can view all transaction details in general tab of the records.
Fee transaction	Fee transactions shows the list of all the Fee related transactions posted for selected project. Users can view all transaction details in general tab of the records.
On-account transactions	On-account transactions list shows the list of all posted Milestone and prepayment transactions list of the selected project. Users can view all transaction details in general tab of the records.
Assign resources	User can view the list of the resources which is assigned to the selected project.

Assign categories	Users can view the list of the category which is assigned to the selected project.
-------------------	--

3. Power BI Section

Dynamics 365 for Finance and Operations offers the ability to pin Power BI visuals into workspaces, an important functionality that seamlessly integrates two important business management systems in one platform. The workspace is the place where the user interacts with Microsoft Dynamics 365 for Finance and Operations system for operations tasks. In order to more efficiently carry out the task, pinning Power BI visuals provides instant insight without having to toggle between systems.

This sections shows all the Power BI visuals pinned by the users to this workspace.

4. Links & Help Section

Links & Help	Descriptions
Assign resources	Using assigned resource link, a user can add the resource into the project and added resources will display in assigned resource list.
Assign categories	Using assigned category link, a user can add the categories into the project and added categories will display in assigned categories list.
Assign work location	Using this button, a user can assign a work location to a project to default into the project timesheet records.
Estimates	Using estimates button, users can view existing estimate and create new estimates for selected project.
Committed cost	Committed cost shows the list of committed cost lines on the selected project.
Purchase orders	Using this button, a user can view all existing purchase orders and create new purchase orders.
Purchase requisitions	Using this button, a user can view all existing purchase requisitions and create new purchase requisitions.
Item requirements	Using this button, a user can view all existing item requirements and create new Item requirements.
Expense	Using the expense button, a user can create expense journals for the selected project.
Item	Using the item button, a user can create item journals for the selected project.
Fee	Using the fee button, a user can create fee journals for the selected project.
Hours	Using the hour button, a user can view the sales price for the selected project and can

	create new sales price if required.
Expenses	Using the expense button user can view the sales price for the selected project and can create new sales price if required.
Fees	Using the fee button, a user can view the sales price for the selected project and can create new sales prices if required.
Project statements	Using the project statement button, a user can have view the progress of the project.
Invoice Control	Using the cost control form, a user can calculate and view posted transactions. A posted transaction provides an overview of the amounts that have been invoiced and the amounts that remain to be invoiced.
Cost Control	Using this option, a user can control the cost that the organization incurs during project life cycle.
Qualification data	Users can view the qualification data which is associated with the Selected project.
Resource view	Using the resource view form, a user can view all the resources which are associated with the project and display the list of projects that the resource is booked on.

Resource Management

Intent of this Workspace

This workspace is intended for the resource manager roles, where the user will be able to review and act upon the items that are expected to be done in [Microsoft Dynamics 365 for Finance and Operations](#).

The resource management workspaces allow the resource managers to view all the inter-company and non-Inter-company planned resource and named resource line. and based on resource competencies, find a matching resource and map with project competencies to schedule them into the project resource plan budget.

Users having the role of service industry super user, service industry view and resource manager role can access this workspace.

Resource name	Resource ID	Sales price	Cost price	Worker type	Calendar	Period types	Source leg

1. Tiles Section

Tiles	Description
Resource list	Resource list displays a count of all the resources in the current legal entity, Resource manager can define a role and required competencies for a resource, so that it's easy to match resources.
Intercompany	Intercompany resource list displays a count of all the resources other than current legal

resource list	entity, Resource manager can define a role and required competencies for a resource.
My resource list	My resource list displays the list of the records of resources for whom the logged in user is the approver or reports to position worker based on the parameters. Resource managers can define a role and required competencies for the resources using this tile.
My employee missing timesheet	My employee missing timesheet displays the list of All missing timesheets and displays the records of employee's timesheets for whom the logged in user is the timesheet approver or reports to position worker based on the parameters.
Intelligent resource fulfilment	Resource manager can view and assign the resource onto the selected project line, after matching the skill set of the required role of the resource.
My resource view	My resource view displays the list of the planned as well as named resources booking for whom the logged in user is the approver. Resource manager will be able to view and book them in this form
My resource PTO request	Resource manager can have access and view the Personal time off request for resource to whom the logged in user is the timesheet approver or reports to position worker based on the parameters.
Planned resource	Planned resource displays the list of planned resource line which is assigned to project but there is no resource are assigned to the resource forecast line.
Named resource	Name resource form displays the booking of resources across projects. Resource managers will be able to view all the resources and the work assigned to them in this form.

2. List Page Section

List Page	Description
Resource role	Resource role list page displays all the resources and It also has the sales price, cost price, worker type, calendar, period types, and source legal entity. Logged in user can open the resource list form clicking on hyper link of resource name field and define a role required competencies for the selected resource.
My employee PTO balance	List shows the PTO balances for the resources for whom the logged in user is defined as the approver or reports to position worker based on the parameters. PTO balances displayed are as of a particular date mentioned as last column on the grid.

3. Power BI Section

Dynamics 365 for Finance and Operations offers the ability to pin Power BI visuals into workspaces, an important functionality that seamlessly integrates two important business management systems in one

platform. The workspace is the place where the user interacts with Microsoft Dynamics 365 for Finance and Operations system for operations tasks. In order to more efficiently carry out the task, pinning Power BI visuals provides instant insight without having to toggle between systems.

This sections shows all the Power BI visuals pinned by the users to this workspace.

4. Links & Help Section

Links & Help	Description
Skill	Opens the page of skills and display all skills list.
Certificate	Opens the page of certificate types and displays all certificate list.
Role	Opens the resource role page and display all resource list.
Education	Opens the education disciplines page and displays the all education list.

5. List of Buttons

These buttons are available on the selection of Resource role list page on the workspace and not on My employee PTO balances.

Button	Description
Resource role	Use this button to define the roles that you want resources to fill in projects for your legal entity. Resource roles are descriptions of the primary types of tasks that a resource can perform during the project.
Skill	Using this form, resource managers can assign the skill set to the resource.
Certificate	Using this form, resource managers can assign the certificate detail to the resource as required.
Education	Using this form, resource managers can assign and update education details of the resource.
Intelligent work search	The Intelligent work search form can be used for looking up work for the selected resource, resource manager can check required competencies match with the resource and assign the project to the respective resource.

Project manager

Intent of this Workspace

This workspace is intended for the project managers where the users will be able to review the action items assigned and take necessary actions. Project managers will be able to view all his/her projects, open invoices, timesheets, expenses and PTO information. User will have access to and edit the personal information like address, Contact details, Personal contacts, Bank information etc.

The PM can approve the timesheet lines, expense report, invoice proposal etc. which are assigned to him. Also, PM can directly create new timesheet, new expense report, new PTO request. Users having the role of Service industry super user, Service industry view role, Project accountant, Project manager, AEC principle, AEC project accountant, AEC project manager can access this workspace.

The screenshot shows the 'Project Manager' workspace. On the left, there's a sidebar with a user profile for 'HelloRavindra Rao Usha' and several tiles showing counts for work items, expense reports, timesheet lines, prebills, adjustment requests, missing timesheet projects, and pending vendor invoices. The main area has tabs for 'Manage subprojects', 'Fee management', 'Contract management', 'Project invoice proposals', 'Project statements', and 'Resource forecast'. The 'Project statements' tab is active, displaying a table of project data.

1. Tiles Section

Tiles	Description
All work items assigned to me	All kinds of documents waiting for the logged in user's approval are listed on this tile. The documents include timesheets, expense reports, invoice proposals, etc.
Expense reports for approval	All the expense reports waiting for the logged in user's approval are listed on this tile.
Timesheet lines for approval	All the timesheets lines waiting for logged in user's approval are listed on this tile.

Expense line level approval	All the expense report lines waiting for logged in user's approval are listed on this tile.
My prebills due	All the 'Billing schedules' listed on this tile where 'Pre-billing validation target' is equal to today's date and 'status' is 'pending'. This tile will be available only when "Activate billing schedule" parameter is marked on project360 parameters.
My prebills past due	All the 'Billing schedules' listed on this tile where 'Pre-billing validation target' is smaller than today's date and status is 'pending'. This tile will be available only when "Activate billing schedule" parameter is marked on project360 parameters.
My adjustment requests	All adjustment requests created by logged in user are listed on this tile.
My open invoice proposals	All the invoice proposal created by logged in user and are in unposted state are listed on this tile.
My project missing timesheets	All the timesheets missing i.e., not submitted by the resources assigned in the projects where the logged in user is defined as Project manager are listed on this tile.
Invoices for approval	All the invoice proposals waiting for logged in user's approval are listed on this tile.
My opportunities in CRM	It opens the configured URL on the parameters displaying the opportunities from CRM.
My accounts in CRM	It opens the configured URL on the parameters displaying accounts from CRM.

2. List Page Section

List page	Description
Dashboard	It opens a BI dashboard.
My projects	List shows all the projects where the logged in user is assigned as the project manager.
My open invoices	List shows all the open invoices created by user.
My timesheets	Opens my timesheet list page showing all the timesheets with different statuses created by the logged in user.
My expenses	List shows all the expense reports created by the logged in user.
My PTO	List shows all the PTO requests created by the logged in user.

3. List of Buttons

The below mentioned buttons are available on the selection of My projects list page on the workspace.

Button	Description
Manage subprojects	Opens up the manage subprojects form for the selected project in the My projects list page.
Fee Management	Opens up the fee management form for the selected project in the My projects list page.
Contract management	Opens up the contract management form for the selected project in the My projects list page.
Project invoice proposals	Opens up the project invoice proposal form for the project selected in My projects list page.
Project statements	Opens up the project statement form for the project selected in My projects list page.
Resource forecast	Opens up the resource forecast form for the project selected in the My projects list page.

The below mentioned buttons are available on the selection of My timesheets list page on the workspace.

Button	Description
New timesheet	Use this button to create new timesheets from the workspace. Clicking on this button will open up the new timesheet creation form.
Manage pending time	Use this button to create new pending time from the workspace. Clicking on this button will open up the manage pending time creation form.
Manage activities	Use this button to quickly open my project activities form.
Chat with time approver	Allows to chat with the time approver for the selected line.

The below mentioned buttons are available on the selection of My expenses list page on the workspace.

Button	Description
New expense report	Use this button to create new expense reports from the workspace. Clicking on this button will open up the new expense report creation form.

The below mentioned buttons are available on the selection of My PTO list page on the workspace.

Button	Description
New PTO	Use this button to create new PTO request from the workspace. Clicking on this button will open up the Personal timeoff creation form.

4. List of Filters

Multiple filters are available on the selection of My open invoices list page on the workspace. User can narrow down their searches using these.

- Currency type
- Due date start
- Due date end
- Include non project transaction

5. Dashboard

A configurable dashboard is created for the project managers where based on the configuration setup the dashboard will be displayed.

Go to Project management and accounting > projects360 Setup > projects360 parameters > Workspace configuration tab

The screenshot displays the 'projects360 parameters' configuration page. The left sidebar lists various configuration categories, with 'Workspace configuration' selected. The main content area is titled 'Setup for workspaces' and contains two sections: 'Project manager workspace' and 'Project details workspace'. Each section has a 'DASHBOARD' subsection with a 'Show Dashboard tab' toggle (set to 'Yes'), a 'Power BI report view' dropdown (set to 'PowerBI.com'), and a 'Dashboard URL' text field. The 'Project manager workspace' also includes a 'TILES' subsection with 'My Accounts in CRM' and 'My Leads & Opportunities' toggles (both 'Yes'), and two 'URL' text fields. The 'Project details workspace' has similar 'DASHBOARD' settings.

Details of the each field available on this form are as follows :

Fields	Description
--------	-------------

Show dashboard tab	When this parameter is set to 'Yes' then the dashboard on the project manager will be displayed.
Power BI report view	Select 'Embedded BI' or 'PowerBi.com' report view to view the report in the workspace.
Dashboard URL	Specify the URL of the report to be viewed on the workspace.
My accounts in CRM	When this parameter is set to 'Yes' then the 'My accounts in CRM' tile will be visible on the workspace.
URL	Specify the URL of the environment from where the data to be viewed on the workspace.
My lead and opportunities	When this parameter is set to 'Yes' then the 'My lead and opportunities' tile will be visible on the workspace.
URL	Specify the URL of the environment from where the data to be viewed on the workspace.
Show dashboard tab	When this parameter is set to 'Yes' then the dashboard on the project manager for project details will be displayed.
Power BI report view	Select 'Embedded BI' or 'PowerBi.com' report view to view the report in the workspace.
Dashboard URL	Specify the URL of the report to be viewed on the workspace.

Project manager dashboard

This report displays based on the URL configured on the parameters form.

Project details dashboard

This report displays based on the URL configured on the parameters form. This report gets opened when the 'Project ID' hyper link is clicked on the 'My projects' list.

Project Management

All the features relating to projects360 project management have been grouped together in this section. The projects360 features that are grouped together in this section are:

[Manage subprojects](#)

Select a feature to view more details about them.

Manage Subprojects

The Manage subprojects feature has been specifically designed with the user in mind, allowing for the creation and maintenance of subprojects with an easy-to-use interface. With this feature, you can create multiple subprojects within a single grid, eliminating the need for complex navigation typically required when performing similar tasks using standard forms. All projects created using this feature are presented in a hierarchical structure, providing a clear visual representation of their relationship to one another.

When creating a subproject, all details, including dimensions, are defaulted from the parent project. However, these details can be easily modified and edited before saving the record. Additionally, a new data entity has been introduced to facilitate easy Excel import and maintenance for larger project structures.

With the Manage subprojects feature, a project tree can consist of up to three levels, which means a root project can have up to two child or sub-level projects, with multiple sibling projects within each level. This allows for greater flexibility in project organization and management, making it easier to keep track of project progress and ensure timely completion.

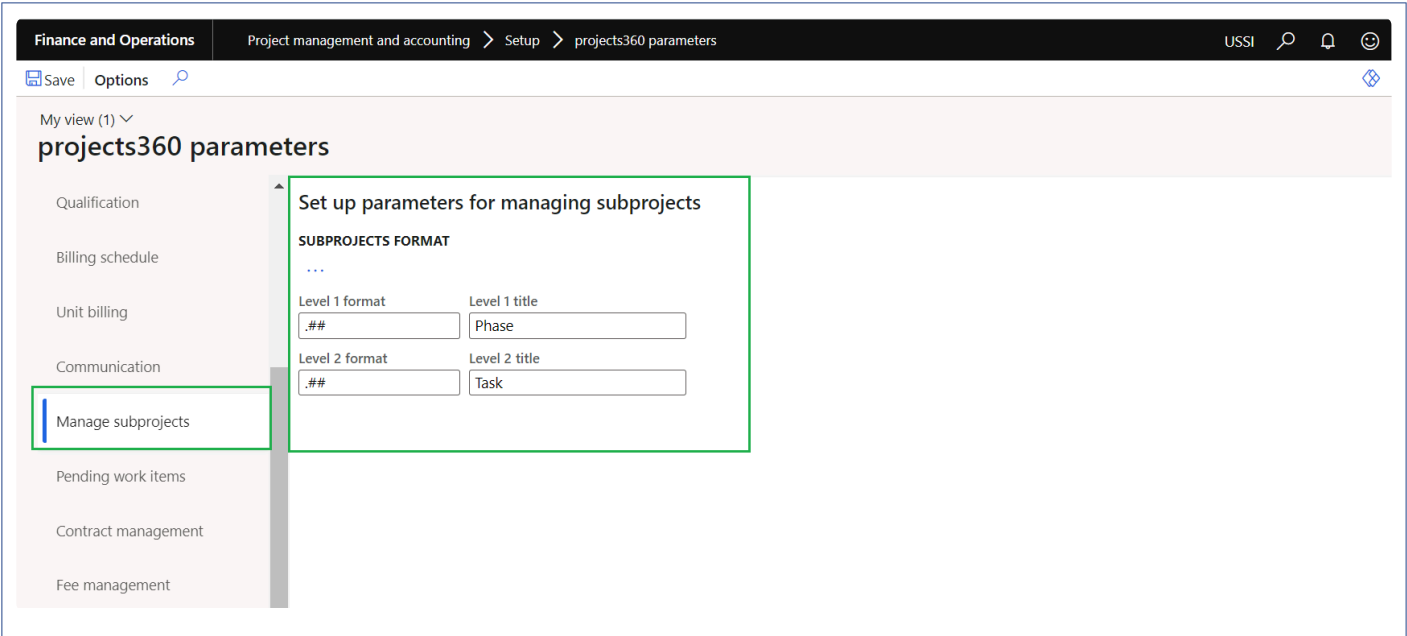

Configure Subproject

 This sections details out the setups required to be configured in order to use the manage subprojects functionality.

Parameter Setup

In the projects360 parameters, under the Manage subprojects tab, ‘Level 1’ and ‘Level 2’ fields will be available to define the Subproject format.

Go to *Project management and accounting > Setups > projects360 parameters > Manage subprojects tab*

Fields	Description
Update references	This button is provided to update the Root project ID, Level 1 and Level 2 fields in the Proj table. We are providing this option as one time process to update all records after upgrading from previous versions. Once you are on the latest version, these fields will be automatically updated on create/update events on the projects. This process needs to be executed to show the right data on the manage subprojects data entity.
Level 1 format	This field represents the format of subproject at level 1. This field is same as the standard field ‘Default subproject ID format’ on the project accounting and management parameters. Modifying the field on either places will reflect changes on the subsequent forms.
Level 2 format	This field represents the format of subproject at level 2. By default the field will be empty and user has to provide the format value. If this is left empty then the standard subproject format

	will be used.
Level 1 title	This field represents the title of level 1 button.
Level 2 title	This field represents the title of level 2 button .

Create Subprojects

This section details out the how the subprojects can be created and managed using the Manage subprojects form.

New form has been introduced in the projects360 module for users to create and maintain subprojects from a single place. As and when users create the subprojects, values from the parent project is defaulted on to the child projects. All the defaulted values can be changed as desired by the users until the data is saved at least once. Once data is saved, only selected fields can be modified.

Go to Project management and accounting > All projects > New tab > Manage subprojects

Go to Manage projects workspace > Manage project > Manage subprojects

Details of the buttons available on the Manage subprojects form are as follows –

Button	Description
Create level 1 project	When the user clicks this button a new dialog form is opened ‘Create level 1 project’ which allows the user to update the sub project format, Project name and create a new level 1 project. This button gets enabled on the sub projects
Create level 2 project	When the user clicks this button a new dialog form is opened ‘Create level 2 project’ which allows the user to update the sub project format, Project name and create a new child project. This button gets enabled on the sub projects upto 2 level.
Project stage	Click to change the Project stage
Project group	Click to change the Project group
Fee management	Clicking on this button opens up the Fee management form for selected project.
Work breakdown structure	Click to create and maintain work breakdown structure for each project
Activity Maintenance	Clicking on this button opens up the Activity maintenance form.

The form is divided into two section involving Project and Financial dimension details. Under the Project section, user can create new, delete, edit and filter sub projects. Users will be able to view the default values from the root project and can edit them if required.

Field	Description
Project ID	Defaults with Project ID for Parent project from number sequence and Defaults with the Project ID + defined format for Sibling project and child project. This field is non-editable field
Project name	Defaults from the parent project. However field is editable.
Root project id	Displays the project parent ID. Field is non-editable.
Level 1	Displays the value defined while creating the sub project. Field is non-editable.
Level 2	Displays the value defined while creating the sub project. Field is non-editable.
Project group	Defaults from the parent project. Field is non-editable.
Stage	Defaults from the parent project. Field is non-editable.
Project contract ID	Defaults from the parent project. However field is editable.
Project manager	Defaults from the parent project. However field is editable.
Project controller	Defaults from the parent project. However field is editable.
Sales manager	Defaults from the parent project. However field is editable.
Projected start date	Defaults from the parent project. However field is editable.
Projected end date	User defined field. However field is editable.
Actual start date	Defaults from the parent project. However field is editable.
Actual end date	Defaults from the parent project. However field is editable.

Under the Financial dimension section, If the Default dimension rules are configured then the same is respected on this form else financial dimensions from the parent project defaults on the sibling or child projects.

Subprojects data entity

New subprojects data entity called as 'Manage subprojects' with target entity named as 'PMIPManageSubprojectEntity' has been created to import and manage the larger subproject structures into the Manage subprojects form.

Contract Management

Welcome to the Contract Management feature, designed to simplify your financial agreement tracking and change order management.

With this feature, you can easily monitor agreement amounts and allocate them to projects and subprojects using customizable buckets. Agreements can be entered during negotiations and tracked until customer sign-off. Once approved, the contract amounts are transferred to Fee management and Billing rules as the current Contract value. You can also attach electronic documents related to the contractual agreement using the Document handling function.

This tool allows you to break down amounts into up to 10 user-definable buckets, making it easy to manage your finances and keep track of project progress. In addition, Contract Management helps with backlog reporting by tracking forecasted amounts and executing contracts on a specific date. The Contract Management form also has classification fields that allow for a breakdown of Backlog reporting columns.

Pending agreements can also be included in contracts, making it possible to layer future predicted backlog into your reports. This feature helps you stay ahead of the curve and make informed decisions about your financial agreements.

Lastly, Contract Management information can be easily exposed to reports including Power BI through the reporting groups. These reporting groups connect contract buckets with project groups, enabling you to create and explain data in your reports. This makes it easy to share important information with team members and stakeholders.

Configure

✿ This sections details out the setups required to be configured in order to use the contract management functionality.

Parameter Setup

There is a new parameter added under the projects360 parameters to activate this feature. Once activated, the contract management menu's are displayed on the project contracts and projects form.

Go to *Project management and accounting > Setup > projects360 parameters*

Contract Management Buckets

In contract management buckets form, we can set up the buckets required to distribute the agreement amount. On this form, we can setup maximum of 10 buckets. The title mentioned against each bucket, will show up on the contract management form. Along with buckets and title, we can specify the fee budget category and reporting group against each bucket.

Go to Project management and accounting > projects360 Setup > Contract management > Contract management buckets

Contract bucket	Title	Active	Fee budget category	Reporting group
Bucket 1	Compensation	<input checked="" type="checkbox"/>	Compensation	Hours
Bucket 2	Reimbursables	<input checked="" type="checkbox"/>	Reimbursables	Expense
Bucket 3	Subcontractors	<input checked="" type="checkbox"/>	Subcontractors	Contractors
Bucket 4	Labor	<input checked="" type="checkbox"/>	Compensation	Hours

Details of the each field available on this form are as follows :

Fields	Description
Contract bucket	Can select one of the 10 buckets from the drop-down available for configuration.
Title	An appropriate title can be specified for each bucket configured to show up on the contract management form.
Active	Checkbox to specify if the selected is active or not. Onlt the active buckets show up on the contract management form.
Fee budget category	Select a fee category for the slected category, this information will be used while creating the fee forecasts.
Reporting group	Select a reporting group. Once a reporting group is associated, this information can be used to for reporting purpose.

Details of the each buttons available on this form are as follows :

Buttons	Description
New	Allows to create a new record on this form.
Delete	Allows to delete the records created on this form
Category reporting	Allows to open the Category reporting groups form for the selected record.

groups	
--------	--

Contract Agreement Types

On this form the various contract agreement types an organization deals with can be defined. Once this configuration is done, these agreement types can be used while creating actual agreement. There is also a feasibility to define if the type is of original or not. This information can pulled into reports to see how many of the agreements are original/initial and how many of them are change orders/subsequent orders.

Go to Project management and accounting > projects360 Setup > Contract management > Contract agreement types

Details of the fields available on this form are as follows:

Fields	Description
Agreement type	Define agrrement types, this is an alpha-numeric field.
Description	Description for each agreement type can be specified on the field.
Original contract	Checkbox defines if the selected agreement type is an original contract or subsequent contract.

Category Reporting Groups

Category reporting groups can be configured to use this information for reporting purpose through either SSRS or PowerBI reports. In this form, you can associate the project categories to the reporting groups. Once you associate a project category to a reporting group, the same information can also be seen on the project category form as well as there is a new field called reporting category introduced on the it.

Go to Project management and accounting > projects360 Setup > Contract management > Category reporting groups

Details of the fields available on this form are as follows :

Fields	Description
Reporting group	Allows you to define a reporting group.
Reporting group name	Allows you to define a friendly reporting group name
Remaining categories	Shows all the categories which are not yet associated to any reporting group.
Selected Categories	Shows all the categories which are associated to current reporting group.
Show remaining categories	Provides an option to see and select either All or only Active categories in the selected category list.
Show selected categories	Provides an option to see either All or only Active categories in the selected category list.

Contract Reason Codes

On this form, various reason codes for agreement creation or modification can be defined, these codes can be selected while creating a new agreement or modifying a contract agreement.

Go to *Project management and accounting > projects360 Setup > Contract management > Contract reason codes*

Details of the fields available on this form are as follows :

Fields	Description
Reason	Define reason codes, this is an alpha-numeric field.
Description	Description for each reason codes can be specified on the field.

Create Contract Agreements

✿ *This sections details out how the contract agreements can be created and how those agreements can be distributed across the projects/project contracts.*

Contract Management

Contracts agreements can be created and distributed on the contract management form. This form can be opened from projects as well as from project contract form. Here contract agreements can be created for initial contracts and then subsequent contracts for change orders. Every time a new contract agreements are created, the contract value and contract hours are updated to projects once the agreements are approved. To approve the agreements, use the **Update status** button available on the menu. Users can also approve the contracts created for future dates.

Go to Project management and accounting > Projects > All projects > Contract management tab

Go to Project management and accounting > Projects > Project contracts > Contract management tab

At the menu bar there are three buttons provided for following actions.

- **Update status** – This button can be used to update the agreement status to approve, reject or pending states.
- **Subcontractors management** – This buttons will open up the subcontractors management form for users to enter the subcontracting information for the project contract.
- **Subcontractors accrual** – This buttons will open up the subcontractors accrual form for users to post or reverse accruals based on “% progress” entered from “Fee management”

This form is divided into 3 sections namely Contract agreements, Agreement distributions and Footer totals. Each section is explained below.

Contract Agreements

This grid allows to create new agreements and change orders. Once the agreements are approved, contract values and contract hours are updated to fee management form as the project contract values and hours. Simultaneously the on approval, fee forecasts are also created for the agreement lines, but the base for fee forecasts will agreement distributions.

DIFFERENCE	0.00	0.00	0.00	0.00	0.00	0.00

Buttons available on the contract agreements grid are as follows –

Buttons	Description
Add	Allows to create a new agreement lines.
Remove	Allows to remove the agreement lines.
Fee Forecasts	Allows to open the fee forecast form to view the all the forecasts created for the selected agreement line. This button will be enabled only for the approved agreement lines.

Fields available on the contract agreements grid are as follows –

Fields	Description
Agreement number	This field is an auto generated number. Number sequence can be Set up number sequence for Project documents to default numbers automatically.
Agreement type	Agreement type is drop-down field allowing us to select the values configured in the parameters.
Reason code	Reason code is drop-down field allowing us to select the values configured in the parameters.
Description	Decription defaults based on the reason code selected, but can be edited to add more information to give clear picture of creation or modification of agreement line.
Customer PO	Customer PO's created at the contract level can be associated to each agreement line using this field.
Request date	Actual request of the agreement can be specified on this field.
Buckets	A maximum of 10 buckets can be configured to show up on this form. Title of each bucket

	configured are shown as columns here. In the above screenshot – Compensation, Reimbursables, Subcontractor and Labor are the bucket titles which are shown as columns.
Contract value	Contract value is a non-editable field showing the sum of all the bucket values for an agreement line.
Contract hours	Contract hours is an editable field allowing us to enter the total hours of work agreed as per agreement terms.
Currency	Currency is a non-editable field showing currency associated with the project contract.
Status	Status is a non-editable field showing the current status of agreement line. This field can have 3 statuses – Pending, Approved and Rejected.
Status date	Status date is a non-editable field showing when the last status was updated for the agreement line. When agreement line status is pending, this field will be blank.
Modified by	Modified by is a non-editable field showing who was the last person who has taken action against it. When agreement line status is pending, this field will be blank.

Some of the non-editable fields at the bottom of this grid are as follows –

Fields	Description
Total contract value	Shows the sum of contract value of all the agreement lines.
Total approved	Shows the sum of contract value of all the approved agreement lines.
Total unapproved	Shows the sum of contract value of all pending & rejected agreement lines.

Agreement distribution

This grid allows to distribute the agreement line created in the above grid into different projects. You can add an individual project or entire project structure at once to distribute the contract values across the projects. Distribution amounts cannot exceed the agreement bucket value and should match exactly with agreement line to be approved.

Buttons available on the agreement distribution grid are as follows –

Buttons	Description
Add	Allows to create a new project line to distribute the agreement amount.
Remove	Allows to remove the project lines from the grid.
Copy from	This is a drop-down field containing the values – Project structure and Agreement allowing to

	<p>quickly fill in projects in the grid.</p> <p>Project Structure – This option allows to add the entire project structure including child projects. On selection of this option Project ID field gets enabled, allowing to select the project and its entire structure.</p> <p>Agreement – This option allows to add the projects which were part of an existing agreement for the selected contract. On selection of this option Agreement number field gets, allowing to select the agreement number.</p>
Fee management	Allows to open the Fee management form for the selected project in the grid.

Fields available on the agreement distribution grid are as follows –

Fields	Description
Project ID	A drop-down selection field allowing to select the project ID to which we want to distribute the agreement amount.
Project name	Non-editable field showing the name of the selected project ID in the previous column.
Fee type	Non-editable field showing the fee type of the selected project ID in the first column.
Buckets	A maximum of 10 buckets can be configured to show up on this form. Title of each bucket configured are shown as columns here. In the above screenshot – Compensation, Reimbursables, Subcontractor and Labor are the bucket titles which are shown as columns.
Contract value	Contract value is a non-editable field showing the sum of all the bucket values for an agreement line.
Contract hours	Contract hours is an editable field allowing us to enter the total hours of work agreed as per agreement terms.
Currency	Currency is a non-editable field showing currency associated with the project contract.

Footer totals

This is a non-editable section showing the real time sum of the agreement line selected in the top grid. The buckets are shown as the columns and total values are shown as rows. The values keep refreshing while user is entering them on contract agreement or agreement distribution grids. Agreements cannot be approved until difference row for each column is zero. Some of the fields details are as follows –

Fields	Description
Total contract	Shows the sum of contract value for an agreement line selected in the top grid.

Total distributed	Shows the sum of contract value distributed to projects so far for an agreement line selected in the top grid.
Total unapproved	Shows the of sum contract value not yet distributed to any of the projects.

ALL AGREEMENTS – There is checkbox at the end of the footer section which helps users to see the sum of values based either on the selected agreement line or all the agreement lines. If this checkbox is on, the footer section will show the consolidated agreement and distributed data.

Users can view contract management data from all projects list for the selected entity without navigating too much on different forms or without changing the company.

Fee Management

New functionality has been introduced to manage fixed price projects using the time and material accounting concepts. This design helps track the Accrued revenue and Work in progress on an hourly basis, while maintaining the nonbillable nature of those project transactions. This concept is lit up through a combination of automatic Billing rules and a new T&M “Fee types”. The Fee types available are:

- *None*
- *Fixed fee*
- *Progress*
- *Time and materials NTE*

There is new Fee management experience introduced to maintain the progress and visibility of the project status. Project budgets, progress percentage and milestones are managed from this form. Existing project invoice proposals can be viewed and new ones can be created as well.

This feature is parameter controlled. Billing categories can be specified on the parameters form to track the revenues generated from each kind billing methods. While defining a project budget or modifying it, a forecast line is created, tracking all the changes to project budget.

Configure

✿ This sections details out the setups required to be configured in order to use the Fee management functionality.

Parameter Setup

On projects360 parameter form, under Fee management tab, a new parameter “Activate fee management” has been introduced to control the Fee management functionality. User needs to set the “Activate fee management” field value to ‘Yes’ in order to use this feature. Along with activation, there are few more details need to filled in to use this feature, details of each field is provided in the table below the following visual.

Go to *Project management and accounting > Setups > projects360 parameters > Fee management tab*

The screenshot shows the 'projects360 parameters' form with the 'Fee management' tab selected. The form is titled 'Set up parameters for fee management' and contains several sections of configuration options:

- Activate fee management:** A toggle switch set to 'Yes'.
- BUDGET:** Includes 'Contract value category' (set to 'Fee') and 'Contract value model' (set to 'FEEM').
- BILLING CATEGORY:** Includes 'Progress' (set to 'ProgressFee') and 'Fixed fee' (set to 'MilestoneFee').
- Time and expense NTE:** Set to 'NTEFee'.
- CONTRACT HOURS:** Includes 'Contract hours category' (set to 'Service') and 'Contract hours model' (set to 'FEEM').
- REVENUE ADJUSTMENT CATEGORY:** Includes 'Percentage complete adjustment' (set to 'ProgressAdj') and 'NTE adjustment' (set to 'NTEAdj').
- Multicurrency difference adjustment:** Set to 'MultiCurrencyAdj'.
- REVENUE ADJUSTMENT 606 COMPLIANCE:** Includes 'Auto-reverse NTE adjustments' (set to 'Yes') and 'Auto-reverse contract cap adju...' (set to 'Yes').
- % PROGRESS HISTORY:** Includes 'Maintain % progress history' (set to 'Yes').
- PAY WHEN PAID:** Includes 'PWP for Progress/Fixed fee' (set to 'Yes') and 'Auto-select vendor invoices' (set to 'No').
- INDIRECT COST:** Includes 'Include indirect cost' (set to 'No').
- ADMINISTRATION FEE:** Includes 'Administration fee' (set to 'Yes') and 'Admin fee category' (set to 'Admin Fee').
- FORM LAYOUT:** Includes 'Rollup totals by parent project' (set to 'No') and 'Hide fee type - None' (set to 'No').
- ETC/EAC MANAGEMENT:** Includes 'Activate ETC/EAC management' (set to 'Yes'), 'ETC/EAC data source' (set to 'Manual ETC forecast'), 'ETC/EAC calculation method' (set to 'Cost'), 'Manual ETC forecast model' (set to 'ORIG-WBS'), and 'Display revenue deviation' (set to 'Yes').

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate fee management	This parameter enables users to activate Fee management functionality.
Contract value category	Select the fee category to be used for creating the fee forecast when a contract value is entered on the project in fee management form.
Contract value model	Select the forecast to be used for creating the fee forecast when a contract value is

	entered on the project in fee management form.
Billing category	Progress – Select a billing category which will be used while creating a billable fee transactions for the progress type of projects.
	Fixed Fee – Select a billing category which will be used while creating a billable fee transactions for the milestone\fixed fee type of projects.
	Time and expense NTE – Select a billing category which will be used while creating a negative fee transactions for the not to exceed type of projects.
Contract hour category	Select the hour category to be used for creating the hour forecasts when a contract hours are entered on the project in fee management form.
Contract hour model	Select the forecast to be used for creating the hour forecast when a contract hours are entered on the project in fee management form.
Percentage complete adjustment	Select a fee category to track the revenue adjustments on the project, this category be used for progress and fixed fee type of projects.
NTE adjustment	Select a fee category to track the revenue adjustments on the project, this category be used for Time and expense NTE type of projects.
Multicurrency difference adjustment	Select a fee category to track the revenue adjustments on the project, this category be used for where there is a difference in billing and accounting currency WIP balance.
Auto-reverse NTE adjustment	If this parameter is set to Yes, allows us to enable the auto-reversal of NTE adjustments.
Auto-reverse contract cap adjustment	If this parameter is set to Yes, allows us to enable the auto-reversal of percentage complete adjustments for only contract cap method.
Maintain % progress history	Enabling this field will help in tracking the history of each percentage update on fee management.
Include indirect cost	If this parameter is set to Yes, then the 'Include indirect cost' checkbox on the billing rules form will be defaulted to 'Yes' when automatically billing rule is created through fee management process.
Administration fee	If this parameter is set to Yes, then user can create administration fee through fee management process.
Administration fee category	Select the fee category to be defaulted while creating administration fee on fee management form.
Update progress billing rule	If this parameter is set to Yes, progress billing rule will be updated based on beginning balance.
Rollup totals by parent project	If this parameter is set to Yes, then the values on the fee management form will rolled up to parent projects from their subprojects on fee management form.
Hide fee type – None	If this parameter is set to Yes, then the projects with fee type None will not be

displayed on the fee management form.

Project Groups

On projects360 parameter form, once the feature is activated, a field called ‘Fee type’ will be available for selection on the project groups form. This field defines what kind of billing will be applied to the projects using this group.

Go to *Project management and accounting > Setup > Posting > Project groups*

The screenshot shows the 'Project groups' form in the 'Finance and Operations' application. The 'Fee type' field is highlighted with a green box and contains the value 'Progress'. The form includes sections for General, Ledger, Estimate, Cost accounts, and Revenue accounts.

General	
Project type Time and material	Fee type Progress
Personal time off No	Ledger posting search priority Category
Line property search priority Project	Default line property AccrueNoBill
Verify cost against remaining f... No

WIP - profit	WIP - subscription

Fields	Description
Fee type	<p>Select fee type ‘None’ to use the standard time and material projects.</p> <p>Select fee type ‘Progress’ to use progress billing projects.</p> <p>Select fee type ‘Fixed fee’ for milestone billing projects.</p> <p>Select fee type ‘Time and expense NTE’ for not to exceed billing projects.</p> <p>Select fee type ‘Time and expense’ for standard time and material project with the ability to define the contract value.</p>

Line Properties

Create different line properties, to cater to different scenarios. Create a line property with ‘Chargeable’ as yes and accrue revenue as ‘No’ and associate this with all the categories created to track the fee journals created with fee management. Now create another line property with Chargeable set to ‘No’ and accrue revenue set to ‘Yes’ and associate and associate them to the projects as shown in the below two screenshots.

Progress Billing

✿ This sections details out the how the Fee forecast and billing is created for fee type Progress.

In this project type the billing will be based on the progress of the project. Create a project with the project group of fee type “Progress” and when the user opens the new fee management form, the line with fee type “Progress” will get automatically created and a billing rule will be automatically created on project contract with the Fee budget amount as zero. Once the user updates “Fee budget” then a corresponding fee forecast line will be automatically created on fee forecast form and billing rule will be updated with the contract value amount.

Note – If the contract management is feature is active then contract value field will disabled and contract values will come from contract management form once the agreements are approved. Refer [contract management feature](#) for more details.

Project and Fee type

Fee management tab is added on the Projects form to manage the functionality for projects along with subprojects.

Go to *Project management and accounting > Projects > All projects > Fee management*

Fee management form

Fee management tab is available to define contract value for the projects which is used for forecast and billing. Once the contract value is entered, a fee forecast is created automatically and also contract value on the billing is updated with the entered contract value.

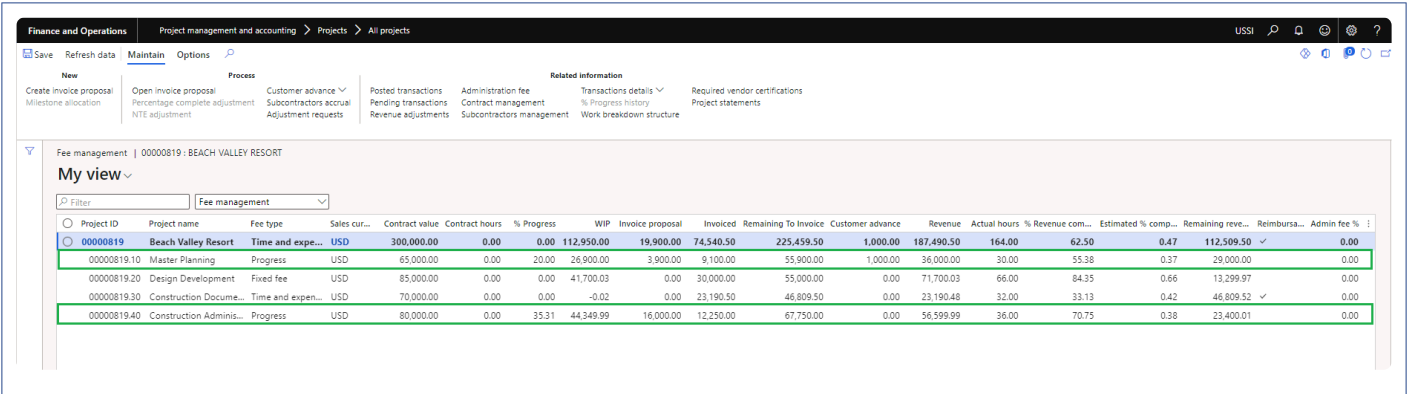

When Rollup totals by parent project parameter is marked, Parent projects that contains sub-project will be

displayed with bold text, and they will be non-editable. All the values will be rolled up and displayed on the parent projects.

Customer advance is added to fee management form, enabling users to request and track customer advances from fee management form itself. Also, a new column ‘Customer advance’ is added on the fee management allowing to track the customer advances received so far.

Project statement is added to fee management form, enabling users to view the project progress details.

Go to *Project management and accounting > Projects > All projects > Fee management*

Details of the fields available on the Fee management form are as follows –

Fields	Description
Project ID	Defaults from the selected project.
Project name	Defaults Project name.
Fee type	Defaults from the attached project group.
Sales currency	Defaults from the project.
Contract value	Editable field if contract management is not turned on. Used to enter the contract value for the selected projects. This field will be disabled for projects with fee type as ‘None’.
Contract hours	Editable field if contract management is not turned on. Used to enter the contract hours for the selected projects. This field will be disabled for projects with fee type as ‘None’.
Progress%	This field will be editable for projects with fee type as ‘Progress’. This field is used to update the percentage complete value for project and based on this value the invoice proposals can be created.
WIP	Shows the work in progress value for the selected project.
Invoice proposal	Show the amount for which there is an open invoice proposal exist in the system for the selected project.

Invoiced	Show the amount for which there is an invoices posted for the selected projects.
Remaining to invoice	Shows the amount for which invoice has to be raised.
Customer advance	Show the customer advanced received.
Revenue	Show the revenue generated so far for the selected project.
Actual hours	Shows the actual transactions/hours posted for the selected project.
Revenue completed%	Show the actual % completed for the selected projects based on what's already billed and work in progress.
Remaining revenue	This field shows the remaining revenue for the selected project. This is calculated by revenue from contract value.
Estimated completed%	Shows the estimate to complete percentage to complete.
Remaining revenue	Shows the remaining revenue.
Reimbursable expenses	Once this field is marked as yes, it will create a separate T&M billing rule on the project contract allowing us to bill the expenses as well for the project.
Admin fee%	This field shows the admin fee % from the billing rules.

Fee forecasts

When the user defines Fee budget on the Fee management form, automatically fee forecast line with defined Fee budget amount will get created on fee forecast form. Users will be restricted to update or delete this forecast lines if 'Activate contract management' parameter is marked on the projects360 parameters form and contract agreement references are updated on the forecast lines on the general tab.

Billing rules on Project contract

When the user defines Fee budget on the Fee management form, automatically billing rules will be updated with defined contract value amount on project contract form. Update retention button is introduced to update retention percentage on the billing rules.

Go to *Project management and accounting > Projects > Project contracts*

The screenshot shows the 'Project contracts' form in the 'Finance and Operations' module. The breadcrumb trail is 'Project management and accounting > Projects > Project contracts'. The form has tabs for 'Project contract', 'Plan', 'Maintain', 'Control', 'Contract management', 'Fee management', 'Billing schedule', and 'Options'. The 'Project contract' tab is active, showing a 'Set up' section with 'Fixed rate agreement', 'Automatic transaction rules', and 'Print management'. The 'Cost prices' section includes 'Hours', 'Expenses', and 'Transfer prices'. The 'Sales prices' section includes 'Hours', 'Fees', 'Expenses', and 'Subscriptions'. The main section is 'Project contracts | My view (1)'. Below this is a header '00003653 : WIP & % Progress'. The 'Billing rules' section is expanded, showing a table with columns: Billing rule, Billing rule type, Unit, Quantity, Unit sales price, Contract value, Category, Fee percentage, and Project ID. The table contains five rows of billing rules.

Billing rule	Billing rule type	Unit	Quantity	Unit sales price	Contract value	Category	Fee percentage	Project ID
000002701	Time and material		0.00	0.00	0.00		0.00	00000819
000002702	Progress		0.00	0.00	65,000.00	ProgressFee	0.00	00000819.10
000002703	Time and material		0.00	0.00	0.00		0.00	00000819.20
000002704	Time and material		0.00	0.00	0.00		0.00	00000819.30
000002705	Progress		0.00	0.00	80,000.00	ProgressFee	0.00	00000819.40

Project invoice proposals

User defines the % Progress completed for the project on the fee management form, where system will automatically calculate the amount to be billed at the current state of the project. Also each update of the % progress can be captured and viewed for future reference.

The screenshot shows the '% Progress history' table for project '00000819.40 : CONSTRUCTION ADMINISTRATION'. The table has columns: Project contract ID, Project contract name, Project ID, Project name, Previous % p..., New % progr..., Modified by, and Modified date. The table contains five rows of progress history data.

Project contract ID	Project contract name	Project ID	Project name	Previous % p...	New % progr...	Modified by	Modified date
00003653	Sunshine Construction PLC	00000819.40	Construction Administration	0.00	2.00	AppasahebN	22-07-2020 23:51:15
00003653	Sunshine Construction PLC	00000819.40	Construction Administration	2.00	4.00	AppasahebN	21-06-2020 20:02:35
00003653	Sunshine Construction PLC	00000819.40	Construction Administration	4.00	1.00	AppasahebN	21-06-2020 20:02:46
00003653	Sunshine Construction PLC	00000819.40	Construction Administration	1.00	35.00	AppasahebN	21-06-2020 21:26:38
00003653	Sunshine Construction PLC	00000819.40	Construction Administration	35.00	2.69	AppasahebN	19-07-2020 23:09:00

Based on the progress % update, the process will calculate the amount to be billed and create fee journal at the time creating an invoice proposal. Look at the scenario below to understand how the process calculates the amount for fee journal creation.

Contract value of a project = 10,000

% Progress updated (first attempt) = 10%

Fee journal while IP creation = 1,000

Invoice created and posted = 1,000

% Progress updated (second attempt) = 35%

Fee journal while IP creation = 2,500 (35% – 10% = 25%)

Go to Project management and accounting > Projects > Project invoice proposal

Go to Project management and accounting > All Projects > Fee Management Tab -> Fee management button -> Create invoice proposal Button

The screenshot displays the 'Project invoice proposal' form for project PJIP_00005812. The form is organized into several sections:

- General:** Includes fields for 'Invoice proposal' (PJIP_00005812), 'Invoice date' (30-07-2020), 'Sales currency' (USD), 'Status' (Open), 'Invoice template' (PSAProjInvoiceReport), 'Project contract ID' (00003653), 'Project contract name' (Sunshine Construction PLC), 'Funding source' (Work and Play Asso), 'Printing options' (Invoicing group: InvoiceGrp), 'Invoice format' (Invoice grouping), 'Invoice header text', 'PO number', 'Review comments', and 'Service date to' (30-07-2020).
- Invoice proposal transaction summaries:** A table showing transaction details for the project.
- Invoice proposal transactions:** A table showing the breakdown of fees for the project.

Project	Project name	Billing rule	Name	Amount invo...	Invoice line amount	Indirect costs	Retention pe...	Customer ret...	Amount less ...

Milestone Billing

✿ This sections details out the how the Fee forecast and billing is created for fee type milestone.

In this project type billing will be based on the milestones completed for the project. This feature allows professional services firms to automate and determine the accurate completion of the project.

User will create new project with the project group of fee type ‘Fixed fee’ and when the user opens the fee management form, the line with fee type ‘Fixed fee’ will get created and also a billing rule will be created on project contract with the contract value amount as zero automatically. Once the user updates “contract value” then a corresponding fee forecast line will get automatically created on fee forecast form.

Note – If contract management is feature is active then contract value field will disabled and contract values will come from contract management form once the agreements are approved. Refer [contract management feature](#) for more details.

Project and Milestone allocation

A button ‘Milestone allocation’ is provided on the fee management form to create schedule milestones with different project date.

Time & Expense (NTE)

This section details out how the Fee forecast and billing is created for time and expense not to exceed projects.

A time and expense not to exceed (T&E NTE) contract includes a cap that represents the maximum amount that can be charged by the contractor. This type of contract or clause can help to increase contractor efficiency because the contract price is limited to the cap amount, no matter how long the project takes or how high the materials costs run.

User will create new project with the project group of fee type “time and expense NTE” and when the user opens the fee management form, the line with fee type “Time and expense NTE” will get created and also a billing rule will be created on project contract with the contract value amount as zero automatically. Once the user updates contract value then a corresponding fee forecast lines will get automatically created on fee forecast form.

Note – If contract management is feature is active then contract value field will disabled and contract values will come from contract management form once the agreements are approved. Refer [contract management feature](#) for more details.

Pay when paid process

✿ This sections details out the Pay when paid process for Fixed and Progress fee type projects.

We have introduced 'Pay when paid' functionality for fixed fee and progress projects. The vendor invoices can be associated to customer invoices either during the invoice proposal creation or from the Pay when paid form. The vendor invoices will be released for payment once the customer payments are received and it matches the pay when paid details entered on the project.

Parameters

On the projects360 parameters form, new parameter is introduced 'PWP for Progress/Fixed fee' to control the pay when paid functionality for fixed fee and progress type of projects. User needs to set the "PWP for Progress/Fixed fee" field value to 'Yes' in order to use this feature.

The screenshot shows the 'projects360 parameters' form. The 'Set up parameters for fee management' section is expanded. The 'PAY WHEN PAID' section is highlighted with a green box, showing the following settings:

- PWP for Progress/Fixed fee:** Yes (checked)
- Auto-select vendor invoices:** No (unchecked)

Other visible settings include:

- Activate fee management:** Yes (checked)
- CONTRACT HOURS:** Contract hours category: Service, Contract hours model: ORIG-Res
- % PROGRESS HISTORY:** Maintain % progress history: Yes (checked)
- ADMINISTRATION FEE:** Administration fee: Yes (checked), Admin fee category: Admin Fee
- ETC/EAC MANAGEMENT:** Activate ETC/EAC management: Yes (checked), ETC/EAC data source: Manual ETC forecast

Fields	Description
PWP for Progress/Fixed fee	This parameter enables users to activate PWP for Progress/Fixed fee functionality.
Auto-select vendor invoices	When this parameter is turned on, all open PWP vendor invoice lines will be automatically selected related with each project.

Pay when paid process on project invoice proposal

On the project invoice proposal form new field ‘PWP remaining balance’ is added where it displays the sum “Line amount” from all vendor invoice lines with PWP and without customer invoice related. Whenever there is a PWP balance more than zero yellow icon will be displayed for the user.

New button ‘Add PWP vendor invoice’ is added where it displays all open PWP vendor invoice lines related with the selected project and with the open status. Along with this the form displays only the invoice lines where “Ready for payment” is “No”.

Go to *Project management and accounting > Projects > All projects > Project invoice proposal*

Details of the fields available on the Add PWP vendor invoice relation form are as follows –

Fields	Description
Vendor name	Display vendor name related with vendor account from vendor invoice.
Invoice	Displays invoice number of the vendor invoice.
Invoice date	Displays invoice date of the vendor invoice.
Line number	Displays line number from the vendor invoice on which the selected project ID is associated.
Line description	Displays line description from the vendor invoice on which the selected project ID is associated.

Quantity	Displays quantity from the vendor invoice on which the selected project ID is associated.
Unit price	Displays unit price from the vendor invoice on which the selected project ID is associated.
Amount	Displays cost amount from the vendor invoice on which the selected project ID is associated.
Currency	Displays currency from the vendor invoice on which the selected project ID is associated.
PWP remaining balance	Displays PWP balance of remaining vendor invoices.
Total selected	Displays the sum of the selected vendor invoices.
OK	On clicking OK button all the selected vendor invoice will get linked to the project invoice proposal.
Cancel	On clicking Cancel button process will get cancelled.

Once the project invoice proposal is posted, the standard process will create the relationship between Vendor invoice line and Customer invoice. User will be able to view this relationship on standard Vendor invoices with pay when paid form.

Details of the fields available on the Add invoice relation form are as follows –

Fields	Description
Name	Display customer name related with project invoice.
Invoice number	Displays invoice number of the project invoice.
Invoice date	Displays invoice date of the project invoice.
Amount	Displays invoice amount of the project invoicec.
Currency	Displays project invoice currency.

Note – When the full credit note is created for the project invoices linked with PWP, the relation between the vendor invoice and project invoice will be removed.

Revenue Adjustments

The aec360 Solution offers an option to adjust revenue as part of the fee management functionality. There are three options applicable for Fixed price approaches (Progress or fixed fee) where the adjustment can be calculated based on Total revenue, invoiced revenue or hours. NTE adjustments are applicable to T&E NTE projects where the revenue needs to be adjusted, for example, on cases where the project execution has overreached the contract amount.

Revenue adjustment feature is enhanced to generate auto-reversals based on 606 revenue compliance requirements, this reversals are applicable to 'Contract cap' method for percentage complete and 'NTE' revenue adjustments completion methods.

Configure

✿ This sections details out the setups required to be configured in order to use the revenue adjustment functionality.

Parameter Setup

On projects360 parameter form, within the Fee management tab, few new parameters “Percentage complete adjustment” and “NTE adjustment” has been introduced. This fields allows us to configure the categories to be used while creating/generating the revenue adjustment records. User needs to set the “Activate fee management” field value to ‘Yes’ in order to use this feature. Along with activation, there are few more details need to filled in to use this feature, details of each field is provided in the table below the following visual.

Go to *Project management and accounting > Setups > projects360 parameters > Fee management tab*

Revenue adjustment category

Fields	Description
Percentage complete adjustment	This parameter allows us to specify the project category to be used while creating/generating the revenue adjustments for Progress and Fixed fee projects.
NTE adjustment	This parameter allows us to specify the project category to be used while creating/generating the revenue adjustments for Time and material Not to exceed projects.

Multicurrency difference adjustment	This parameter allows us to specify the project category to be used while creating/generating the multicurrency difference revenue adjustments for Progress, T&E NTE and Fixed fee projects..
-------------------------------------	---

Revenue adjustment 606 compliance

Fields	Description
Auto-reverse NTE adjustments	This parameter allows us to enable the auto-reversal of NTE adjustments.
Auto-reverse contract cap adjustments	This parameter allows us to enable the auto-reversal of percentage complete adjustments for only contract cap method

Revenue adjustment posting

Fields	Description
Use adjustment date as posting date	This parameter allows to use the adjustment date as the posting date when executing revenue adjustments.

Percentage complete adjustment

Revenue adjustments – Progress/Fixed fee projects

Revenue adjustments capabilities has been built on top fee management allowing us to adjust the accrued revenue getting the correct total revenue as well as WIP and % complete at given point of time. There could be scenarios where the actual work completed is more or less than then what's been already billed to the client, in this case you can use the revenue adjustment capabilities bring back the project values to what's expected.

There are two type of the adjustments namely – percentage complete adjustment and NTE adjustment each catering to different fee types. Percentage complete adjustment is applicable to the projects with the fee type of progress or fixed fee where as NTE adjustment is applicable to projects with the fee type of time and expense NTE.

Go to Project management and accounting > All Projects > Fee management -> Percentage complete adjustment

Once user select progress fee type project, Percentage complete adjustment button is enabled allowing users to perform revenue adjustment.

Percentage complete adjustment

Project ID	Project name	Fee type	Sales currency	Contract value	Contract hours	% Progress	WIP	Invoice proposal	Invoiced	Revenue
00000819	Beach Valley Resort	Time and expense	USD	300,000.00	35,000.00	0.00	24,632.75	0.00	78,440.50	103,073.25
00000819.10	Master Planning	Progress	USD	65,000.00	8,000.00	20.00	1,300.00	0.00	13,000.00	14,300.00
00000819.20	Design Development	Fixed fee	USD	85,000.00	10,000.00	0.00	3,900.03	0.00	30,000.00	33,900.03
00000819.30	Construction Documents	Time and expense NTE	USD	70,000.00	7,500.00	0.00	282.73	0.00	23,190.50	23,473.23
00000819.40	Construction Administration	Progress	USD	80,000.00	9,500.00	2.69	19,149.99	0.00	12,250.00	31,399.99

While performing the adjustments, there are 5 different methods to adjust the project values.

- **From total revenue** – In this case an adjustment record is created considering the total revenue earned, this includes the invoiced as well as the accrued revenue vs total contract value of the project as on the day of adjustment. A record is created on the revenue adjustments form.

- **From Invoice revenue** – In this case an adjustment record is created considering the posted/invoiced revenue vs the total contract of the project as on the day of adjustment. A record is created on the revenue adjustments form.
- **From total hours** – In this case an adjustment record is created considering the posted hours vs the hour budget the project as on the day of adjustment. A record is created on the revenue adjustments form.
- **From contract value cap** – In this case an adjustment record is created considering the percentage complete revenue adjustment calculation. A record is created on the revenue adjustments form.
- **From estimated at completion** – In this case an adjustment record is created considering the estimated at completion percent vs total contract value of the project as on the day of adjustment. A record is created on the revenue adjustments form. This option is available and defaulted when “Activate ETC/EAC management” projects360 parameter is set as “Yes”.
- **From effective cost multiplier** – In this case an adjustment record is created considering the effective cost multiple for the project as on the day of adjustment. A record is created on the revenue adjustments form. This option is available and defaulted when “Activate ETC/EAC management” projects360 parameter is set as “Yes” and “ETC/EAC cost multiplier” projects360 parameters are set as “Yes”.

Adjustment date	Adjustment type	Project ID	Project name	Sales currency	Contract value	Contract hours	Invoiced	WIP	% complete	Actual revenue	Actual hours	Adjustment amount	Adjusted % completed	Adjusted revenue	Status	Adjusted by	Reason description
26-08-2020	Percent complete adjustment	00000819.10	Master Planning	USD	65,000.00	8,000.00	9,100.00	2,900.00	18.46	12,000.00	30.00	-2,900.00	14.00	9,100.00	Created	AppasahebN	

Once an adjustment record is created, user can update the ‘Adjustment amount’ and ‘Adjusted % completed’ to adjust the project balances. On updating the ‘Adjustment amount’ and ‘Adjusted % completed’ fields, the rest of the column values are auto calculated to reflect the right values. Once you are sure of the adjustment values, you can update the reason description and can post multiple revenue adjustments using button provided at the menu.

On posting a revenue adjustment, a fee journal is created in system. This fee journal uses the category defined on projects360 parameters.

Split	Date	Project name	Project ID	Category ID	Resource name	Item	Total sales a...	Amount in tr...	Total cost am...	Invoice status	Transaction type	Indirect cost ...	Account
✓	30-07-2020	Master Planning	00000819.10	ProgressFee			3,900.00	0.00	0.00	Chargeable	Fee		USD
	26-08-2020	Master Planning	00000819.10	ProgressAdj			-2,900.00	0.00	0.00	Nonchargeable	Fee		USD

Once the revenue adjustments are posted and complete, you can see the right values updated on the fee management based on the adjustment.

Project ID	Project name	Fee type	Sales cur...	Contract value	Contract hours	% Progress	WIP	Invoice proposal	Invoiced	Remaining To Invoice	Customer advance	Revenue	Actual hours	% Revenue com...
00000819	Beach Valley Resort	Time and expe...	USD	300,000.00	0.00	0.00	112,950.00	0.00	74,540.50	225,459.50	1,000.00	187,490.50	164.00	62.50
00000819.10	Master Planning	Progress	USD	65,000.00	0.00	22.00	26,900.00	0.00	9,100.00	55,900.00	1,000.00	36,000.00	30.00	55.38
00000819.20	Design Development	Fixed fee	USD	85,000.00	0.00	0.00	41,700.03	0.00	30,000.00	55,000.00	0.00	71,700.03	66.00	84.35

00000819.40	Construction Adminis...	Progress	USD	80,000.00	0.00	35.31	44,349.99	0.00	12,250.00	67,750.00	0.00	56,599.99	36.00	70.75

Revenue adjustment 606 compliance

If the 'Auto-reverse contract cap adjustments' option in the projects360 parameters is turned on, an automatic reversal is created for any previously posted adjustment and create a new revenue adjustments based off the current project balances. This auto-reversal functionality is applicable only for 'From contract value cap' method.

Here in the below screenshot, you can notice that second line in the grid is reversed through the third line. On the third line, 'Reversing entry' checkbox is marked and also there is a default reason description 'Auto-reversal 606 compliance' indicating this line is an auto-reversal.

Adjustment date	Adjustment type	Project ID	Project name	Sales currency	Contract v...	Contract h...	Invoiced	WIP	% complete	Actual rev...	Actual hours	Adjustment amount	Adjusted % co...	Adjusted revenue	Status	Reversing ...	Reason description	Adjusted by
8/26/2020	Percent complete adjust...	00000819.10	Master Planning	USD	65,000.00	8,000.00	9,100.00	2,900.00	18.46	12,000.00	30.00	0.00	0.00	12,000.00	Posted			ANarasannavar
8/26/2021	Percent complete adjust...	00000819.10	Master Planning	USD	65,000.00	8,000.00	10,100.00	1,900.00	18.46	12,000.00	30.00	-1,000.00	20.00	13,000.00	Posted	✓	Auto-reversal 606 compliance	ANarasannavar
1/4/2022	Percent complete adjust...	00000819.10	Master Planning	USD	65,000.00	8,000.00	10,100.00	1,900.00	18.46	12,000.00	30.00	0.00	0.00	12,000.00	Created			ANarasannavar

If “Auto-reverse contract cap adjustments” parameter is set as “Yes”, and ‘Revenue adjustment competition method’ is set to ‘From contract cap’ and “Skip zero adjustment amount” is set as “Yes” on ‘Percentage complete adjustment’ process then it will skip creating the revenue adjustment for ‘adjustment amount’ zero and also it will not create any reversal entry for posted adjustments when there is no remaining balance to create a new adjustment.

NTE adjustment

Revenue adjustments – Time & expense projects

Revenue adjustments capabilities has been built on top fee management allowing us to adjust the accrued revenue getting the correct total revenue as well as WIP and % complete at given point of time. There could be scenarios where the actual work completed is more or less than then what's been already billed to the client, in this case you can use the revenue adjustment capabilities bring back the project values to what's expected.

There are two type of the adjustments namely – percentage complete adjustment and NTE adjustment each catering to different fee types. Percentage complete adjustment is applicable to the projects with the fee type of progress or fixed fee where NTE adjustment is applicable to projects with the fee type of time and expense NTE.

Go to Project management and accounting > All Projects > Fee management -> NTE adjustment

Once user select time and expense NTE fee type project, NTE adjustment button is enabled allowing users to perform revenue adjustment.

The screenshot shows the 'NTE adjustment' form in the projects360 system. The form is open over a 'Fee management' table. The table lists projects for 'Beach Valley Resort' with various fee types. The 'NTE adjustment' form has fields for 'Project ID' (00000819.30), 'Adjustment date' (11/27/2020), and a 'Reason description' field. There are also checkboxes for 'Include sub projects' (set to No) and 'Run in the background'. The form has 'OK' and 'Cancel' buttons at the bottom right.

Project ID	Project name	Fee type	Sales currency	Contract value	Contract hours	% Progress	WIP	Invoice proposal
00000819	Beach Valley Resort	Time and expense	USD	300,000.00	35,000.00	0.00	23,332.75	0.00
00000819.10	Master Planning	Progress	USD	65,000.00	8,000.00	22.00	0.00	0.00
00000819.20	Design Development	Fixed fee	USD	85,000.00	10,000.00	0.00	3,900.03	0.00
00000819.30	Construction Documents	Time and expense NTE	USD	70,000.00	7,500.00	0.00	282.73	0.00
00000819.40	Construction Administration	Progress	USD	80,000.00	9,500.00	2.69	19,149.99	0.00

For NTE adjustments, calculations are straight forward. What value you see on the fee management form is brought into the revenue adjustment form and then we adjust the project balance by modifying the the 'Adjustment amount' and 'Adjusted % completed'.

Adjustment date	Adjustment type	Project ID	Project name	Sales currency	Contract value	Contract hours	Invoiced	WIP	% complete	Actual revenue	Actual hours	Adjustment amount	Adjusted % completed	Adjusted revenue	Status	Adjusted by	Reason description
27-08-2020	NTE adjustment	00000819.30	Construction Docu...	USD	70,000.00	7,500.00	27,381.00	12,836.00	57.45	40,217.00	80.00	-4,188.00	51.47	36,029.00	Created	AppasahebN	

Once an adjustment record is created, user the modify the 'Adjustment amount' and 'Adjusted % completed' to adjust the project balances. On the modification, previously mentioned fields and the rest of the fields are auto calculated to reflect the right values. Once you sure of the adjusted values, you can post multiple revenue adjustments using button provided at the menu.

On posting a fee journal is created in system. The fee journal uses the category define on projects360 parameters.

Split	Date	Project name	Project ID	Category ID	Resource name	Item	Total sales a...	Amount in tr...	Total cost am...	Invoice status	Transaction type	Indirect cost ...	Account
	30-07-2020	Construction Documents	00000819.30	PM	Appasaheb Narasannavar		2,900.00	2,000.00	2,000.00	Chargeable	Hour		USD
	30-07-2020	Construction Documents	00000819.30	ERPDev	Appasaheb Narasannavar		3,396.00	2,340.00	2,340.00	Chargeable	Hour		USD
	27-08-2020	Construction Documents	00000819.30	QA	Appasaheb Narasannavar		2,540.00	1,750.00	1,750.00	Chargeable	Hour		USD
	27-08-2020	Construction Documents	00000819.30	NTEAdj			-4,188.00	0.00	0.00	Chargeable	Fee		USD

Once the revenue adjustments are posted and complete, you can see the right values updated on the fee management based on the adjustment.

Revenue adjustment 606 compliance

If the 'Auto-reverse NTE adjustments' option in the projects360 parameters is turned on, an automatic reversal is created for any previously posted adjustment and create a new revenue adjustments based off the current project balances.

Here in the below screenshot, you can notice that third line in the grid is reversed through the fourth line. On the fourth line, 'Reversing entry' checkbox is marked and also there is default reason description 'Auto-reversal 606 compliance' indicating this is an auto-reversal.

Adjustment date	Adjustment type	Project ID	Project name	Sales currency	Contract v...	Contract h...	Invoiced	WIP	% complete	Actual rev...	Actual hours	Adjustment amount	Adjusted % co...	Adjusted revenue	Status	Reversing ...	Adjusted by	Reason description
9/27/2020	NTE adjustment	00000819.30	Construction Doc...	USD	70,000.00	7,500.00	23,190.50	-0.02	33.13	23,190.48	32.00	0.00	33.13	23,190.48	Posted		ANarasamnavar

11/30/2021	NTE adjustment	00000819.30	Construction Doc...	USD	70,000.00	7,500.00	23,190.50	-0.02	33.13	23,190.48	32.00	-1,000.00	34.56	24,190.48	Created	✓	ANarasamnavar	Auto-reversal 606 compliance
12/1/2021	NTE adjustment	00000819.30	Construction Doc...	USD	70,000.00	7,500.00	23,190.50	-0.02	33.13	23,190.48	32.00	0.00	33.13	23,190.48	Created		ANarasamnavar	

If 'Auto-reverse NTE adjustments' parameter is set to 'yes' and "Skip zero adjustment amount" is set as "Yes" on 'NTE adjustment' process, then it will skip creating the revenue adjustment for 'adjustment amount' zero and also it will not create any reversal entry for posted adjustments when there is no remaining balance to create a new adjustment.

Multicurrency difference

Revenue adjustments for multicurrency difference.

Revenue adjustments capabilities has been extended to cater for multicurrency scenarios. There could be scenarios where WIP is in sales currency on Fee management, but WIP is in accounting currency on project statement form then due to change in currency exchange rate, the multicurrency difference occurs. In this case you can use the multicurrency difference adjustment.

Multicurrency difference adjustment is applicable to the projects with fee type of Progress, Fixed Fee, and Time & Expense NTE.

when the sales currency is different than accounting currency, multicurrency difference adjustment button is enabled allowing users to perform revenue adjustment.

Go to Project management and accounting > All Projects > Fee management -> Multicurrency difference adjustment

Go to Project management and accounting > projects360 periodic > Revenue adjustment -> Multicurrency difference adjustment

?

Fee billing projection

 This section details out the setups required and the process in order to use the Fee billing projection functionality.

New functionality has been introduced to allow users to forecast project billing. User is provided with a new Fee management form view where total projected and remaining projected will be calculated based on entered projected billing amount.

User can view projected billing amount based on different fee billing projection period. This feature is controlled by parameter. Forecast models can be specified on the parameter form to store the projected billing amounts for each specific period.

Parameter Setup

On projects360 parameter form, under Fee management tab, a new parameter “Activate fee billing projections” has been introduced to control the fee billing projection functionality. User needs to set the “Activate fee billing projections” field value to ‘Yes’ to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Fee management tab*

The screenshot shows the 'projects360 parameters' form in the 'Fee management' tab. The form is titled 'Set up parameters for fee management'. It contains several sections with configuration options:

- Activate fee management:** Yes (checked)
- BUDGET:** Contract value category (Fee), Contract hours model (FEEM), Contract value model (FEEM)
- BILLING CATEGORY:** Progress (ProgressFee), Fixed fee (MilestoneFee), Time and expense NTE (NTEFee)
- CONTRACT HOURS:** Contract hours category (Service), Contract hours model (FEEM)
- REVENUE ADJUSTMENT CATEGORY:** Percentage complete adjustment (ProgressAdj), NTE adjustment (NTEAdj), Multicurrency difference adjustment (Multicurrency difference adjustment)
- REVENUE ADJUSTMENT 606 COMPLIANCE:** Auto-reverse NTE adjustments
- % PROGRESS HISTORY:** Maintain % progress history (Yes)
- PAY WHEN PAID:** PWP for Progress/Fixed fee (Yes), Auto-select vendor invoices (Yes)
- INDIRECT COST:** Include indirect cost (Yes)
- ADMINISTRATION FEE:** Administration fee (Yes)
- BEGINNING BALANCES:** Update progress billing rule (Yes)
- FORM LAYOUT:** Rollup totals by parent project (Yes), Hide fee type - None (No)
- ETC/EAC MANAGEMENT:** Activate ETC/EAC management (Yes), ETC/EAC data source (Manual ETC cost buckets), ETC/EAC calculation method
- ETC/EAC COST MULTIPLIER:** ETC/EAC cost multiplier (Yes), Target cost multiplier (2.00), Effective cost forecast model (Effect)
- FEE BILLING PROJECTIONS (highlighted):** Activate fee billing projections (Yes), Fee billing projection period (Month), Fee billing forecast model (BILL-PROJ)

Fields	Description
Activate fee billing projections	This parameter enables users to activate fee billing projections functionality.
Fee billing projections	User can select fee billing projections period (Month/Quarter/Year) in this field, which will be used to default values on fee billing projections form.

periods	Month: User can view the projected period per month. Quarter: User can view the projected period per quarter. Year: User can view the projected period per year.
Fee billing forecast model	Selected forecast will be used for creating fee forecast when amounts are entered on projection periods in fee billing projections form.

Fee billing projection.

New view option “Fee billing projection” is added on the existing Fee management form. New fields will be initialized only when the “Fee billing projection” view option is selected on the Fee management form. This new form provides the ability to forecast the project billing projections based on the fee billing projections periods and fee billing forecast model. Based on fee billing projection period defined on parameter user can view the projected billing amount on fee billing projections form. Projected billing amount will be stored as fee forecast transaction for each specific period.

When Rollup totals by parent project parameter is marked, Parent projects that contains sub-project will be displayed with bold text, and they will be non-editable. All the values will be rolled up and displayed on the parent projects.

Fields	Description
Project ID	Defaults from the selected project.
Project name	Defaults from the selected project.
Fee type	Defaults from the attached project group.
Sales currency	Defaults from the project contract.

Contract value	Editable field if contract management is not turned on. Used to enter the contract value for the selected projects. This field will be disabled for projects with fee type as 'None'.
Invoiced	Shows the amount for which there is an invoice posted for the selected project. It is defaulted from fee management form.
Remaining to invoice	Shows the amount for which invoice has to be raised. It is defaulted from fee management form.
Customer advance	Shows the customer advanced received. It is defaulted from fee management form.
Total projected	It displays sum of projected amount entered in projected periods. It will be calculated as sum of sales amount from fee forecast where forecast model is equal to fee billing forecast model defined on parameter.
Remaining projected	It displays remaining projected amount. It uses first date of period based on today's date for calculation. For example: if the period is month and today is Dec 24 th , then it will calculate the amount from Dec 1 st . Similarly for period quarter and year also.
Projection periods	Depending on the view setting for 'fee billing projection period', it displays projected periods. Projected period will be displayed as 12 months, 12 quarters, 12 years based on selected start date. Amount will be displayed as sum of sales amount from fee forecast where forecast model is equal to fee billing forecast model defined on parameter.

Details of the filter options available on this form are as follows:

Fields	Description
Filter	User can filter fee billing projection records based on the available fields.
Start date	Displays start date. By default, it will display today's date.
Fee billing projection period	Displays projection period. It will be defaulted from fee billing projection period parameter.

Details of the button available on this form are as follows:

Fields	Description
Navigation button	Navigation button helps to switch the projection period on the fee billing projection form.

ETC/EAC Management

New functionality has been introduced to allows users to view the estimated costs/ hours based on either WBS, Resourcing or Manual forecast. User is provided with a new Fee management form's view where Estimated hours/cost To Complete (ETC) as well as Estimated hours/cost At Completion (EAC) are available. This view allows users to compare the actual versus estimated along with the revenue deviations per project. Revenue adjustments can be calculated based on the ETC percentage for fixed fee and progress projects. ETC information is available from billing schedule as well.

This feature is parameter controlled. Forecast models and Forecast calculation method can be specified on the parameters form to view the revenues generated from each kind of calculation methods.

Configure

This sections details out the setups required to be configured in order to use the ETC/EAC management functionality.

Parameter Setup

On projects360 parameter form, under Fee management tab, a new parameter “Activate ETC/EAC management” has been introduced to control the ETC/EAC management functionality. User needs to set the “Activate ETC/EAC management” field value to ‘Yes’ in order to use this feature. Along with activation, there are few more details need to filled in to use this feature, details of each field is provided in the table below the following visual.

Go to *Project management and accounting > Setups > projects360 parameters > Fee management tab*

The screenshot shows the 'projects360 parameters' form in the 'Fee management' tab. The form is organized into several sections. The 'ETC/EAC MANAGEMENT' section is highlighted with a green box, showing the 'Activate ETC/EAC management' toggle set to 'Yes', 'ETC/EAC data source' set to 'Manual ETC cost buckets', 'ETC/EAC calculation method' set to 'Cost', 'Manual ETC forecast model' set to 'Manual ETC', 'Update manual ETC forecast while...' set to 'Yes', and 'Display revenue deviation' set to 'Yes'. The 'ETC/EAC COST MULTIPLIER' section is also highlighted with a green box, showing the 'ETC/EAC cost multiplier' toggle set to 'Yes', 'Target cost multiplier' set to '2.00', and 'Effective cost forecast model' set to 'Effect'.

Details of the fields available for ETC/EAC management are as follows –

Fields	Description
Activate ETC/EAC management	This parameter enables users to activate ETC/EAC management functionality.
ETC/EAC data	Select the data source as Manual ETC forecast, Resource forecast, WBS forecast or Manual

source	ETC cost buckets which is used for calculating the ETC hours/Cost for the project in ETC/EAC management form.
ETC/EAC calculation method	Select the calculation method as Hours or Cost which is used as base for calculating the ETC and EAC. When ETC/EAC data source is selected as Manual ETC cost buckets, then the calculation method is defaulted to Cost.
Manual ETC forecast model	Select the manual forecast model when the ETC/EAC data source is set as Manual ETC forecast.
Update manual ETC forecast while posting	When this parameter is set to Yes, forecast cost amount will be reduced whenever the transaction gets posted.
Display revenue deviation	When this parameter is set to Yes, Estimated revenue deviation amount field will be visible on ETC/EAC management form.
ETC/EAC cost multiplier	This parameter enables users to activate ETC/EAC cost multiplier functionality.
Target cost multiplier	Set the value in this field which is used for calculating the cost applied on forecast transactions.
Effective cost forecast model	Select the forecast model to create forecast transaction when ETC/EAC data source is set as Manual ETC cost buckets.

ETC/EAC settings by project group

On project group form, under Estimate tab, new field 'Exclude from multiplier journal' is added at the project group level, which is subsequently inherited by all new projects created under this project group. This provides users with greater control over the implementation of the multiplier journals functionality, allowing them to specify project groups where this feature should or should not be applied.

Details of the fields available for Manual ETC/EAC cost buckets form are as follows –

Fields	Description
Cost bucket	Select the cost buckets. This will allow upto 10 buckets.
Bucket name	Define bucket name.

Active	Select this parameter to use this bucket on ETC/EAC management and ETC/EAC multiplier journal
Transaction type	Select the transaction type.
Cost forecast category	Select cost forecast category to create and identify the forecast transaction created for cost bucket and this will be filtered based on the selected transaction type.
Related contract bucket	Select the bucket to link the contract buckets. This field is mandatory if either “Include in multiplier” or “Include in % complete” is set as “Yes”.
Include in % complete	When this parameter is set to Yes, the value from this cost bucket will be considered for calculation of Contract value, Actual cost, EAC cost, ETC cost and create the forecast transactions.
Include in multiplier	When this parameter is set to Yes, the value from this cost bucket will be considered for calculation of Cost multiplier and Cost adjustment.
Modified by	Displays the user name who modified the record.
Modified date and time	Displays the modified date and time.

ETC/EAC cost multiplier journal

This sections details out how the ETC/EAC multiplier journal can be created and how the forecast transactions are created through the approval process.

New journal is added to create and approve cost calculation and apply the cost to the forecast transactions. This journal will be available when “Activate ETC/EAC management” parameter is set as “Yes”. User is provided with an option to adjust the cost based on four options EAC cost multiplier, Effective cost multiplier, Target cost multiplier and manual where user can review and analyze the project based on “ETC cost buckets” and apply a new adjusted “Effective multiplier” to the project cost forecast.

ETC/EAC journal can be created through the menu item provided on the Project or through a periodic process.

Go to Project management and accounting > Projects > All projects > Fee management tab > ETC/EAC cost multiplier

Go to Project management and accounting > Projects > All projects > Project tab > ETC/EAC cost multiplier

User can use Show field to filter the journal header by All, Pending and Approved. There is an option provided to the user to filter the journals which is assigned to him/her.

Details of the fields available on Overview ETC/EAC cost multiplier journal header form are as follows –

Fields	Description
Journal ID	Displays journal ID generated through number sequence.
Description	Displays description of the journal and is editable
Lines	Displays the number of lines on the journal lines.
Assigned to	Select the resource who is responsible for this journal.
Status	Displays the status of the journal either Pending or Approved.
Modified date and time	Displays modified date time.
Modified by	Displays resource who modified the journal.

Details of the fields available on General ETC/EAC cost multiplier journal header form are as follows –

Fields	Description
Journal ID	Displays journal ID generated through number sequence.
Description	Displays description of the journal and is editable
Assigned to	Select the resource who is responsible for this journal.
Status	Displays the status of the journal either Pending or Approved.

Details of the buttons available on ETC/EAC cost multiplier journal header form are as follows –

Fields	Description
Edit	User can edit the journal when the status is in pending status.
New	User can create new journal.
Delete	User can delete the journal when the status is in pending status .
Lines	Click this button to open journal lines.
Update status	User can update the status to Approved .

When the user clicks on Lines, new form opens where user can create new record through New button or through Generate lines button. Once the record is created values will be displayed based on the set up and user can adjust EAC cost multiplier based on the four options. User can select multiple transaction to adjust the amount. Based on the option selected, amount will get updated on the “Adjusted EAC cost multiplier” field.

- EAC cost multiplier – This option calculates adjustment amount based on Actual + ETC cost vs

contract value. This multiplier is the real one and doesn't consider adjustments.

- Targeted cost multiplier – This option calculates adjustment amount based on Targeted multipliers configured for each project. This will allow us to compare the targeted vs the current/effective ones.
- Effective cost multiplier – This option calculates adjustment amount based on all the adjustments made so far by “ETC/EAC cost multiplier journals”.
- Manual – In this option user can manually update the adjustment amounts.

Details of the fields available on Journal lines tab ETC/EAC multiplier journal are as follows –

Fields	Description
Transaction date	Displays current date and is editable.
Project ID	Select the Project ID. User can select only Main project without parent project ID and for which “ETC/EAC data source” is “Manual ETC cost buckets” and “ETC/EAC calculation method” is equal to “Cost” on ETC/EAC management settings.
Project name	Displays selected project name.
Project group	Displays selected project group.
Contract value	Displays sum of contract value from the Manual ETC/EAC cost buckets for which “Include in % complete” is set as “Yes”.
Sales currency	Displays sales currency related with that project contract.
Contract hours	Displays sum of hours from contract management including all subprojects.

Actual hours	Displays actual hours posted for all the subprojects.
Actual cost	Displays sum of actual costs from the Manual ETC/EAC cost buckets for which “Include in % complete” is set as “Yes”.
ETC cost	Displays sum of ETC costs from the Manual ETC/EAC cost buckets for which “Include in % complete” is set as “Yes”.
EAC cost	Displays sum of EAC costs from the Manual ETC/EAC cost buckets for which “Include in % complete” is set as “Yes”.
Estimated % complete	Displays estimated complete percentage by considering Actual cost and EAC cost.
EAC cost multiplier	Displays EAC cost multiplier by considering multiplier contract value and multiplier EAC cost. Multiplier contract value is considered from the Manual ETC/EAC cost buckets for which “Include in multiplier” is set as “Yes” and Multiplier EAC cost value will be EAC cost from the Manual ETC/EAC cost buckets for which “Include in multiplier” is set as Yes. If the contract currency and cost currency is different for the transaction, then contract value will be converted into the cost currency for the calculation.
Target cost multiplier	Displays “Target cost multiplier” field value from Project.
Effective cost multiplier	Displays Effective cost multiplier by considering Contract value and Effective EAC cost. Contract value is considered from the Manual ETC/EAC cost buckets for which “Include in multiplier” is set as “Yes”. If the contract currency and cost currency is different for the transaction, then contract value will be converted into the cost currency for the calculation.
Cost adjustment amount	Displays sum of cost adjustment amount from the Manual ETC/EAC cost buckets for which “Include in multiplier” is set as “Yes”.
Adjusted EAC cost	Displays sum of Actual cost, EAC cost and Cost adjustment amount.
Adjusted EAC cost multiplier	Displays Adjusted EAC cost multiplier by considering Contract value and Adjusted EAC cost. Contract value is considered from the Manual ETC/EAC cost buckets for which “Include in multiplier” is set as “Yes”. If the contract currency and cost currency is different for the transaction, then contract value will be converted into the cost currency for the calculation.
Cost currency	Displays cost currency of the project.
Adjust based on	Displays Adjust based on and is editable when status is Pending.
Status	Displays the status as Pending or Approved.

Effective cost multiplier field is non displayed field on the grid. Displays sum of Effective EAC costs from the Manual ETC/EAC cost buckets for which “Include in % complete” is set as “Yes”.

Details of the fields available on Manual ETC/EAC cost buckets tab ETC/EAC multiplier journal are as follows –

Fields	Description
Cost bucket	Displays all the active cost buckets from Manual ETC/EAC cost buckets setup.
Contract value	Displays sum of approved contract value related to the cost bucket and the project contract.
Sales currency	Displays sales currency related with that project contract.
Actual cost	Displays sum of cost amount from the posted transactions where category matches with the categories selected on Reporting group configured on the contract management bucket which is linked to Cost bucket on Manual ETC/EAC cost buckets setup form. This field displays the actual cost for all the project/subprojects.
ETC cost	Displays ETC cost amount by summing the cost amount from forecast transactions related to the Cost forecast category configured in the Cost bucket and the forecast model” configured in “Manual ETC forecast model” parameter. This field displays the actual cost for all the project/subprojects.
EAC cost	Displays the cost amount summing the Actual cost and ETC cost.
Estimated % complete	Displays estimated complete percentage by considering Actual cost and EAC cost.
EAC cost multiplier	Displays EAC cost multiplier by considering Contract value and EAC cost. If the contract currency and cost currency is different for the transaction, then contract value will be converted into the cost currency for the calculation.
Effective cost multiplier	Displays Effective cost multiplier by considering Contract value and Effective EAC cost. If the contract currency and cost currency is different for the transaction, then contract value will be converted into the cost currency for the calculation.
Cost adjustment amount	Define cost adjustment value when adjust based on is Manual. When cost amount is defined “Adjusted EAC cost” and “ETC/EAC cost adjusted multiplier” will be recalculated when the new value is entered in this field.
Adjusted EAC cost	Displays sum of Actual cost, EAC cost and Cost adjustment amount.
Adjusted EAC cost	Displays Adjusted EAC cost multiplier by considering Contract value and Adjusted EAC cost. If the contract currency and cost currency is different for the transaction, then contract value will be

multiplier	converted into the cost currency for the calculation. Cost adjustment amount and Adjusted EAC cost will be recalculated when the new value is entered in this field.
Cost currency	Displays cost currency of the project.
Include in % complete	Displays value from Manual ETC/EAC cost buckets.
Include in multiplier	Displays value from Manual ETC/EAC cost buckets.

Below are the details of the buttons available on the form:

- Update status button – User can approve all the lines or the selected lines through “Approve” and “Approve selected lines” option. Once the user approve the lines status of the journal lines changes to “Approved”.
- Generate lines – Using this button, users can generate ETC cost multiplier journal lines based on the responsible types.
- Adjust based on button has four options EAC cost multiplier, Targeted cost multiplier, Effective cost multiplier and Manual. Based on the option selected, amount will get updated on the “Adjusted EAC cost multiplier” field.
- Fee management is added to provide flexibility to view the fee management form from the journal level for the particular journal lines.
- Effective cost multiplier history button is added which displayed the history of the pervious and new effective cost multiplier.

Details of the fields available on Effective cost multiplier history button are as follows –

Fields	Description
Project contract ID	Displays project contract of the project.
Project contract name	Displays project contract name.
Project ID	Displays project ID.
Project name	Displays project name.
Previous effective cost multiplier	Displays previous effective cost multiplier.
New effective cost multiplier	Displays new effective cost multiplier.

Modified by	Displays modified by name.
Modified date and time	Displays modified date and time.

View ETC/EAC management

This sections details out the how the ETC/EAC is calculated based on the various settings.

New view option “ETC/EAC management” is added on the existing Fee management form. This view option will be available when “Activate ETC/EAC management” parameter is set as “Yes”. New fields will be initialized only when the “ETC/EAC management” view option is selected on the Fee management form. New menu item is created to open and initialize the “Fee management” form directly as “ETC/EAC management” on the projects form.

When Rollup totals by parent project parameter is marked, Parent projects that contains sub-project will be displayed with bold text, and they will be non-editable. All the values will be rolled up and displayed on the parent projects.

Details of the fields available on ETC/EAC management form are as follows –

Fields	Description
Project ID	Defaults from the selected project.
Project name	Defaults Project name.
Fee type	Defaults from the attached project group.
Sales currency	Defaults from the project.
Contract value	Editable field if contract management is not turned on. Used to enter the contract value for the selected projects. This field will be disabled for projects with fee type as ‘None’.
Contract hours	Editable field if contract management is not turned on. Used to enter the contract hours for the selected projects. This field will be disabled for projects with fee type as ‘None’.
Revenue	Show the revenue generated so far for the selected project.

Actual hours	Shows the actual hour transactions posted for the selected project.
Actual cost	Shows actual cost amount posted from all project transactions. This field is visible only when ETC/EAC calculation method" is set as "Cost".
% Revenue completed	Show the actual % completed for the selected projects based on what's already billed and work in progress.
Estimated % completed	Shows the estimated % completed for the selected projects based on actual hours/cost posted and estimated at completion hours/cost.
ETC manual buckets	A maximum of 10 buckets can be configured to show up on this form. Title of each bucket configured on Manual ETC/EAC buckets are shown as columns here. In the above screenshot – ETC Labor, ETC Reimbursable and ETC Direct Expense are the bucket titles which are shown as columns.
ETC hours	Shows sum of hours from all hours forecast transactions related with Project Id and Forecast model set on the project contract/parameter. This field is visible only when ETC/EAC calculation method" is set as "Hours".
ETC cost	Shows sum of cost from all hours forecast transactions related with Project Id and Forecast model set on the project contract/parameter. This field is visible only when ETC/EAC calculation method" is set as "Cost".
EAC hours	Shows sum of ETC hours and actual hours posted for the selected project. This field is visible only when ETC/EAC calculation method" is set as "Hours".
EAC cost	Shows sum of ETC cost and actual cost posted for the selected project. This field is visible only when ETC/EAC calculation method" is set as "Cost".
EAC cost multiplier	Shows value arrived by dividing Contract value by EAC cost
Effective actual cost	Shows sum of actual cost of all the posted transactions related to the "Reporting group project categories" and belonging to the project/subprojects from buckets where "Include in % complete" is marked and related to the "Contract agreement bucket" linked to the active Cost bucket.
Effective % complete	Shows value arrived by dividing Effective actual cost by Effective EAC cost
Effective EAC cost	Shows sum of cost amount from forecast transactions related to the cost forecast category configured in the cost bucket and forecast model configured in "Effective cost forecast model" parameter.
Effective cost multiplier	Shows value arrived by dividing Effective contract value by Effective EAC cost
Hours over budget	Shows the hours when estimated at completion hours is more than the contract hours. This field is visible only when ETC/EAC calculation method" is set as "Hours".

Estimated revenue deviation %	This field shows the estimated revenue deviation percentage for the selected project. This is calculated considering estimated % complete and revenue completed.
Estimated revenue deviation amount	This field shows the estimated revenue deviation amount for the selected project. This is calculated considering contract amount and Estimated revenue deviation.

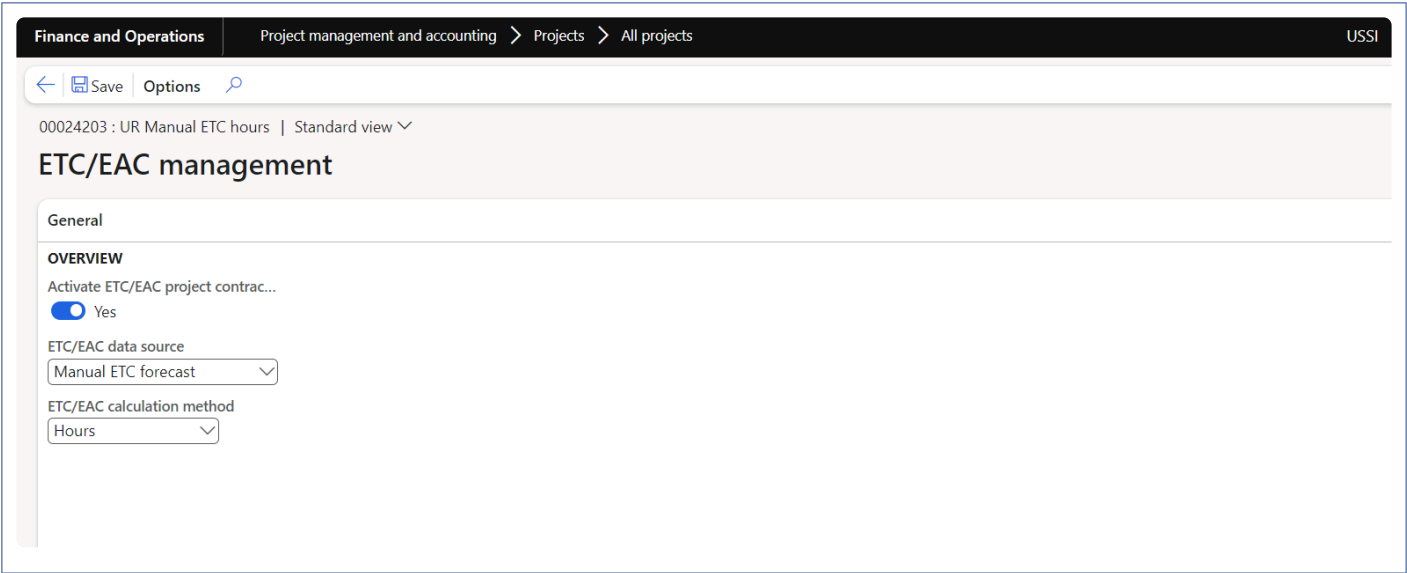

Details of the fields available on Project totals form are as follows –

Fields	Description
Contract value	Editable field if contract management is not turned on. Used to enter the contract value for the selected projects. This field will be disabled for projects with fee type as 'None'.
Contract hours	Editable field if contract management is not turned on. Used to enter the contract hours for the selected projects. This field will be disabled for projects with fee type as 'None'.
Revenue	Show the revenue generated so far for the selected project.
Actual hours	Shows the actual hour transactions posted for the selected project.
Actual cost	Shows actual cost amount posted from all project transactions. This field is visible only when ETC/EAC calculation method" is set as "Cost".
% Revenue completed	Show the actual % completed for the selected projects based on what's already billed and work in progress.
Estimated % completed	Shows the estimated % completed for the selected projects based on actual hours/cost posted and estimated at completion hours/cost.
ETC hours	Shows sum of hours from all hours forecast transactions related with Project Id and Forecast model set on the project contract/parameter. This field is visible only when ETC/EAC calculation method" is set as "Hours".
ETC cost	Shows sum of cost from all hours forecast transactions related with Project Id and Forecast model set on the project contract/parameter. This field is visible only when ETC/EAC calculation method" is set as "Cost".
EAC hours	Shows sum of ETC hours and actual hours posted for the selected project. This field is visible only when ETC/EAC calculation method" is set as "Hours".
EAC cost	Shows sum of ETC cost and actual cost posted for the selected project. This field is visible only when ETC/EAC calculation method" is set as "Cost".
Hours over budget	Shows the hours when estimated at completion hours is more than the contract hours. This field is visible only when ETC/EAC calculation method" is set as "Hours".

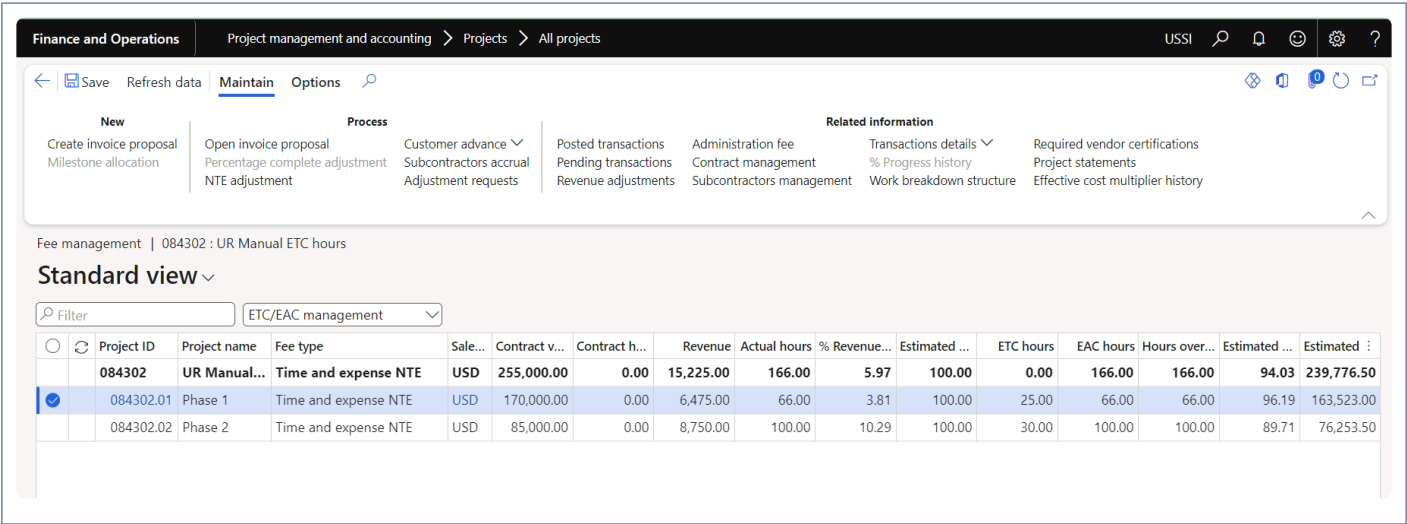

Update manual ETC forecast while posting.

When “Update manual ETC forecast while posting” is marked and ETC/EAC data source is set as “Manual ETC forecast” with calculation method as “Hours”, ETC (Estimate To Complete) forecast quantity and cost amount will be reduced with Hours and Cost amount when hour transactions are posted. Forecast cost amount will be reduced with Cost amount when expense transactions are posted.

On Contract management – ETC/EAC settings id defined as Manual ETC forecast” with calculation method as “Hours”

On ETC/EAC management – ETC hours are updated and Forecast is created with the forecast model defined on the parameters.

- Effective cost multiplier history button is added which displayed the history of the pervious and new effective cost multiplier.

Details of the fields available on Effective cost multiplier history button are as follows –

Fields	Description
Project contract ID	Displays project contract of the project.
Project contract name	Displays project contract name.
Project ID	Displays project ID.
Project name	Displays project name.

Previous effective cost multiplier	Displays previous effective cost multiplier.
New effective cost multiplier	Displays new effective cost multiplier.
Modified by	Displays modified by name.
Modified date and time	Displays modified date and time.

Administration fee

This new feature allows users to quickly enter an administration fee percentage directly in Fee management form. A new billing rule will be automatically created invoicing administration fees to clients. Also, administration fees will be recalculated after any simple adjustment is posted while the invoice proposal is still open.

Configure

✿ This sections details out the setups required to be configured in order to use the Administration fee functionality.

Parameter Setup

On projects360 parameter form, under Fee management tab, a new parameter “Administration fee” has been introduced to control the Administration fee functionality. User needs to set the “Administration fee” field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Fee management tab*

Finance and Operations

Project management and accounting > Setup > projects360 parameters

SubContractor Management

Subcontractor management ensures consistency in how firms manage their subcontractors. This new feature enhances the existing “Contract management” experience allowing Project Accountants and Project Managers to distribute contract buckets across multiple subcontractors/vendors.

In addition, there is a new process and form available to calculate subcontractor accruals based on “% progress” entered from “Fee management”. On this new form users can review the accrual proposal and post them as expenses. Those accrued expenses can be reversed at a later stage.

Configure

✿ This sections details out the setups required to be configured in order to use the subcontractor management functionality.

Parameter Setup

There is a new parameter added under the projects360 parameters to activate this feature. Once activated, the contract management menu's are displayed on the project contracts and projects form.

Go to *Project management and accounting > Setup > projects360 parameters*

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate subcontractors management	This checkbox allows you to enable the subcontractors management feature.
Add unaaproved	This will allow either only the approved contracts for subcontracting or both approved and unapproved contracts. If the checkbox is ON, both approved and unapproved contracts will be

contract value	considered for subcontracting.
Activate subcontractors accrual	This checkbox decides whether the accrual functionality to be enabled or not.
Auto post accrual journal	This makes sure that the expense journal that gets created is automatically posted when the post button is clicked on the subcontractors accrual form. If this is OFF, then users has to post the expense journal manually.
Validate budget vs contract value	Marking this checkbox box makes sure that the subcontractor amount to not exceed the the contract value of the project or the contract bucket.
Subcontractors category group	Allows to select a category group. Project categories under this group can be used for accrual journals.
Accrual journal name	Allows to select the accrual journal names. This name will be used while created the accrual journals.
Accrual line property	Allows to select the accrual line property. This line property will be used for the accrual journals.
Accrual offset account type	Allows to select the accrual offset account type as Vendor or Ledger. This will be used while posting the accrual journals.
Accrual offset account	Allows to select the accrual offset account. This field is enabled only when the accrual offset account type is Ledger and will be used for the accrual journals.

Contract Management Buckets

On contract management buckets form, users can define which buckets can be used for subcontractors. Once the buckets are decided, users can define if the accrual journal to have cost, cost and revenue or none as the accrual methods. Here we can also define the categories to be used while posted the accrual journals.

Go to Project management and accounting > projects360 Setup > Contract management > Contract management buckets

Contract bucket	Title	Active	Fee budget category	Reporting group	Subcontractors	Subcontractor accrual	Subcontractor category
Bucket 1	Labor	✓	Compensation	Hours		None	
Bucket 2	Reimbursables	✓	Reimbursables	Expense		None	
Bucket 3	Subcontractors	✓	Subcontractors	Contractors	✓	Cost and revenue	SubLabor
Bucket 4	Sub Reimbursables	✓	Compensation	SubReimbursables	✓	Cost and revenue	SubReimb
Bucket 5	Expense	✓	Fee	Contractors	✓	Cost	SubReimb

Subcontract projects

 This sections details out how the contract values can be distributed to subcontractors.

Contract Management

Once the Contracts agreements are created, these can be distributed for subcontracting using the new button or the form provided. The distribution can be among the multiple vendors or single vendor but multiple tasks/phases of the project. This form is divided into two sections, this grid allows to enter the subcontracting information while totals/footer section keeps displaying the latest values as and when makes changes in the grid.

The new form can be accessed from following places –

- Project management and accounting > Projects > All projects/project details > “Contract management” tab > “Subcontractors management” button
- Project management and accounting > Projects > Project contracts > “Contract management” tab > “Subcontractors management” button
- “Fee management” form > “Maintain” tab > “Related information” section > “Subcontractors management” button
- “Contract management” form > “Subcontractors management” button

Details of the button available on this form are as follows –

Fields	Description
New	Allows to create new record on this form.
Remove	Allows to remove the subcontracting lines from the grid.

Contract management	Allows to open the contract management form.
Subcontractor accruals	Allows to open the subcontractor accrual form.

Details of the fields available on this form are as follows –

Fields	Description
Vendor account	Allows to select the vendor to whom the work will be subcontracted.
Vendor name	Shows the name of the vendor selected in the vendor account field.
Contract bucket	Allows to select the contract bucket from which the work will be subcontracted.
Subcontractor category	Based on the contract bucket, subcontractor category will be defaulted as configured on the parameters. This can be changed as per requirement.
Project ID	Allows to select the project ID for which the work will subcontracted. Based on the contract bucket, the project ID's will be shown in this dropdown.
Project name	Shows the name of the project selected in the project ID field.
Contract value	Allows to enter the amount of work you desire to outsource/subcontract.
Markup	If there are markups defined in the pricing table, then markup value will default here else user can key in the desired/agreed markup value.
Cost budget	This field be calculated based on the contract value divided by the markup.
Currency	Show the currency project contract. This is a non editable field.
Subcontractor accrual	Based on the contract bucket and project ID selected, this will default with either None, Cost or Cost and revenue. This can be changed as per the needs.
Purchase agreement	Allows to select the purchase agreement details with the selected vendor and project on the line.

There is footer information available on the bottom of the form to provide some key information to user to help distribute the outsourcing/subcontracting information.

Fields	Description
Approved contract	This field show the approved agreement values for each bucket. Buckets are denoted as column headers.
Unapproved contract	This field show the unapproved agreement values for each bucket. Buckets are denoted as column headers.

Total distributed	This field show the total amount distributed so far for subcontracting. This information is again shown per bucket and buckets are denoted as column headers.
Difference	This field shows the amount yet to be distributed to subcontractors. This information is again shown per bucket and buckets are denoted as column headers.
Cost budget	This field show the cost budget of all the subcontracting line entered so far on the form.

Subcontractor accruals

✿ This sections details out how the accrual transactions can be created and how to reverse those transactions at a later point of time.

Subcontractor Accruals

On this form, there is a new process and form available to calculate subcontractor accruals based on “% progress” entered from “Fee management”. On this new form users can review the accrual proposal and post them as expenses. Those accrued expenses can be reversed at a later stage. This accrual and reversal process helps us in keeping the project balances up to date with the subcontractor progress.

To create the accrual proposal, we need to go to the below paths –

Project management and accounting > Projects > All projects/project details > “Contract management” tab > “Process” section > “Subcontractors accrual” button

Project management and accounting > Projects > Project contracts > “Contract management” tab > “Process” section > “Subcontractors accrual” button

“Contract management” form > “Subcontractors accrual” button

“Subcontractors management” form > “Subcontractors accrual” button

Project management and accounting > Projects360 periodic > Subcontractors management > Subcontractors accrual

To create a new proposals, click on generate proposal button. A slide form pops up to create, enter the details and hit OK. Proposal generation process can be scheduled through the batch process as well. Once an accrual process is created, it displays in the overview grid. as seen in the below visual.

TOTAL COST BUDGET	TOTAL VENDOR INVOICED	TOTAL ACCRUAL	TOTAL REMAINING BUDGET
52,000.00	12,000.00	4,594.75	35,405.25

Details of the some of the fields available on this field are as follows -

Fields	Description
--------	-------------

Vendor account	This field shows the “Vendor account” from “Subcontractors management” table considered for creating a proposal.
Vendor name	Shows the vendor name of the selected vendor account on the line.
Contract name	Shows the project contract name of the selected on the line.
Project ID	Displays the Project ID from Subcontractors management table considered for creating a proposal.
Project name	Shows the project name of the selected project ID on the line.
Cost budget	Shows the sum of aggregated “Cost budget” field values for the specific vendor account and project ID.
Vendor invoiced	Shows the aggregated sales amount (cost price * Qty) from project expense transactions (ProjCostTrans) where project ID = Project ID and Transaction origin = vendor invoice related with the selected vendor account. Project expense transactions includes expense posted through Vendor invoice, purchase orders, project expense journal and general journal.
% Vendor invoiced	Calculated field showing vendor invoiced divided by cost budget multiplied by 100.
% Progress	Defaulted by % Progress field value from Fee management related with Project ID. If % Progress is zero, then it will be defaulted from % vendor invoiced.
Accrual amount	Calculated field showing (cost budget multiplied by % Progress divided by 100) minus vendor invoiced.
% Accrual	Calculated field showing accrual amount divided by cost budget multiplied by 100.
Remaining budget	Calculated field showing cost budget minus Vendor invoiced minus accrual amount.
Sales currency	Currency from project contract “Sales currency” field.

Accrual Journal Posting

Once the accrual journal is created, they are shown the form. These accrual journals create project expenses journals behind the scenes and can be directly posted from subcontractors accrual form or can be manually posted on the project expense journal form. This is controlled through the parameter on the projects360 parameters form.

Note – The expense journal will get posted with offset account type will be as Ledger when the accrual offset account type is selected as Ledger and ledger account is defined on the parameters.

Accrual Journal Reversal

Posted accrual journal can be reversed at any point of time. Usually the reversals are performed once the actual vendor invoices hit our system. To perform the reversal just hit the reverse button on the form. This reversal process will negate the earlier posted accrual journal and also auto settle both the transactions.

Subcontractor Accruals data entity

New data entity “Subcontractors accrual” and “Subcontractors accrual line” are introduced to import and export the subcontractor accruals data.

Required Vendor Certification by Project

A new functionality has been introduced wherein the vendor certifications can be associated with projects. While associating certifications to a project, we can specify if these certificates are required/mandatory to release the vendor payments. If the active certifications on the vendor do not match the project certification requirement, the vendor invoices are not released for payments

Configure Vendor Certification

✿ This sections details out the configuration required for vendor certification.

A new functionality has been introduced wherein the vendor certifications can be associated with projects. While associating certifications to a project, we can specify if these certificates are required/mandatory to release the vendor payments. If the active certifications on the vendor do not match the project certification requirement, the vendor invoices are not released for payments.

Parameters

On the projects360 parameters form, new parameter is introduced ‘Activate vendor certifications by project’ to associate vendor certification on projects and to define if these certificates are required/mandatory to release the vendor payments. User needs to set the “Activate vendor certifications by project” field value to ‘Yes’ in order to use this feature.

PWP for vendor certifications

Yes

Fields	Description
Activate vendor certifications by project	This parameter enables users to activate vendor certification on projects.
PWP for vendor certifications	When this parameter is set to Yes, PWP release will validate “Required vendor certifications” while releasing a vendor invoice for payment.

Required vendor certifications

New form is introduced to create the vendor certifications and to define if these certificates are required/mandatory to release the vendor payments. In this form user can create vendor certification for particular project, vendor, group of vendors or for all vendors.

Go to Project management and accounting > All projects/project details form > “Control” tab > “Retention” group > “Required vendor certifications” button

Go to Project management and accounting > All projects/project details form > Fee management > “Related information” group > “Required vendor certifications” button

Go to Project management and accounting > Project details form > “Vendor agreements” fast tab > “Required vendor certifications” button

Details of the fields available on the Required vendor certification form are as follows –

Fields	Description
Project Id	Display Project ID.
Valid for	Defaults with All.
Vendor relation	Displays vendor relation if is applicable for particular vendor or group or for all vendor.
Certification type	Displays certification types from vendor certificates.
From date	Select from date.
To date	Select To date.
Required for PWP	When this parameter is set to Yes, then before releasing the payment for the vendor invoices, vendor certificate will be validated.

Validate Vendor Certification for PWP

Validation of vendor certificate for pay when paid

When the parameter is marked, while releasing the payment to the vendor, based on the required vendor certification setup, validation process will begin to check with the required vendor certifications are available on the vendor or not, if available then successfully payments will be released to the vendor or else warning icon will be displayed on the form.

Activity Management

All the new functionality pertaining to activity management are grouped in this section.

[My Project Activities](#)

[Auto Add to Favourites](#)

Select a feature to view more details about them.

WBS Forecast Sync

The WBS forecast sync feature simplifies the publishing process of the WBS. The Cost estimates defined on the Work breakdown structure are automatically transferred to forecasts when the WBS version is Published.

Configure Forecast Sync

✿ This sections details out the setups required to be configured in order to automatically synchronize the WBS and forecasts data in the system.

Parameter Setup

A parameter is added on the projects360 parameters form to activate this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Work breakdown structure tab*

The screenshot shows the 'projects360 parameters' form with the 'Work breakdown structure' tab selected. The form is divided into three main sections: 'WBS FORECAST', 'WORK BREAKDOWN STRUCTURE', and 'WBS AUTOMATED EVENTS'. The 'WBS AUTOMATED EVENTS' section is highlighted with a green box. It contains a 'Transfer from WBS' toggle set to 'Yes' and a 'Forecast model' dropdown set to 'ORIG-WBS'. The 'WBS FORECAST' section has dropdowns for 'Planned value' (PV-WBS), 'Earned value' (EV-WBS), and 'Estimate to complete' (ETC-WBS). The 'WORK BREAKDOWN STRUCTURE' section has a toggle for 'Activate work breakdown structure' set to 'Yes'.

Fields	Description
Transfer from WBS	When the parameter is marked, the automatic synchronize is turned on WBS and forecasts. Whenever a change is made on the WBS and published, forecasts are automatically updated with the latest information. At this point, the forecasts are always delete and replace with the latest information from WBS.
Forecast model	Specify the forecast model to be used while creating the automatic forecasts based on the published WBS information.

Create & Review Forecasts

✿ This sections details out the how the forecasts are automatically created and what information from WBS is carried forward to the forecasts.

WBS Publish

As soon as the WBS created/added/modified on any the projects and published, a process in the background creates the forecasts for the published WBS information. This happens on each publish event. While publishing the modification on WBS, the process deletes the existing forecasts and create a new forecasts based on latest information. Below are couple of visual explaining the process.

Here a user has created/updated the WBS and published the same.

Below is the some of the information carried over to forecast from work breakdown structure.

Field name	Description
WBS ID	Defaulted from WBS ID field on the work breakdown structure
Task name	Defaulted from Task name defined on the work breakdown structure.
Forecast model	This field is defaulted based on what is being defined on the projects360 parameters.
Transaction type	Defaults from Task name defined on the work breakdown structure.
Project date	Defaults from the task start date specified on the WBS line.
Project ID	Defaults from the project ID available on the WBS line.
Activity number	Defaults with activity number associated with the WBS line.
Category	Defaults with the category associated on the WBS line
Resource	Defaults with the resource assigned on the WBS line. If there is no resource assigned then comes empty.
Description	Defaults with the category description based on the category selected on the WBS line.
Quantity	Defaults with the quantity defined on the WBS line.
Cost price	Defaults with cost price defined on the WBS line.
Total cost amount	Defaults with cost price multiplied by quantity defined on the WBS line.
Sales price	Defaults with the sales price entered on the WBS line.
sales price total	Defaults with sales price multiplied by quantity defined on the WBS line
Line property	defaults with the line property defined on the WBS line.

My Projects Activities

A Resource has a place to view all project activities assigned to them by a Project manager on the WBS. This form displays all the tasks across Projects and across Legal entities, and includes some basic budgetary information so the Resource can help the Project manager manage the Hours spent. This experience also has options for quick time entry against the Activities.

Review Project Activities

 This section shows the how we can keep track of all the activities across projects and legal entities assigned to us. This feature is not governed by any parameter.

As an employee in an organization you might want to have a place where you can look for all the tasks and other details assigned to you. By looking at the data on the form, resources can interpret where they are in terms of progress of each activity assigned to them and hence better manage their activities.

My Projects Activities form

A new form added to display all the tasks (across projects) for the logged in resource which are assigned to them. This new form is added on the Projects Tasks workspace as a tile and will accessible to project timesheet user and employee roles.

Timesheet nu...	Resource	Period start da...	Period end date	Approval status	Timesheet total
00000447	Usha Ravindra Rao	4/1/2019	4/7/2019	Draft	0.00

Some of the information available to resources on this form is as follows –

Legal entity	Project ID	Project name	Activity number	Activity description	Start date	End date	Estimated eff...	All hours	My hours	Remaining hou...	Closed	Activity closed c
ussi	00000328	DDR1	W00003978	Test	3/26/2019	3/26/2019	8.00	0.00	0.00	8.00		

Column	Description
--------	-------------

Estimated effort	This column shows the total effort assigned on the selected activity
All hours	This column shows all the hours posted or saved against that activity. Hours on the pending time form not considered.
My hours	This column shows all the hours posted or saved against that activity by the logged-in resource. Hours on the pending time form not considered.
Remaining hours	This column shows remaining effort for the selected activity. Example, Activity A has total effort of 40 hours, resource ABC has posted 15 hours on it. Another resource XYZ posts 5 hours on the same activity. In this case remaining hours will show as 40 hours minus 20 hours i.e. 20 hours.
Closed	Shows if the selected activity is closed.
Activity closed date	Shows the activity closed date

Details of the buttons available on the My project activities form are as follows –

Button	Description
Create time	When the user clicks this button a new dialog form is opened 'Create time' to create a timesheet or pending time records. User can select an activity and create a time either in pending time or timesheet directly from this form. In case multiple activities are selected, create time button will be disabled. When the activity is closed during the timesheet period, still the user can go ahead and create timesheet with the closed activity through Create Time button. Create Time button will be disabled when the user tries to create timesheet with the closed activity for the next coming timesheet period.
Manage pending time	When the user clicks this button a new form is opened to manage pending time.
My timesheet	When the user clicks this button My timesheet form is opened to create timesheets.
Chat with project manager	When the user clicks this button Microsoft teams opens to chat with the assigned project manager.

Auto Add to Favorites

Currently in Microsoft Dynamics 365 for Finance and Operations, there is no process to add favorites automatically where resource manually enters timesheet favorites whenever the project or activity assigned.

projects360 has introduced a feature to automatically add the record to the timesheet favorites when the project manager assigns the Resource on the Project or to an Activity.

Configure Auto add to favorites

 This sections details out the setups required to be configured in order to use the Auto add to favorites functionality.

Parameter Setup

On the projects360 parameters two new parameters is added to activate this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets tab*
Go to *Timesheets > Setups > Timesheet parameters > General tab*

Fields	Description
Use favorites	When the parameter is marked, timesheet user can use option 'My favorites' on timesheets. This field is same as the standard field 'Use favorites' on the project accounting and management parameters. Modifying the field on either places will reflect changes on the subsequent forms.
Activate project resource assignment	When a Resource is assigned to a Project, a Favorite is created for that Resource automatically and will be deleted when Resource is Removed or Project is complete.
Activate project tasks assignment	When a Resource is assigned through the WBS tasks or through Resource forecast form, a Favorite gets created automatically and will be deleted when Resource is removed or task is complete.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets tab*
Go to *Timesheets > Setups > Timesheet parameters > General tab*

Fields	Description
Category default	When the Category default is set as 'From activity (mandatory)', 'Category' field on 'All favorites' form gets updated whenever there is a category modification on the work break down structure. When the Category default is set as 'From resource', 'Category' field on 'All favorites' form gets updated from resource.

Assign resource

All favorites form

When a Project manager assigns the Resource on the Project or to an Activity, a Favorite for the selected Resource is created automatically under Timesheet favorites form.

Go to Project management and accounting > Setups > Timesheets > All favorites

Go to Timesheets > Setups > All favorites

Finance and Operations

In all favorites form, record gets automatically created in the below situations:

1. When the resource is assigned from the 'Assign resource form' accessed through All projects form.
2. When the resource is assigned from the 'Work breakdown structure form' accessed through All projects form.
3. When the resource is assigned from the 'Resource forecast form' accessed through All projects form.

In all favorites form, record gets automatically deleted in the below situations:

1. When the resource is removed from the 'Assign resource form' accessed through All projects form.
2. When the project status is closed.
3. When the resource is removed from the 'Work breakdown structure form' accessed through All projects form.
4. When the assigned activity to the resource is closed.

All favorites – Category default

In all favorites form, modified category on work break down structure will get updated only when the parameter 'Category default' is set as 'Activity'. This is irrespective of whether the record is inserted automatically or through other means.

Copy timesheet – Category default

On timesheet lines, modified category on work break down structure will get updated only when the parameter 'Category default' is set as 'Activity' for the lines which is created through 'Copy timesheet'.

Resource Management

The features relating to resource management have been grouped together in this document. The projects360 features grouped together in this section are:

[Resourcing](#)

[SubContractor Reconciliation](#)

Select a feature to view more details about them.

HR Automated Events

Every time a new employee is hired in the organization, the User, User to worker relationship, Security roles, Employee Project Setup, Project Resource Record, Resource/Project Validation Groups, Cost Price Per Hour, Timesheet Periods, Vendor, and Employee Mapping to Vendor need to be setup. Much of this information can be defaulted as it is the same for every Worker.

With HR Automated Events activated, every time the Worker is created with a base set of information, a set of HR events will automatically setup the tables listed above. This automated triggering of setups works when setting up a Worker via the UI, and/or when integrating new Worker records from Data entities or Dynamics 365 Talent. A New Parameters form is available to default setups and differentiate between Employee and Contractor setups. Since this functionality involves creating Users and assigning Security roles, there's a special "HR automated events" security role required to modify the setups.

Configure

 This sections details out the setups required to be configured in order to use the HR automated events functionality.

Parameter Setup

On Human resource automated event parameters form in the human resources module, various parameters are defined to control HR automated events. Details of the fields are provided in the subsequent sections below.

Go to Human resources -> Setup -> Human resource automated event parameters

Details of the fields, tabs and buttons available on the form are as follows

Resource tab – All the fields available in section helps in creating a resource information once a new employee/worker is added to the system. Details of each fields in this section are as follows –

Fields	Description
Create Resource	Set this field to 'Yes' in order create the resource information automatically on the event of adding a new employee/worker in the system.

Period code	The value defined on this parameter will used as the default period code for all the new employee/workers created by automatic event.
Default category	The value defined on this parameter will used as default category for all the new employee/workers created by automatic event.
Max hour calendar	The value defined on this parameter will used as default max hour calendar for all the new employee/workers created by automatic event.
Require start/stop time	The Yes/No set on this parameter will used as default for all the new employee/workers created by automatic event.
Use effective labor rate	The Yes/No set on this parameter will used as default for all the new employee/workers created by automatic event.
Time card required	The Yes/No set on this parameter will used as default for all the new employee/workers created by automatic event.
Allow unit codes entry	The Yes/No set on this parameter will used as default for all the new employee/workers created by automatic event.
Calendar	The value defined on this parameter will used as default calendar for all the new employee/workers created by automatic event.
Enable project validation	The Yes/No set on this parameter will used as default for all the new employee/workers created by automatic event. If this field is set to 'Yes', the Resource/project validation groups field will be available for selection.
Resource/project validation groups	This is a multi-select dropdown button. A newly resources will be added to these groups automatically.
Enable category validation	The Yes/No set on this parameter will used as default for all the new employee/workers created by automatic event. If this field is set to 'Yes', the Resource/project validation groups field will be available for selection.
Resource/category validation groups	This is a multi-select dropdown button. A newly resources will be added to these groups automatically.

User tab – All the fields available in section helps in creating a user information once a new employee/worker is added to the system. Details of each fields in this section are as follows –

Fields	Description
Create	Set this field to 'Yes' in order create the user automatically on the event of adding an email ID on the

user	employee record.
Enable	The value defined on this parameter will used as the default all the new users created by automatic event.
Security roles	This is a multi-select dropdown button. A newly created user will be associated to these roles automatically.
Domain for email alias	Add the domain name. This domain name will be matched with the domain of the email ID entered on the employee record. If it matches, an user will be created an mapped the employee. Multiple domain can be defined where all the defined domain is compared to created the user record.

Vendor tab – All the fields available in section helps in creating a vendor once a new employee/worker is added to the system. Details of each fields in this section are as follows –

Fields	Description
Create vendor	Set this field to 'Yes' in order create the vendor automatically on the event of adding a new employee is added to the system.
Create employee mapping	Turn this field to 'Yes' in order to create a mapping between the vendor and respective employee.
Create bank account	Set this field to 'Yes' in order create the vendor bank automatically on the event of adding a new employee is added to the system.
Vendor group	The value defined on this parameter will used as the default vendor group for all the new vendors created by automatic event.
Employment active or past	The value defined on this parameter will used to create vendor for active or past employees.
Method of payment	The value defined on this parameter will used as the default method of payment for all the new vendors created by automatic event.
Terms of payment	The value defined on this parameter will used as the default terms of payment for all the new vendors created by automatic event.
Payment specification	The value defined on this parameter will used as the default payment specification value for all the new vendors created by automatic event.
Sales tax group	The value defined on this parameter will used as the default sales tax group for all the new vendors created by automatic event.

Resource pricing – All the fields available in section helps in creating a cost price for the resources as

soon as compensation data is added on to the employees. Details of each fields in this section are as follows –

Fields	Description
Create cost price	Set this field to ‘Yes’ in order create the cost price for the resources in the projects module. As soon as the compensation information is added to the employees, the hourly equivalent amount for the employee is added as cost price for the mapped resources in the projects module.
Use default category	Set this field to ‘Yes’ in order to default category while creating the cost price for the resources in the projects module.

Financial dimensions – “Inherit dimensions from position’ parameter helps in defaulting financial dimensions on the employees. when employee is assigned to a primary position, then the financial dimensions from position will automatically update the employee financial dimensions and when financial dimensions are updated for any existing primary position, then the employee financial dimensions will be automatically updated from the position financial dimensions.

Trigger Auto Events

✿ This sections details out the how each of the human resources automatic events are triggered and what sort of information is created.

Resource creation

As soon as an employee is created in the system, if the parameter is set to ‘Yes’, resource information is created automatically using the default information specified on the parameters. If the parameter is set to ‘No’, standard process of employee creation works as expected.

Vendor creation

As soon as an employee is created in the system, if the parameter is set to ‘Yes’, vendor information is created automatically using the default information specified on the parameters. If the ‘create employee mapping’ is set to ‘Yes’, then the relation between the employee and vendor is set. If the parameter is set to ‘No’, standard process of employee creation works as expected. While creating the vendor, some of the default information is taken from the parameters form.

Cost pricing information

This feature creates the resources automatically when a new employee is added into the application. After the employee is created and the compensation information is added for the employee, the hourly equivalent outcome from the compensation details used and added as a cost price for the mapped resource in the project cost price. This option is not available in the contractor tab.

New field is added on the New hire form “Known as” where the value gets defaulted while creating new resource.

Resourcing

A new experience has been introduced in Dynamics 365 for Finance and Operations projects360 suite, for Resourcing, which allows the resource managers and project managers to create resource forecasts and to schedule resources in two ways: resource based and project based. The assignment forms have been made user friendly which displays a 12 period window allowing manual updates for soft booking and hard booking of resources.

The new forms introduced in projects360 resourcing are as follows:

Resource forecast form.

Resource view form.

Project view form.

Intelligent work search form.

Intelligent resource fulfillment form.

Configure

✿ Before using the projects360 resourcing functionality, a few things need to be configured. This section details those setups.

Parameters Setup

There is a separate parameter form to set the setup for projects360 resourcing. This form can be accessed from following path:

Go to Project management and accounting > Setup > projects360 parameters

Go to Resourcing > Setup > Resourcing parameters

The screenshot shows the 'projects360 parameters' setup form. The breadcrumb trail is 'Project management and accounting > Setup > projects360 parameters'. The form is titled 'Set up parameters for resourcing' and is divided into several sections:

- RESOURCING**
 - Activate resourcing enhancements: ☒ Yes
 - Resource original budget: (dropdown: ORIG-Res)
 - Resource current budget: (dropdown: ORIG-WBS)
 - Resource ETC budget: (dropdown: FORE-Res)
 - Booking method: (dropdown: Hours per day)
 - Default resourcing dates by proj...: ☒ Yes
 - Activate enhanced forecast creati...: ☒ Yes
- INTELLIGENT WORK SEARCH**
 - Legal entity:
 - Role:
 - Hours available:
 - Skills:
 - Education:
 - Certificate:
- BOOK RESOURCE MULTIPLE TIMES**
 - Book resource multiple times: ☒ Yes
- DAY WEEK STARTS**
 - Day week starts: (dropdown: Monday)
- DISPLAY BOOKED HOURS**
 - Timesheet line level approval: ☒ Yes
- DEFAULT FILTERS**
 - Format for date range view: (dropdown: Week)
 - Show lines with zero hours: ☒ Yes
 - Show soft booking lines: ☐ No
- DEFAULT RESOURCE ROLE**
 - Timesheets: ☒ Yes
 - Hour Journals: ☒ Yes
 - Intercompany transactions: ☒ Yes
- UTILIZATION TARGETS**
 - Utilization target calculation met...: (dropdown: Working times)

The details of the parameters available on the this form are as follows:

Resourcing –

The below set of parameters can be defined to work with projects360 feature. These parameters allows to activate and configure the feature based on the user requirement.

- **Activate resourcing enhancement** – With options of yes and no. Yes, will activate the projects360 resourcing functionality.
- **Resource original budget** – Where the user can choose a forecast model to be the original resource forecast model.

- **Resource current budget** – The forecast model chosen for this will be used as the current budget model to which the resourcing modifications can be done.
- **Resource ETC budget** – The forecast model chosen for this field will be used to hold the transferred resourcing lines that are to be completed from the current forecast model.
- **Booking method** – There are two methods, “Estimated effort” and “Hours per day” based on which the resource hours can be booked. The Booking method chosen here is used for resource booking on resource forecast form.
- **Default resourcing dates by project dates** – When this option is selected, Start date and End date are defaulted from the projected start or end date or actual start or end date.
- **Activate enhanced forecast creation** – When this option is selected, New role creation will open a new form to create resource forecast records.

Intelligent work Search –

There is a new parameter to match score to default onto the Intelligent work search and Intelligent resource fulfillment forms. Where the users can enter the weightage against each attribute so that the same is matched while looking up resources when doing resource fulfillment. These values defined here will default onto the form.

- Legal entity
- Role
- Hours Available
- Skills
- Education
- Certificates

Book resource multiple times –

- **Book resource multiple time** – Set this field value to Yes in order book same resource more than one time in same project.

Default filters –

- **Format for date range view** – The format for date range view chosen in this field will be used to default on project view and resource view forms.
- **Show lines with zero hours** – When this check box is marked on parameters, ‘Show line with zero hours’ on project view and resource view form will default as marked.
- **Show soft booking lines** – When this check box is marked on parameters, ‘Show soft booking lines’ on project view and resource view form will default as marked.

Day week starts –

- **Day week starts** – When the day is selected in this field, will be considered as the start day of the week for the bookings along with the grid labels on the project view and resource view form.

Default resource role –

- **Timesheets** – When this parameter is marked, resource role will default on the timesheet lines from the resource forecast lines. Based on the role, sales price will be picked for the transaction.
- **Hour journal** – When this parameter is marked, resource role will default on the hour journal lines from the resource forecast lines. Based on the role, sales price will be picked for the transaction.
- *** Intercompany transactions*** – When this parameter is marked, resource role will default on the intercompany transaction from the resource forecast lines. Based on the role, sales price will be picked for the transaction.

Display booked hours –

- **Timesheet line level approval** – When this parameter is marked, Booked hours will be displayed on Timesheet line level approval form.

Utilization targets –

- **Utilization target calculation method** – This parameter defines whether the utilization targets should be calculated based on the working hours for each day defined in the working times or standard work day hours configured in the calendar.

A new form was added in resource roles to look up roles apart from the specified roles; it is called the dependent roles. This form is available as a button on the setup roles form, as shown in the subsequent sections.

Calendar Setup

New parameter 'Resource book hours' is added on the Calendar form which defaults the value in the 'Book hours per day' on the resource forecast form.

Go to Organization administration > Setup > Calendars > Calendars

Go to Resourcing > Setup > Calendars

Finance and Operations Preview				
Organization administration > Setup > Calendars > Calendars				
Edit + New Delete Working times Copy calendar Options				
Working time calendars				
Filter				
Calendar	Name	Base calendar	Standard work day in hours	Resource book hours
✓ EU7.5	EU7.5		7.50	2.00
	MaxWorking	24 Hour Maximum Work Tim...	24.00	0.00
	Standard	Standard	8.00	0.00
	TTest	Test	6.00	4.00
	USCalendar	United States Working Calen...	8.00	6.00

The details of the new field on this form are as follows:

- Resource book hours – This value will default in the 'Book hours per day' on the resource forecast form. If the Resource book hours is not mentioned then value updated in Standard work hours per day will be updated.

Add Category to Roles

In the resource role form the user can associate a category to a role, this will then default on the resource forecast line, when the role is selected.

Go to *Project management and accounting > Setup > Resources > Setup roles*

Go to *Resourcing > Setup > Setup roles*

Finance and Operations Preview				
Resourcing > Competencies > Setup roles				
Save + New Delete Configure characteristics Dependent role Translations Options				
Resource roles				
Filter				
Role ID	Description	Default role	Category	
✓ Business analyst	Business analyst	<input type="checkbox"/>	Consult	
Developer	Developer	<input type="checkbox"/>		
Project manager	Project manager	<input type="checkbox"/>	PM	
SA	Solution Architect	<input type="checkbox"/>		
Software developer	Software development engineer	<input type="checkbox"/>		
Team member	Default project team member role	<input checked="" type="checkbox"/>	QA	
Tester	Quality assurance engineer	<input type="checkbox"/>	QA	
TL	Technical Lead	<input type="checkbox"/>		

Dependent Role

A new Form was added in resource roles to look up for roles apart from the specified roles; it is called the dependent roles. This form is available as a button on the setup roles form, as shown in the below screenshot.

Go to Project management and accounting > Setup > Resources > Setup roles > Dependent role button

Go to Resourcing > Setup > Setup roles > Dependent role button

✓	Role ID	Description	Default role	Category
	Business analyst	Business analyst	<input type="checkbox"/>	Consult
	Developer	Developer	<input type="checkbox"/>	
	Project manager	Project manager	<input type="checkbox"/>	PM
	SA	Solution Architect	<input type="checkbox"/>	
✓	Software developer	Software development engineer	<input type="checkbox"/>	
	Team member	Default project team member role	<input checked="" type="checkbox"/>	QA
	Tester	Quality assurance engineer	<input type="checkbox"/>	QA
	TL	Technical Lead	<input type="checkbox"/>	

The user would have to choose a role and then click on dependent role, to choose the role that he would also like to look up for during the Intelligent resource/work form. So as per the screenshots, while looking up for Software developer role, even project managers will also be considered.

Dependent role | SOFTWARE DEVELOPER

Plan & Review

✿ Once you configure the resourcing setups, you need to start planning for the resources in the projects. This section helps you in understanding the resource planning process involved in projects.

Resource Forecast Form

The resource forecast form stores the project resource plan budget. In this form the resource manager/project manager can plan the resources who are required to complete the project and subproject. This form can be launched/opened from the below places:

- Projects Form.
- Project Management and approvals Workspace.
- Project Status Workspace.
- Manage projects workspace

The input into this form can be done in any of the below ways.

- Manually key in lines in the resource forecast form.
- From Work breakdown structure, after the auto generate team functionality is run, the lines generated from the auto generate team will be created into resource forecast form.
- When lines are added to the Team and scheduling tab on a project, the same information will be available in the Resource forecast form.
- When the project manager is assigned to a project, lines are added on the Resource forecast form with the resource role.
- Display PTO approved hours in the resource forecast form when PTO lines get approved from the approver, all PTO request lines will be created for the PTO project in resource forecast form.
- Records will be sorted based on the resource name.

The path to access the new form is only from a projects form –

Go to Project management and accounting > Projects > All Projects > Plan > Project resource > Resource forecast

Go to Manage projects workspace > Plan > Project resource > Resource forecast

Finance and Operations | Project management and accounting > Projects > All projects | USSI

In this form Project managers and Resource Manager can create new roles for a project/subprojects and allocate the hours for resources. The resource could be a planned resource or a named resource.

Resources are displayed based on the selected project. If the parent project is selected then all the assigned resources including subprojects resources are displayed.

Resource forecast is by default sorted based on Project, Role and Resource.

The above form is not linked to the project team and scheduling tab on the Project. Any updates to this form will not update the project team and scheduling tab on the Project form. To update this form, user required to execute standard batch process 'Synchronize resource capacity roll-ups'.

This form comprises of three sections:

Left hand section – Where all projects and subprojects will be listed from the current legal entity.

Right hand section – This section is further divided into two fast tabs Resource and Financial dimension.

Related information fact box – This section displays Total estimated hours, Total estimated sales fields, Total contract hours, Total labor contract value, Total hard booked hours, Total booked cost, Total booked sales, Gross margin. Total contract hours, Total labor contract value will display values based on the Labor reporting group selected on the parameters.

The section is called as “Resource”, the capabilities on this section are:

- New role – the user would be able to add new roles/lines on this form, where the data entry can be done. When the role is entered the associated category will be defaulted onto the line. The user can choose any of the roles defined in the resource roles form.

The screenshot displays the 'Resource forecast' section within the 'Finance and Operations' module. The breadcrumb trail indicates the path: Project management and accounting > Projects > All projects. The current view is for '00001053 : RES PARENT | My view (1)'. The left sidebar shows a tree view of projects and subprojects. The main area contains a table of resource forecast data.

- Split role – The entered role can be split into multiple lines and multiple roles, which will be helpful in creating similar lines for the multiple roles. The user will be given an option to enter the Role, Hours or FTE% that has to be split from the original resourcing line.

We have divided the split role form into 3 headers to provide more information on how the split is being done.

Original line – Displays the Role ID, Resource name, Estimated effort and FTE% of the selected line. All the fields will non editable.

New line – Displays the Role ID, Estimated effort and FTE% and Add line button. User can enter the desired Role ID, Estimated effort or FTE% to which line has to split. All the fields will be editable

Result after split – This section displays original lines along with the split lines where the Estimated effort, FTE% and Book hours per day are divided accordingly. All the fields will non editable.

- Delete role – the user will be able to delete the role when this option is chosen.
- Hard book – the user can use this option to hard book the estimated hours or per day hours for the resource and hours in the forecast get hard booked.
- Soft book – the user can use this option to soft book the estimated hours or per day hours for the resource and hours in the forecast get soft booked.
- Cancel reservations – This option will be used to cancel all the reservations made.
- Resource characteristics – where the skill set required for the resource can be selected and saved as the search criteria to be looked into when the resource is being fulfilled.
- Update prices – This option will be used to update cost price and sales price on the resource forecast record.
- Move resourcing dates – This option will be used to move resourcing dates forward or backward by day, week, day or years where all the bookings in the given period will be cancelled rebooked according to the new dates. We can also use option “Copy existing reservations” to move existing reservations.
- Copy to project – This option will be used to move the resource forecast records to multiple projects.

Copy to project will display below fields when the “Quick project search” parameter is unmarked on the projects360 parameters.

Under the Financial dimension section, If the Default dimension rules are configured then the same is respected on this form else financial dimensions from the parent project defaults on the sibling or child projects.

The Related information fact box section the following fields are available on the form:

- Total estimated hours – Displays the sum of the Estimated effort total hours from the lines.
- Total estimated sales – Displays the total value of the sales amount.
- Total contract hours – Displays total contract hours for the selected project. This will display based on the Labor reporting group set on the contract management tab of projects360 parameters.
- Total labor contract value – Displays total labor contract value for the selected project. This will display based on the Labor reporting group set on the contract management tab of projects360 parameters.
- Total hard booked hours – Displays total hard booked hours for all the projects in the hierarchy.
- Total booked cost – Displays total booked cost amount for hard booked hours.
- Total booked sales – Displays total booked sales amount for hard booked hours.
- Gross margin – Displays gross margin for the project.

Apart from the above capabilities, the following features also are available on the Resource forecast form:

- Project view – Project view will open to display the current project's project view details, which is the list of resources booked and to be booked on the project.
- Intelligent resource fulfilment form – Through Intelligent resource fulfilment form user can assign the resource onto the selected line, after matching the skill set of the required role and that of the resource.
- Resource view – The resource view form will open for all the assigned resource on the current project and will display the list of projects that the resource is booked on.

Resource forecast fields:

- **Project name** – Displays project name of the project.
- **Legal entity** – Legal entity where the resource booking line is being created. This lookup displays the legal entity where the intercompany is configured.
- **Role ID** – Role ID required for the project. Role ID lookup displays role ID description also.
- **Resource** – Resource lookup has been changed to include legal entity and role which makes the performance better. Lookup will now have the fields legal entity and role filters to search the resource from the lookup. Legal entity field displays legal entity where the intercompany is configured. Upon selecting the resource if the Role ID is blank, Role ID and category field will get updated based on the selected resource.
- **Resource name** – Displays the resource name of the selected resource.
- **Activity Number**: All activities must display on the activity number field which is associate with the selected project.

- Activity name – Displays Activity name of the activity number selected.
- Category – Category lookup displays all the hour type of categories. Category defaults from the roles, if category not available on roles then it will default from projects360 parameter form. After defining the Activity, category defaults from the Activity.
- FTE% – FTE% is brought in as 100% unless the user modifies the same. Lines from WBS is automatically created, using the auto generate team feature, for such lines FTE% is calculated while inserting the lines into resourcing. The users can then book the resources using resource view.
- Start Date – Start date of the resourcing forecast has to be entered by the user or will be defaulted from the project dates based on the parameter. This is a mandatory field.
- End Date – End date of the resourcing forecast to be entered by the user or will be defaulted from the project dates based on the parameter. This is a mandatory field.
- Estimated effort – Estimate effort field calculation will no longer be calculated based on start and end date. Estimate effort field is changed to user entry field where the user can enter value as required and search the resource from intelligent resource fulfillment from based on resource demand.
- Book hours per day – Book hours per day will default from the 'Resource book hours' field from project calendar before assigning the resource. If the resource books hours is not defined then the standard books hours will be defaulted. Once the resource is assigned, it will default from the resource calendar. This field is made user key in field so that user can enter the value as required.
- Booked hours – The hours the resource is booked for the project. This field includes both Hard booked and Soft booked hours.
- Booking type – Displays booking type of the resource.
- Cost price – Cost price of the resource forecast booking line. Cost price will default for the resource based on the price setup for both intercompany and non intercompany forecast.
- Sales price – Sales price of the resource forecast booking line. Sales price will default for the resource based on the price setup for both intercompany and non intercompany forecast.
- Booked cost amount – Displays booked cost amount.
- Booked sales amount – Displays booked sales amount.

Resource forecasts data entity

Two new Resource forecasts data entity has been created to import and manage the larger resource forecasts into the Resource forecasts view form.

1. One for resource forecasts records with resources called as 'Resource forecast' with target entity named as 'PMIPResourceForecastV2DataEntity'
2. Another for resource forecasts records without resources called as 'Planned resource forecast' with target entity named as 'PMIPPlannedResourceForecastDataEntity'. This entity will be deprecated soon as the functionality of this data entity can be achieved through using 'PMIPResourceForecastV2DataEntity'.

Resource forecasts – Open in excel option

An option is provided to the users to open the resource forecast records through open in excel options for add/update the bulk forecast records.

Resource View

The resource view form displays the booking or utilization of resources across projects. The resource manager/project manager will be able to view the resources and the work assigned to them in this form.

This form can be launched/opened from following places:

- Project form
- Resource forecast form
- Contractor, Employee forms. The view will be filtered for the selected resource record.
- Resource view is available as a separate form under projects360 > Project resources, where you will be able to see all resources and their project bookings.
- Project management and approval workspace
- Project status workspace
- Project tasks workspace (My Resource Assignment)
- Resource management workspace
- Resourcing > Resource booking > Resource view
- Manage projects workspace

The input to this form can be done in any of the below ways.

The user can enter values against the period block and either hard book or soft book the resources onto the project. User can filter the resources based on Resource name, role and legal entity.

This form comprises of three sections:

Left hand section – where all resources are listed from the current legal entity, and you can view:

- Name of the resource
- Resource role
- Legal entity of the resource

In the filter search, user can search with Resource name, Resource role and Resource legal entity.

Right hand section – This section is further divided into three sections:

Header Section – This fast tab shows the header details of the selected resource.

- Start date: Set the start date, to view the records in 'Resource summary' and 'Resource booking entry' for the selected date.
- Format for the date range: Defaults from the parameters. User can set the format date range to view 12-period bucket either in day, week or month view.
- Show line with zero hours: Defaults from the parameters. User can set Yes to show or No to hide the lines with zero hours in the resource booking tab
- Show soft booking lines: Defaults from the parameters. User can set Yes to show or No to hide the soft booking hours line in the resource booking tab.
- Navigation button: Navigation button helps to switch the period on the resource view form

Resource summary section – This fast tab will show the summary of the selected resource.

- Hard booked – will display the sum of hard booked hours for the selected resource for all the projects assigned.
- Soft booked – will display the sum of soft booked hours for the selected resource for all the projects assigned.
- Target hours – will display the hours that are defined in the setup form of Target hour utilization.
- Remaining – will display the remaining available capacity of the resource. This is the difference between booked and capacity.
- 12 periods – depending on the view settings, whether the same is for 12 days, 12 weeks or 12 months.

Resource booking tab – This grid allows user to enter hours for resource booking, booking can be done for soft booking as well as hard booking for all the projects assigned.

- Customer name – displays the customer name for the associated project record. The display of this field is based on quick project search configuration.
- Parent project – displays the root project id for the associated project record. The display of this field and field name is based on quick project search configuration.
- Project id – displays the project id for the associated resource forecast record.
- Project name – displays the project name for the associated resource forecast record.
- Resource name – displays the name of the resource booked on this project.
- Booking Type – displays the booking type for the associated forecast record. It displays two grid one for Hard booking type and another for soft booking type.
- 12 periods – depending on the view settings, whether the same is for 12 days, 12 weeks or 12 months.

The resource view form can be filtered by financial dimensions through the Filter by financial dimension button.

Apart from the above capabilities, the below buttons are also available on the Resource view form

New role – Once the user clicks on this button, New role gets created on the resource forecast form.

Book button – Once the user clicks on this button Hard book and Soft book hours are booked for the resource.

Project view button – Once the user clicks on this button, Project view form will be opened for a particular resource.

Project View

The project view form displays the booking or utilization of resources per project. The project manager/resource manager will be able to view all the resources assigned to the project and the work that has to be assigned will also be displayed in this view. The manager will be able to see both planned resource bookings (e.g. Developer 1, Business analyst etc.) and named resource bookings in this form.

This form can be launched from:

- Projects form.
- Resource forecast form.
- Project view is available as a separate form under projects360 > Project resources, where you will be able to see all projects and the related resource bookings.
- Project management and approval workspace.
- Project status workspaces.
- Resourcing module
- Manage projects workspace

Go to *Project management and accounting > projects360 > Project resources > Project view*

Go to *Resourcing > Resourcing booking > Project view*

Related information

Booking totals

- Total hard booked hours: 2,845.00
- Total booked cost: 268,960.00
- Total booked sales: 987,085.00
- Gross margin: 718,125.00

Labor contract totals

- Total contract hours: 1,100.00
- Total labor contract value: 300,600.00

This form comprises of three sections:

Left hand section – Where all projects will be listed from the current legal entity.

Right hand section – This section is further divided into three tabs:

Header Section – This fast tab shows the header details of the selected Project.

- Start date: Set the start date, to view the records in 'Resource summary' and 'Resource booking entry' for the selected date.
- Format for the date range: Defaults from the parameter. User can set the format date range to view 12-period bucket either in day, week or month view.
- Show line with zero hours: Defaults from the parameter. User can set Yes to show or No to hide the lines with zero hours in the resource booking tab
- Show soft booking lines: Defaults from the parameter. User can set Yes to show or No to hide the soft booking hours line in the resource booking tab.
- Navigation button: Navigation button helps to switch the period on the resource view form

Project summary section – This fast tab will show the summary of the selected project.

- Hard booked – will display the sum of hard booked hours for the selected project.
- Soft booked – will display the sum of soft booked hours for the selected project.
- 12 periods – depending on the view settings, whether the same is for 12 days, 12 weeks or 12 months.

Resource booking tab – This grid allows user to enter hours for resource booking, booking can be done for soft booking as well as hard booking.

- Project name – displays the project name for the associated resource forecast record.
- Legal entity – displays the legal entity of the resource
- Role ID – displays the role ID, which is defined on the resource forecast. Users can filter and sort records based on the Role.
- Resource name- displays the name of the resource booked on this project. Users can filter and sort records based on the name.
- Booking Type – displays the booking type Hard/Soft for the associated forecast record.
- 12 periods – depends on the view settings, whether the same is for 12 days, 12 weeks or 12 months.

The project view form can be filtered through button Filter by financial dimension. All the active dimensions get displayed for user to filter the projects with financial dimension. When the projects are filtered by the financial dimension, data on the parent project will not be rolled up.

After filtering the project view form through button Filter by financial dimension, user can use “Refresh project hierarchy” button to refresh and display all the projects without any filters.

The screenshot displays the 'Project view' form in the projects360 application. The form is divided into three main sections:

- Left Panel:** A list of projects with a search bar and a 'Filter by financial dimension' button highlighted with a green box.
- Center Panel:** The 'Project view' section, which includes a 'Project summary' table and a 'Resource booking' table. The 'Project summary' table shows data for 'Summary', 'Hard booked', and 'Soft booked' across different time periods. The 'Resource booking' table shows a list of resources booked on the selected project.
- Right Panel:** A 'Project dimension filter' dialog box, also highlighted with a green box. It contains dropdown menus for various dimensions: BusinessUnit, LegalEntity, CostCenter, Location, Customer, Project, Department, Vendor, Employee types, and Worker. The 'OK' and 'Cancel' buttons are at the bottom right.

The Related information fact box section the following fields are available on the form:

- Total hard booked hours – Displays total hard booked hours for all the projects in the hierarchy.
- Total booked cost – Displays total booked cost amount for hard booked hours.
- Total booked sales – Displays total booked sales amount for hard booked hours.
- Gross margin – Displays gross margin for the project.
- Total contract hours – Displays total contract hours for the selected project. This will display based on the Labor reporting group set on the contract management tab of projects360 parameters.
- Total labor contract value – Displays total labor contract value for the selected project. This will display based on the Labor reporting group set on the contract management tab of projects360 parameters.

Apart from the above capabilities, the below buttons are also available on the Project view form

Project view form has been converted into a tree view. The data on the subprojects is rolled-up to parent project. Also the default sorting has been set to Project ID and then resource name.

Book button – Once the user clicks on this button Hard book and Soft book hours are booked for the resource on the project.

Resource view button – Once the user clicks on this button, Resource view form will be opened.

Intelligent Resource Fulfilment Form

The Intelligent resource search form can be used for looking up resources with competencies. In this form the values of competencies required/requested: project competencies and the competencies of the resource – resource competencies will be displayed in the fact box section. This is place where the resource manager or project manager can view all the planned resource lines and find a matching resource for the same based on the match % of the competencies. More detailed explanation in the intelligent resource fulfillment section of the document.

This form can be accessed from the below locations:

- Project and management accounting > projects360 > Project resources > Intelligent resource fulfillment form.
- From the project on the Plan action pane in the resourcing group.
- From the Resource forecast form.
- Project management and approval workspace.
- Project Status workspace.
- Resource management workspace.

- Resourcing >Resource booking > Intelligent resource fulfillment form

The form has the following two fast tabs and details of each fast tab is listed below.

Project Tab – which displays all the lines with planned resources from resource forecast form. If there are any competencies mentioned in the line then the same is displayed under the respective competency as Project skills, project education etc.

- Legal entity – displays the legal entity of the project.
- Role – Role requested for the project is displayed.
- Customer name – displays the customer name for the associated project record. The display of this field is based on quick project search configuration.
- Parent project – displays the root project id for the associated project record. The display of this field and field name is based on quick project search configuration.
- Project ID – displays the project ID, which has lines that requires resourcing.
- Project name – displays the project name.
- FTE – FTE% that is defined on the resource forecast is displayed in this form.
- Start date – start date of the resource forecast, which is specified in the Resource forecast form.
- End date – end date of the resource forecast, which is specified in the Resource forecast form.
- Hours required – Hours to be copied from the resource forecast form per line will be displayed here.
- Filter by financial dimension button – Can filter projects by project financial dimension.

Resource Tab – Lists all the resources that have skill set required for the project. These are the recommended resources for the selected projects.

- Legal entity – Legal entity of the employee.
- Role – Role of the resource will be displayed in this field.
- Resource – Resource name.
- Hours available – Number of hours, resource is available is displayed in this field for the requested start and end date.
- Match in % – This percentage will be calculated and displayed. The calculation is a percentage of the resource competencies over the project competencies. The match percentage takes into consideration the points/scores given to each competency and based on the matching resource competency the weightage is arrived at.

Example: The Parameters defined are as follows:

Skill – 75

Education – 60

Certificate – 75

Legal entity – 50

Role – 25

Hours available – 25

And if the actual values entered are as follows:

Skill – 75

Education – 0

Certificate – 75

Legal entity – 50

Role – 25

Hours available – 15

Then the Match % = (Total Actual Score * 100) / Total Parameters Score]

$(75+0+75+50+25+15) * 100 / (75+60+75+50+25+25) = 77.41\%$

- Match scores – The above percentage value is expressed in points in this field.
- Assign resource button – The selected resource will be assigned to the project forecast line using this button. Once the line is updated with the resource, the same is reflected in the Resource forecast form.
- Match score button – When the user clicks on this button a new form opens where the competencies weights default from the parameters and is editable. The edited values will be used as weights to arrive at the matching points.
- Update role – When the user clicks on this button a new form opens where the role can be defined to update on the existing record.
- Filter by financial dimension – Can filter the resources by resource financial dimension.

Resource skill search scores

Parameters

Skill	50.00	Legal entity	10.00
Education	75.00	Role	25.00
Certificate	50.00	Hours available	30.00

The fields and the buttons on the match score button is as shown below. The values in the competencies will default from the parameters, which the user can edit to search resources per requirement.

- Legal entity – weightage for Legal
- Role – weightage for role
- Hours available – weightage for hours available.
- Skills – weightage for skills
- Education – weightage for education

- Certification – weightage for certification
- OK button – OK button, when the user clicks on the same the Match calculation if performed.
- Cancel button – The action is cancelled.

Intelligent Work Search Form

The Intelligent work search form can be used for looking up work for resources, after checking whether the work required competencies match that of the resource.

In this form, the values of competencies required/requested – project competencies and the competencies of the resource – resource competencies will be displayed in the fact box section.

This form can be accessed from the below locations

- Project management and accounting > projects360 > Project resources > Intelligent work search form.
- Human resources – worker, contractor, employee forms.
- Resource management workspace.
- Resourcing > Resource booking > Intelligent work search form

The form has two fast tabs and details of the these tabs are as follows:

Resource Fast Tab – Lists all the resources in all the legal entities. Fields available under these tabs are:

- Legal entity – Legal entity of the employee
- Role – Role of the resource will be displayed in this field.
- Resource – Resource name

- Filter by financial dimension button – Can filter resource by resource financial dimension.

Project Fast Tab – Displays all the lines with planned resources from resource forecast form. If there are any competencies mentioned in the line then the same is displayed under the respective competency as Project skills, project education etc. Fields available under this tabs are:

- Legal entity – displays the legal entity of the project
- Role – Role requested for the project is displayed
- Project ID – Displays the project id, which has lines that has to be resource fulfilled.
- Project name – Displays the project name
- FTE – FTE% that is defined on the resource forecast is displayed in this form.
- Start date – start date of the resource forecast, which is specified in the Resource forecast form.
- End date – end date of the resource forecast, which is specified in the Resource forecast form.
- Hours available – Hours that the resource is available for the start and end date on the line.
- Match in % – This percentage will be calculated and displayed. The calculation is a percentage of the resource competencies over the project competencies. The match percentage takes into consideration the points/scores given to each competency and based on the matching resource competency the weightage is arrive at.
- Assign project button – The selected project forecast line will be assigned to the resource using this button.
- Filter by financial dimension button – Can filter projects by project financial dimension.
- Match score button – Similar to what in the Intelligent resource fulfilment form.

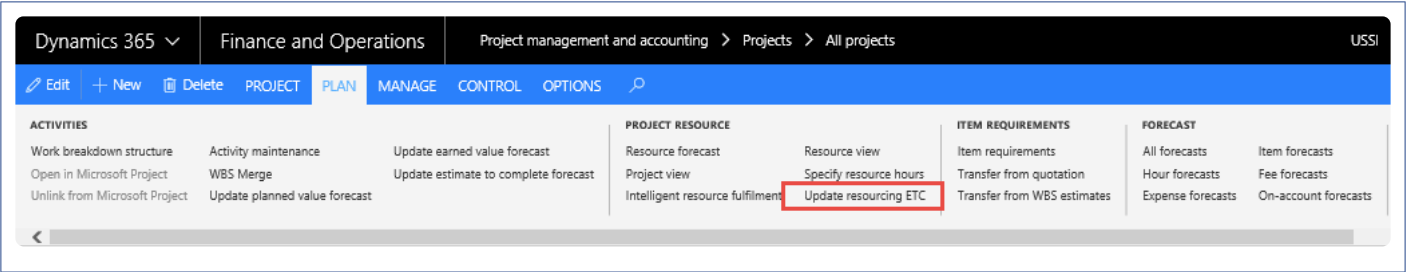

Periodic Process

✳ Once the resources are planned and reviewed, there are periodic processes to run that moves the data to correct places so that inquiries can be performed on them. This section details out those periodic processes.

Update Resourcing ETC

The Update resourcing ETC is used for moving the Estimate to complete resourcing lines into a separate forecast model file. ETC stored in a separate forecast model will give the project managers the total estimate to complete and how much more work is still pending per project. This form can be launched from the project and also under the periodic menu too.

- Go to *Project and management accounting > All Projects > Plan tab > Project resource section > Update resourcing ETC.*
- Go to *Project and management accounting > project360 periodic > Resourcing periodic > Update resourcing ETC.*
- Go to *Resourcing > Update resourcing > Update resourcing ETC.*

Once clicked on the Update resourcing ETC button, below form opens.

Update resourcing ETC

Parameters ^

UPDATE RESOURCING ETC

Resourcing ETC model

T_Forecast

Records to include v

Run in the background v

OK Cancel

This form's functionality and calculations involved are as follows:

- The estimate to complete considers the hours from the Project booking form lines for transfer, irrespective of whether there is a worker or not.
- All the booked hours including the hours booked beyond the resource forecasted end date are considered for transfer to forecast.
- If there is a worker on the resource line – then the last non-draft timesheets are considered, as the from date to be more precise the date after the end date of the timesheet into the future. Only booked hours are considered for transfer to forecast. For example, if the resourcing line has 15th Aug to 31st August, then the last non draft timesheet of the worker is 21st August (Timesheet period – 15th to 21st) then the data for 22 is considered till 31st August.
- All the attributes that are there on forecast model which are being used for grouping is taken into consideration for grouping of the transactions that are transferred to forecast form.
- The parameters for copying will be taken from the Forecast model, similar to WBS Updates to forecast models for the Estimate to complete.
- Grouping of copied lines to be either in days, weeks, months or Total (one summarized line), whatever option is defined on forecast model.
- The pricing also to be picked from either the source transaction or from the pricing tables as specified on the Forecast model.
- The forecast model to be used for copying to is defined on the parameter in projects360 parameter under Resourcing group.

Resourcing Workspaces

* projects360 suite provides various workspaces from where the resources can be planned, reviewed and managed. This section highlights all the workspaces involved in the resourcing.

Workspaces

There have been changes to projects360 workspaces to show the resourcing forms depending on the user roles, such as project manager or resource manager. A new workspace has been created only for resourcing for the role resource manager.

Resource Management Workspace

A new workspace has been introduced for Resource manager to be able to use all of the resourcing enhancements from one place.

The screenshot displays the Dynamics 365 Resource Management workspace. The top navigation bar shows 'Dynamics 365', 'Finance and Operations', 'Project management and accounting', and 'Resource management'. The left sidebar contains a 'Summary' section with eight tiles showing resource counts: 133 Resource list, 43 Intercompany resource list, 3 Intelligent resource fulfillment, 3 My resource view, 10 Planned resource, 31 Named resource, 6 My resource list, and 940 My employee missing timesheet. The main area shows a 'List' view of resources with columns: Resource name, Resource ID, Sales price, Cost price, Worker type, Calendar, and Period types. The list includes resources like Aaron Con, Abhishek V, Adam Carter, and others.

Resource name	Resource ID	Sales price	Cost price	Worker type	Calendar	Period types
Aaron Con	000409	300.00	180.00	Employee	GAP	EmpWeek
Abhishek V	000713	300.00	180.00	Employee	Standard	EmpWeek
Adam Carter	000402	300.00	180.00	Employee	Standard	EmpWeek
Adam Carter	000402	300.00	180.00	Contractor		EmpWeek
Adriana Giorgi	000405	300.00	180.00	Employee	GAP	EmpWeek
Alfons Staerk	000425	300.00	180.00	Employee		EmpWeek
Alice Ciccu	000349	300.00	180.00	Employee	Standard	EmpWeek
Alistair Speirs	000301	300.00	180.00	Employee		
Allie Bellew	000359	300.00	180.00	Employee	Standard	EmpWeek
Allison Brown	000386	300.00	180.00	Employee	Standard	EmpWeek
Ann Beebe	000342	300.00	180.00	Employee	Standard	EmpWeek
Anna Bedecs	000343	300.00	180.00	Employee	Standard	EmpWeek
Ariene Huff	000413	300.00	180.00	Employee	Standard	EmpWeek
Armando Pinto	000471	300.00	180.00	Employee	Standard	EmpWeek
Bonnie Kearney	000351	300.00	180.00	Employee	Standard	EmpWeek
Bonnie Skelly	000356	300.00	180.00	Employee	Standard	EmpWeek
Britta Simon	000378	300.00	180.00	Employee	Standard	EmpWeek
Carlos Carvalho	000404	300.00	180.00	Employee	Standard	EmpWeek
Catherine Boeger	000383	300.00	180.00	Employee	Standard	EmpWeek
Chase Carpenter	000400	300.00	180.00	Employee	Standard	EmpWeek

This workspace has the below contents.

1. Tiles

- Resource list: Gives a count of all the resources in the current legal entity.
- Intercompany resource list: Gives a count of resources where the intercompany setups are done, so

the resource could be borrowed from those companies.

- Intelligent resource fulfillment: Launches the intelligent resource fulfillment form.
- My resource view: Filters the resource view for the logged in user.
- Planned resource: Filters the resource view and displays it for only planned resources.
- Named resource: Filters the resource view and displays only the named resources. Gives a count as well.
- My resource list: displays all the resources for whom the logged in user is the timesheet approver.

2. List

- Resource role: takes you to the form where the list of resources along with the resource ID and role is displayed. It also has the sales price, cost price, worker type, calendar, period types, and source legal entity.
- The buttons available on the resource role section are:
 - Resource role: to create new roles
 - Skills: to create new skills
 - Certificates: to create new certificates
 - Education: to create new educational qualifications
 - Intelligent work search: Intelligent work search form will open on click of this button

3. Links

- Resource competencies are provided as links on the this workspace and has following options to view and update.
 - Skill
 - Certificate
 - Role
 - Education

Project Management Workspace

Resourcing forms have been linked to the project management workspace to be able to use resourcing enhancements.

From Project management workspace, the following forms can be viewed:

- My project view – Tile: Where the project view is filtered for the projects where the logged in user is a project manager, will be visible.
- Resource forecast: for the selected project in the My projects list page.
- Project view: for the selected project in the My projects list page.
- Intelligent resource fulfillment: for the selected record in the My projects list page.
- Resource view: for the selected record in the My projects list page.

Project Status Workspace

Resourcing forms have been linked to the project status workspace to be able to use resourcing enhancements.

From Project status workspace, the following forms can be viewed:

- Resource forecast: for the selected project on the Project ID field.
- Project view: for the selected project on the Project ID field.
- Intelligent resource fulfillment: for the selected project on the Project ID field.
- Resource view: for the selected project on the Project ID field.

Project Tasks Workspace

Resourcing forms have been linked to the project tasks workspace to be able to use resourcing enhancements.

- My resource assignment tile: Resource view filtered for the logged in user will be displayed on this tile.

Subcontractor Reconciliation

A reconciliation process is required to keep track of time spent by contractors, who belong to a vendor, against the related vendor invoices.

This reconciliation will help in approving the invoice for payment if the user can reconcile the vendor's invoice against the vendor employee's timesheets that is the time logged by the employees. This also includes Intercompany transactions for reconciliation.

Configure

✿ Before using the sub-contractor reconciliation functionality, a few things need to be configured. This section details out those setups.

Parameters Setup

Go to *Project management and accounting > Setup > projects360 parameters > Transactions*

The screenshot displays the 'projects360 parameters' configuration page under the 'Transactions' tab. The left sidebar lists navigation options: Invoicing, Simple adjustments, Work breakdown structure, Resourcing, Timesheets, Transactions (selected), Qualification, and Billing schedule. The main content area is titled 'Set up parameters for transactions' and contains several sections:

- SUBCONTRACTOR RECONCILIATION** (highlighted with a red box):
 - Activate subcontractor timesheet... ☒ Yes
 - Activate subcontractor expenses... ☒ Yes
 - Reconciliation difference threshold: 0.05
- PRICING ENHANCEMENT**:
 - Activate pricing enhancements ☒ Yes
- REVENUE RECOGNITION SCHEDULE**:
 - Activate revenue recognition s... ☒ Yes
- DIMENSION INHERITANCE**:
 - Custom project dimension: Projects (dropdown)
- AUTOMATIC TRANSACTIONS**:
 - Activate automatic transactions ☒ Yes
 - Expense journal name: PrjJm (dropdown)
 - Fee journal name: FEE (dropdown)

Note – If any one of the check boxes are selected, the subcontractor reconciliation feature will be enabled. Based on the selection of checkboxes, the transaction types available for reconciliation will be restricted.

Select “Activate subcontractor timesheet reconciliation” checkbox or “Activate subcontractor expenses reconciliation” in Subcontractor reconciliation group to activate reconciliation for either timesheet or expenses or both.

Define “Reconciliation difference threshold” field to process the reconciliation which will allow a difference equal either to positive or negative “Reconciliation difference threshold” amount value.

Setup Vendor Groups for SubContractors

Go to *Accounts payable > Vendors > Vendor groups*

Vendor groups

Filter

Vendor group ↑	Description	Terms of payment	Time between invoice due...	Default tax group	Exclude from se...	Subcontractor
10	Preferred vendors	Net30	Net30		<input type="checkbox"/>	<input type="checkbox"/>
20	Regular vendors	Net15	Net15		<input type="checkbox"/>	<input checked="" type="checkbox"/>
30	Other vendors	Net10	Net10		<input type="checkbox"/>	<input type="checkbox"/>

Once the parameter is marked on the parameter setup window, the Subcontractor field will be available for selection on this form. Select the vendor group which includes subcontractor vendors for this functionality to work against that vendor group.

Link Vendor to a Contractor

Go to *Human resources > Workers > Contractors > select the contractor > Contract Employment tab.*

Reconcile Invoices with Timesheet

* This topic explains how the invoice journals or open vendor invoices are reconciled with the timesheets.

SubContractor Reconciliation form from Invoice Journal

After the contract employees have entered their time, it will be available for reconciliation on the invoice journal or open vendor invoice from the vendor associated to the contractor. The SubContractor Reconciliation form is available in the below location.

Go to *Accounts payable > Invoices > Invoice journals > Lines*.

The screenshot shows the 'Vendor invoice journal' in Dynamics 365. The 'Functions' menu is open, highlighting 'Subcontractor reconciliation'. Below, a table lists invoice lines. The first line, dated 8/15/2017 for 'Countryside Company' with invoice 'INV_456', has the 'Subcontractor reconciliation' checkbox checked.

Account	Account name	Date	Invoice	Description	Debit	Credit	Currency	Offset account type	Offset account	Sales tax group	Item sales tax group	Subcontractor reconciliation
US_SI_000007	Countryside Company	8/15/2017	INV_456			5,000.00	USD	Ledger	110180-003----			<input checked="" type="checkbox"/>

The reconciliation checkbox will be available only when the vendor belongs to the vendor group where the sub-contractor reconciliation checkbox is marked.

Mark the checkbox for the Subcontractor reconciliation button to be enabled under the Functions button.

Click on the button to open the Subcontractor reconciliation form. Header section will look like below:

The screenshot shows the 'Subcontractor reconciliation' form header. It includes search and clear buttons, date and contractor filters, and summary amounts. The 'TRANSACTION TYPE' dropdown is open, showing 'All', 'Hours', and 'Expense' options.

DATE	OTHERS	AMOUNTS
From date	Project ID	Invoice excluding tax: 5,000.00
To date	Contractor	Remaining amount to reconcile: 5,000.00

TRANSACTION TYPE: All (selected), Hours, Expense

Below are the fields available at the header section of the form. All of these fields serve as filters to fetch the

right data for reconciliation of the invoice with the hour/expense transactions entered by the sub-contractor.

Field name	Description
From date	Select the date, to view all transactions from this date is displayed in the Overview pane. If left blank, all transactions related to vendor subcontractors is available on Overview pane.
To date	Select the date to view all transactions till this date displayed in Overview pane. If left blank, all transactions related to vendor subcontractors is available in the Overview pane.
Contractor	Select the identification of the contractor. View the list of all contractors attached to the vendor who is selected on the journal line.
Project ID	Select the identification of the project. View the list of all projects available on projects form. Projects are available from all the legal entity.
Remaining amount to reconcile	Updates with amount set on journal line. This amount is positive when entered credit amount for journal and negative when entered debit amount for journal. This amount decreases to extent of timesheet records marked for reconcile.
Invoice excluding tax	Update the total invoice amount excluding taxes
Search button	Click this button to search criteria given on above columns gives results on Overview pane.
Clear button	Click on this button will clear all search criteria given on the header on subcontract reconciliation form
Reconcile all	Click to select all records and reconcile all of them.
Clear all	Click on this button will clear all the records which is selected for reconcile.
Transaction type	Selection of transaction type will display view list of all projects transaction based on selection transaction type. All selection display all the hour as well as expense transactions.

Lines section will look like below:

ussl	Hour journal	000409	Aaron Con	PM	00000187	7/27/2017	200.00	10.00	2,000.00	<input type="checkbox"/>

Fields available on the lines section are as follows:

Field name	Description
Legal entity	Legal entity of the origin transaction will display on this field.
Transaction origin	View the transactions that generated the voucher.
Personnel number	Number of the contract worker, based on the filter entered in the search section.
Name	Name of the contractor worker.
Category	Category with which the timesheet has been booked is displayed here.
Project	Provide entries for project selected on criteria. If no project selected on criteria, all projects will be listed.
Project date	Transaction date.
Hours	Lists the hours booked by contractor.
Cost price	Lists the cost rate of hours booked by contractor.
Total cost amount	Cost price multiplied by hours.
Reconcile	Select this checkbox makes timesheet entry available for reconcile. Once this checkbox is

	selected for a record, the related amount gets deducted from total amount remaining for reconcile.
--	--

	Notes -
	The Amount remaining to reconcile field has 5000 amount. All timesheet entries are available in the Overview pane and only marked lines are available for reconcile
	The Hours records entered for the contractor will be shown only if the Activate subcontractor timesheet reconciliation checkbox is selected, and for the expenses, select the Activate subcontractor expenses reconciliation checkbox

Unless amount remaining is zero, the system will not allow posting the journal. Thus, only once an invoice is fully reconciled can it be posted. Also when any line is selected for reconciliation, it will not be available for selection in the next vendor invoice or invoice journal.

SubContractor Reconciliation in Open Vendor Invoices

Subcontractor reconciliation functionality has been extended to Open vendor invoices. The functionality is similar to what is available in the Invoice journal form. The subcontractor reconciliation button is enabled on the action pane when the vendor selected in the invoice belongs to the Vendor group that is selected as subcontractor.

When the subcontractor checkbox is selected on the line, it will be available for reconciliation in the Subcontractor reconciliation form, which will open if you click the subcontractor reconciliation button on the Action Pane.

However, the Subcontractor reconciliation button will be disabled if there is a project attached to the line. The reconciliation available in this form is per line.

Note – Unless the amount to reconcile is zero, the user will not be able to post the transaction.

Enhancements to SubContractor Reconciliation functionality

VAT on SubContractor Reconciliation invoice

VAT that is included on the invoice that is being used for Subcontractor reconciliation transaction, will consider only the amount excluding taxes for reconciliation. For example, if the invoice total amount is \$150 and VAT is \$30, the reconciliation process will take \$120 into account for reconciliation.

Multi-Currency Transactions

SubContractor Reconciliation will support multi-currency scenario for Account payable invoices when transaction currency is different from the accounting currency.

Intercompany Transactions

SubContract Reconciliation form will support inter-company transactions posted against contractor. The following logic applies while selected intercompany transactions to reconcile in AP vendor invoice.

Timesheet:

For intercompany: Pick the cost price/cost amount from the Timesheets.

For non-intercompany: Pick the cost price/cost amount from the hour transactions table.

Expenses:

For Intercompany: Pick the cost price/amount from Expense report (Amount in MST).

For Non-intercompany: Pick the cost price/amount from Expense transactions table.

Report

This section details how the reports can be printed to verify the reconciled and un-reconciled data.

SubContract Reconciliation Report

Subcontract reconciliation report will show the unreconciled transactions based on the Given filter, data will be grouped on the following fields:

- Expenses
- Hours
- Vendor

Selection criteria for report

Go to the project and management accounting > Project+ Inquiries and reports > Subcontractor reconciliation.

Time Management

All the features relating to projects360 time management have been grouped together in this section. The projects360 features that are grouped together in this section are:

[Manage Pending Time](#)

[Timesheet Integrations](#)

[Personal Time Off](#)

[PTO Balances](#)

[Work Location](#)

[Timesheet Line Approval](#)

[Late Timesheet](#)

[Time Export](#)

Select a feature to view more details about them.

Daily timesheet

projects360 introduces a new feature, which allows users to quickly enter time on daily basis and submit. This new form provides insight of pending time and submitted time where user can change the timesheet period and look at the time information on daily basis. User has a flexibility to create overtime lines and copy options. This feature controlled through a parameter..

Configure daily timesheet

 To start using Daily timesheet entry feature, user needs to perform specific setups. This section details the configuration process.

Parameter Setup

On projects360 parameter form, under Timesheets tab, a new parameter “Activate daily timesheet entry” has been introduced to enter daily timesheet and submit the timesheets. User needs to set the ‘Activate daily timesheet entry’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets*

The screenshot shows the 'Set up parameters for timesheets' configuration page. The 'DAILY TIMESHEET' section is highlighted with a green box, showing the 'Activate daily timesheet entry' checkbox set to 'Yes'. Other sections include 'PERSONAL TIME OFF', 'OVERTIME', 'WORK LOCATION', 'MANAGE PENDING TIME', 'COMMENTS FOR PENDING TIME', 'COMMENTS FOR TIMESHEET', 'UNIT CODES', and 'TIME CARD'.

Fields	Description
Activate daily timesheet entry	When this check box is enabled, user can enter daily timesheets.
Show line property	When this check box is enabled, Line property field will be displayed on the daily timesheet entry form.
Show for multiple funding source	When this check box is enabled, Customer name will be picked from the project when the project contract has multiple funding source to display on the daily timesheet entry form.

Enter daily timesheet

 This section shows how to enter daily timesheets with various options and submit timesheets.

A new form 'Daily timesheet entry' is added which allows users to quickly enter time on daily basis and submit. This new form provides the details on how many hours is pending to submit and the submitted hours. User has an option to change the timesheet period and look at the time information on daily basis. Similar options are provided to to copy the timesheet from the previous timesheet or favorites or from assignments.

This form can be accessed following the below path:

Go to Project management and accounting > projects360 > Timesheets > Daily timesheet entry

Details of the buttons available on the Daily timesheet entry form are as follows –

Fields	Description
Change timesheet period	This option will allow user to change the timesheet period.
Submit all time	This option allows users to submit all the time entered.
My timesheets	This option open all the timesheet of the logged in user.

Details of the fields available on the Timesheet tab are as follows –

Fields	Description
Resource	Displays logged in resource name.
Timesheet period	Displays the current timesheet period.
Pending hours	Displays sum of all the pending hours for the timesheet period.
Submitted hours	Displays sum of all the submitted hours for the timesheet period.

Details of the fields available on the Week summary – Total hours section are as follows –

Fields	Description
Hours type	Displays the hours type whether 'Regular hours' or Overtime type' hours.
Date with day	This field will display the dates based on the selected work week.
Total	This field will display the total quantity for a hour type.

Details of the buttons available on the Daily timesheet entry tab are as follows –

Fields	Description
New line	Add a new line to the daily time entry.
New overtime line	Add a new overtime line in daily time entry.
Remove	Remove the selected line from the daily time entry.
Copy from	Open a menu that contains the following items: <ul style="list-style-type: none"> • Timesheet – Copy timesheet lines from an existing timesheet. • My favourites – Create new timesheet lines by using the timesheet settings that is saved as favorites. • Copy from assignments – Create a new timesheet line from previously assigned projects and activities.
Save as favorites	Save timesheet lines as favorite to use later in daily time entry.
Chat with project manager	Allows to chat with project manager.
Submit time	Submit the selected timesheet line.

Details of the fields available on the Daily timesheet entry tab are as follows –

Fields	Description
Overtime	Display overtime icon to identify the overtime entry.

Legal entity	Defaults with the current legal entity. User can select the required legal entity.
Date	Defaults with current date and has an option to change.
Main project name	Display main project name of the selected project ID.
Search	Search functionality is added to quickly search the projects by filtering. This is available when 'Quick project search' is enabled on projects360 parameter.
Project ID	Select the project ID to enter hours.
Project name	Display project name.
Work location ID	Enter the work location ID.
Activity number	Select activity number.
Category	Defaults category. User has an option to select category.
Hours	Enter hours.
Internal comment	Enter internal comments.
External comment	Enter external comments.
Line property	Display line property.

Details of the fields available on the Submitted timesheet entry tab are as follows –

Fields	Description
Overtime	Display icon to identify overtime submitted.
Legal entity	Display legal entity of the submitted timesheet line.
Main project name	Display main project name.
Project Id	Display project ID.
Project name	Display project name.
Work location ID	Display work location ID.

Activity number	Display activity number.
Category	Display category.
Days along with dates. (Mon/Tue/Wed/Thu/Fri/Sat/Sun)	Display hours submitted on a particular day.
Total hours	Display sum of hour submitted for all the days.
Create daily time entry	New daily timesheet line will be created defaulting the values from the selected record.
Line property	Display line property.

Apart from the above fields on the Overview tab, there are tabs which displays the timesheet information based on the days. Related fact fox displays the hours for the timesheet period as standard.

Manage Pending Time

Entering timesheets on a daily basis or soon after a task is completed is an inefficient process for the users as there are so many required fields to be updated and saved. Finally on the day of submission of timesheets, the users spend a lot of time trying to recall all the activities worked during the week/period or quickly look at their mailbox/calendars to recall details of the tasks.

To overcome this issue, some people make note of all the activities/time spent on various activities in an MS Excel workbook, notepad, etc. Then they manually re-type it all in the timesheets when they have to submit their time for approval.

projects360 introduces a new feature, which allows employees to save their pending timesheets in Microsoft Dynamics 365 for Finance and Operations and then transfer the information to timesheets. This feature is not driven or controlled by any parameters. Any timesheet user is able to use this feature.

Configure Auto submit

On projects360 parameter form, under Timesheets tab, a new parameter “Timesheet auto submit to workflow” has been introduced to submit the timesheet automatically when the user transfers the time from Manage pending time. User needs to set the ‘automatic submission of timesheet’ field value to ‘Yes’ in order to use this feature.

Parameter Setup

In the projects360 parameters, under the Timesheets tab, ‘Timesheet auto submit to workflow’ and ‘Maximum number of timesheets per period’ fields will be available.

Go to Project management and accounting > Setups > projects360 parameters > Timesheets

Go to Timesheets > Setups > Timesheet parameters > Financial tab

The screenshot displays the 'projects360 parameters' configuration page for the 'Timesheets' tab. The interface includes a sidebar with navigation options like Invoicing, Simple adjustments, Work breakdown structure, Resourcing, Timesheets (selected), Transactions, Qualification, Billing schedule, Unit billing, and Communication. The main content area is titled 'Set up parameters for timesheets' and contains several sections:

- Set up parameters for timesheets:** Includes a toggle for 'Timesheet auto submit to workflow' set to 'Yes'.
- LATE TIMESHEETS:** Features a 'Missing timesheet template' dropdown set to 'LateTime' and a 'Timesheet approval template' dropdown set to 'LatetimeAA'.
- CUSTOMER NAME:** Includes a toggle for 'Show for multiple funding sources' set to 'Yes'.
- MANAGE PENDING TIME:** Includes a toggle for 'Timesheet auto submit to workflow' set to 'No' and a 'Maximum number of timesheets' input field set to 0.
- COMMENTS FOR PENDING TIME:** Includes a toggle for 'External comment is required' set to 'No'.
- COMMENTS FOR TIMESHEET:** Includes a toggle for 'External comment is required' set to 'No'.
- TIME CARD:** Includes a toggle for 'Activate time card entry' set to 'Yes'.

Fields	Description
Timesheet auto submit to workflow	When this check box is enabled, timesheet lines will get automatically submitted when the user transfers manage time lines from the manage pending time form to the actual timesheet. Depending upon this parameter, button on the manage pending form will be displayed. If the parameter is 'Yes', the button will be named as ' Submit time ' and if the parameter is set to 'No' then it will read as ' Transfer to timesheet '.
Maximum number of timesheets per	This field represents the maximum number of times the user can create the timesheets. This field will get cleared when the 'Timesheet auto submit to workflow' is enabled. This field can be used when the user needs to create multiple timesheet lines for the same timesheet period.

period	
External comment is required (under comments for pending time)	If this enabled, then external comments become mandatory prior to transferring your time to timesheets. This parameter is also validated at the time of submitting a timesheet, if this is set to yes, then you need to enter external comments on the timesheets prior to submitting it to workflow.
Internal comment is required (under comments for pending time)	If this enabled, then internal comments become mandatory prior to transferring your time to timesheets. This parameter is also validated at the time of submitting a timesheet, if this is set to yes, then you need to enter external comments on the timesheets prior to submitting it to workflow.
External comment is required (under comments for timesheet)	If this enabled, then external comments become mandatory on the timesheets prior to submitting it to workflow.
Internal comment is required (under comments for timesheet)	If this enabled, then internal comments become mandatory prior to submitting it to workflow.
Show for multiple funding source	When this check box is enabled, Customer name will be picked from the project when the project contract has multiple funding source to display on Manage pending time form.

Track Pending Time

This section shows the various ways provided by this feature to keep track of the time spent on day to day activities and how to use those options.

A new form has been added for a timesheet user to book time with as minimum data as possible and to update later when it is being transferred to actual timesheets in Microsoft Dynamics 365 for Finance and Operations.

In this form the user will have all the projects that have been setup as favorites available on the left hand side and there will be a generic node called “Unassigned project” which has the sub-node as “Unassigned category/Unassigned task”. The user can create pending lines under any of the nodes, so that the values on the nodes will default onto the pending line created.

The user updates the project name and other details in a line that is under the unassigned node, and it will appear as a new node, upon save/refresh. Such lines can then be added as favorites using the manage favorites button. On this form after the records are updated completely with all of the required information to create a timesheet, the user can transfer lines to timesheet.

There is an option to import all the meetings from an outlook calendar, excluding meetings/events that are marked as personal and all-day events.

Keep reading this article to explore the capabilities of this form.

Work location

Work location name

There are two sections on this form. The left hand side represents the projects, activities and categories in tree format, whereas the right hand side is again divided into two sections involving header and line details respectively.

Tree Section

On top of the left hand side of the form, the filters are available and tree of the time entered. This tree is built depending on the data that is being saved on the right hand side of the form. When the form is opened for the first time, only the unassigned project node will be available. However, if there are any timesheet favorites for the logged in User/Employee, then those favorites also will appear as nodes on the tree. The fields on the tree as follows:

Field: First level of tree	Description
Projects	Root Node. It is always Projects as the text. Collapsing this node will collapse the entire tree.

Field: Second level of tree	Description
Project name	The project name is displayed, when no project is selected it is displayed as Unassigned Project.
Legal entity	Legal entity of the project is displayed next to the project name when the project is selected.
Project ID	Project ID of the project is displayed next to the legal entity when the project is selected.

Copyright © 2024 HSO | ProServ

Page 301 of 981

Field: Third level of tree	Description.
Category name	Category name is displayed if the same is selected on the line. When there is no selection the same appears as “Unassigned category”.
Activity name	Activity name is displayed if it is selected on the line. When there is no selection, it appears as “Unassigned task”.

Data can be filtered on this section using the filters provided. Details are as follows:

Filters	Description.
Project	Filter/search records for the Project name.
Category/Activity	Filter/search can be either for the category name or activity name.

The right hand section of the form is divided into header and line section.

Header section – General

In the header section the employees can add or remove lines to book their time. The timesheet user can either enter the time manually or use the Timer functionality available – Start timer – Captures the real time spent on the task. The time captured by the timer can be edited by the employee by using the Edit timer option. The fields available in this section are as follows:

Field	Description
Date	Date on which the time has been spent.
Hours	Number of hours spent on the task manually entered by the employee.
Timer Hours	Not editable field. Data populates in this field when the Start and stop timer is used. The time is calculated between the click of start and stop timer.
Internal comments	Internal comments, entered by the employee.
External comments	Comments, entered by the employee.
Project name	Name of the project is displayed in this field. This is a read only field.
Activity name	Name of the activity is displayed in this field.
Customer name	Name of the customer is displayed in this field. This is a read only field. Customer name will be displayed from the project if the if the parameter show for multiple funding sources is marked

Buttons available on this section are as follows:

Buttons	Description
Add	Click to add new lines in the form.
Remove	Click to remove lines from this form.
Start timer	Click on this button to start the timer and timer will start tracking time. Once the task is over, the same button now appears as Stop timer. More details on this functionality is here .
Edit timer	When the user clicks on this button, a new form opens where the user can see the captured time hours.
Assign lines to favorites	When the user clicks on this button a new form is opened, – “Assign lines to favorites” which allows the timesheet user to quickly update the unassigned lines with the projects and details that have been added as favorites. More details on this functionality in sections below.
Transfer to timesheets	<p>The selected line or lines will be transferred to timesheet or submitted to workflow provided all the required fields are available for the creation of a timesheet. Once the record is transferred to timesheet or submitted to workflow, it disappears from this form. When there is missing information, it is displayed as an error messages and the timesheet is not created until the form is updated.</p> <p>Depending upon a ‘Timesheet auto submit to workflow’ parameter on projects360 parameters form, the label on button changes. If the parameter is ‘Yes’, the button will be named as ‘Submit time’ and if the parameter is set to ‘No’ then it will read as ‘Transfer to timesheet’.</p>

Line Section – Details

In this section, the details of each line is available such as the project ID, category ID and activity details. Users can key-in the details for selected line in this section. The fields available on this section are:

Field	Description
Entity	Entity ID lookup.
Entity name	Field is not editable. Based on the entity selected in the above field the information is populated.
Project	Project ID lookup displaying the projects available in the selected legal entity.
Project name	Displays the project name. Field is not editable.
Activity	Activity lookup, displaying all the activities for the selected project.
Activity name	Displays the activity name. Field is not editable.
Category	Category id look up.
Category name	Displays the category name. Field is not editable.

Work location	Work location lookup, if this feature is turned on.
Work location name	Displayed the work location name. Field is not editable.
Internal comments	Editable field, defaults what has been entered at the header level.
External comments	Editable field, defaults what has been entered at the header level.

The employee/user enters data in this form and then when all the relevant information is updated, use the buttons on the top of this form to perform further actions. Buttons available on action pane are as follows:

Buttons	Description
Save	Saves records on the form.
Import calendar appointments	Allows users to import the calendar appointments from Outlook (Office 365). More details on this functionality can viewed here .
Manage Favorites	Provides ability to define the favorites from the projects available on the tree. More details on this functionality can viewed here .
Transfer all to timesheets	Transfers all nodes and its lines into timesheets. Where there are lines with required fields not updated, nothing is transferred to timesheets and the message detail displays the details for the transfer being unsuccessful.
My timesheets	Allows to open 'My Timesheets' form where user can see all the timesheets created with the employee associated with the user.

Some of the sub-functionalities available in this feature are as follows:

Capture time using Timer

Timer button is provided on the header section to precisely track the time spent on an activity. To use this functionality, users have to add a new line or select an existing line and start the timer. Before starting, the timer button will appear in a start state (green color) and once its starts running will be represented stop state (red color).

There is fact-box available on the form to display the details for the currently running timer or the previous run details. This fact box has been introduced so that the user can continue to use manage pending time form, but also monitor the time ticking against the line in which the timer is runner. Users can stop the timer from the fact-box also.

Start timer button available on the selected line. Before starting the timer, timer button will look like as shown in below screenshot:

Once the timer is running against the selected line, timer button will look something like as shown in below screenshot:

Below visual showing the fact-box details of the current or previous timer run.

Also, there is an edit timer button available on this form to review the details. This button will be disabled while timer is running. Edit timer helps in reviewing and managing the captured hours. Each run is stored in separate line enabling users to review and confirm timer usage. There could be possibilities that the users have accidentally started the timer or didn't stop it at the right time. In these cases edit timer helps in manually editing the lines to reflect the accurate hours.

The hours captured through the timer run are stored on the 'Timer hours' column. This column shows data in HH:MM format and is converted into key-able format which the timesheet form accepts (but this is just an approximation). Once hours are captured using timer, users have to manually enter the reciprocal time into the hours column before transferring the line to timesheet.

Import from Outlook (Office 365)

Manage pending time feature provides ability to import calendar appointments from Outlook (Office 365) account. In order to use this functionality, a system administrator needs to set exchange web services URL on the Microsoft Exchange Server parameters (*Organization administration > Setup > Microsoft Exchange Server synchronization > Microsoft Exchange Server parameters*) form.

Once the user hits the 'Import calendar appointments', a new form opens up to facilitate this process. On this new form users have to select/define period and calendar for which the data needs to be imported. For period selection, current week, previous week and date range options are available. Once the user selects current or previous week option, From date and To dates are auto filled based on the system date. For date range option, user has to enter in the dates. User can copy the appointment title on the manage pending time and option is provided to copy to Internal comment field, External comment field or into both fields.

Manage Favorites

This function provides the ability to define new favorites or remove an existing favorite for the logged in user. Once the user clicks on 'Manage favorites' button, a new slide form opens. This slide out form displays favorites assigned to the logged in user individually or as a group, and all the lines on the tree (provided lines have project, activity and category defined).

Records that are already saved as favorites will have this checkbox enabled against them. From this window, the user can mark or un-mark the line as favorite or remove it as favorite respectively. Remove from favorite action can be performed only on the individual favorites and not on the group or all favorites.

Mobile app

A simplified mobile workspace is provided to capture the time while you're on the go. Time is entered on the mobile app and reflected on the pending time form.

Import from Excel or Microsoft Flow

Users can record time in an Excel workbook and import the hours into the Pending time form periodically. The corresponding Data entity used for the Excel import also allows for other integration scenarios, such as a Microsoft Flow process.

Quick Project Search

This new feature was designed to allow users to quickly search any project on timesheets and expense reports through various filters such as Customer name, Contract name, Project name, etc.

“Quick project search” is configured in the projects360 parameters form. Once you turn on the Quick Project Search feature, a new search icon lights up on Timesheets and Expense reports for you to use. You can now quickly search the project to submit time or expense and this provides a quicker experience in submitting time and expense for your employees.

This is a key feature for A/E/C firms where large project structures are created with multiple levels of sub-projects and many of their sub-projects across different main projects have similar names.

Configure

 This section helps in configuring the required parameters to turn on the quick project search functionality on the timesheets and expense reports.

Parameter Setup

A set of parameters are introduced in the projects360 parameters under the Quick project search tab to configure search functionality on the timesheets and expenses reports. This quick search functionality will list out all the projects (based on the searched text) in an hierarchical order enabling user to select the right project while submitting their time and expense.

Go to *Projects management and accounting > Setups > projects360 parameters > Quick project search tab.*

Below are details of the fields available on this tab –

Field name	Description
Quick project search	This field allows to activate the quick project search functionality on timesheets and expense reports.
Intercompany project search	Enabling this parameter will allow searching the desired project across all the legal entities. If this is off then, search will look for only project within the current legal entity.
Customer name	If parameter is turned on, projects can be search on the timesheets and expenses reports based on customer.
Project contract name	If parameter is turned on, projects can be search on the timesheets and expenses reports based on project contract.
Project name – level 0	If parameter is turned on, projects can be search on the timesheets and expenses reports based on root/base project.
Project name – level 0 title	Once you enable the ‘Project name – level 0’ parameter, this field will enabled for you enter a friendly name to be shown the timesheets and expense report search window.
Subproject name – level 1	If parameter is turned on, projects can be searched on the timesheets and expenses reports based on level 1/sub-projects.
Subproject name – level 1 title	Once you enable the ‘Subproject name – level 1’ parameter, this field will enabled for you enter a friendly name to be shown the timesheets and expense report search window.
Subproject name – level 2	If parameter is turned on, projects can be searched on the timesheets and expenses reports based on level 2/sub-subprojects.
Subproject name – level 2 title	Once you enable the ‘Subproject name – level 2’ parameter, this field will enabled for you enter a friendly name to be shown the timesheets and expense report search window.
Project ID	If parameter is turned on, projects can be search on the timesheets and expenses reports based on actual Project ID.
Project name	If parameter is turned on, projects can be search on the timesheets and expenses reports based on actual Project name.

Existing data update

All the clients who has created projects prior to activating this feature or upgrading from previous version needs to mandatorily run a onetime batch process. This batch process will update the relevant/required quick project search tables facilitating the use of the feature in different places in application. Batch job can be found at the following menu path –

Go to Projects management and accounting > projects360 Periodic > Insert data for quick project

Using Search

✿ This section helps in understanding how the quick project search functionality works on the timesheets and expense reports.

On Timesheets

Once the Quick project search is activated on the parameters, timesheet lines section will have a search button in the third column. Once user clicks on the search button, a new form with the title 'Project search' opens up allowing the users to find and select the right project where they want to submit time.

Also, once the Quick project search is activated and 'Customer name' parameter is turned on then, 'Customer ID' and Name' field will be replaced with "Customer name" field on the timesheet. Similarly when 'Project name – level 0' parameter is turned on, then 'Project name – level 0' title defined field will be displayed on the timesheet.

Once on the Project search form, users will see the fields configure on the projects360 parameters. We can search for the desired project on any of the fields available. Once user enters the search text and tabs off, the process will display/list all the projects containing the entered text in the below grid.

To make a project selection, users either can double click on the first field on the grid or make use of select button at the bottom of the form. The selected project will be filled in on the timesheets line section.

Project search

When search is performed on the Project name – level 0/main project.

Timesheet Integrations

projects360 has build the timesheets integration data entities to import the timesheets data from external time management systems. This data entity can be used from data management or directly from the integration form.

With the 8.1 release, timesheets Integration experience has an improved user interface and data entity changes. The Data Entity has new text fields that search in multiple ways for a matching value – for example, Resource can be searched by ID, name and email. The Timesheet Integration form for investigating integration errors design has been simplified.

With the new data entity changes, the Integration Manager can decide whether the hour lines should directly create timesheets or be available as pending transactions on the integration form.

Import Timesheet Records

This section details how the timesheet records from external time management systems can be imported into the Microsoft Dynamics 365 for Finance & Operations.

Timesheet Integration Data Entity.

The timesheet records can be imported into the Microsoft Dynamics 365 for Finance and Operations using the 'Timesheet Integration' data entity created to facilitate this process.

Before you create an import project under the Data management for timesheet integrations and run the import process, download or prepare the file\data from external time management systems. The file should have following fields:

Fields	Description
External comment	User can keyin the external comments on this column.
Internal comment	User can keyin the internal comments on this column.
Date	Provide a date for timesheet line.
Project type	
Submitted hours	Enter the hours you intend to submit to timesheet.
Resource	Enter the resource for whom this line needs to be created. On this field, you can enter Resource name, Personnel number, Email ID of the resource or the Email ID of the user associated with the resource.
Project legal entity	Enter the legal entity of the project, where the project on this line exists.
Timesheet legal entity	Enter the legal entity where the timesheet record is created.
Project text	Enter project against which this line needs to be recorded. You can use Project ID or Project name to get to the right values.
Activity text	Enter activity against which this line needs to be recorded. You can use Activity ID or Activity name to get to the right values.
Category text	Enter category against which this line needs to be recorded. You can use Activity ID or

	Activity name to get to the right values.
Work location text	Enter work location against which this line needs to be recorded. You can use Activity ID or Activity name to get to the right values.
Transfer to timesheet	This field accepts 'Yes' or 'No' values. If 'Yes', a timesheet line can be created, provided there are no errors on the line. 'No' will retain the line on Timesheet integration form.

Timesheet Integration sample file can be found [here](#).

Note – None of the fields in the timesheet integration data entity are mandatory, so if leave fields empty integrations will still go ahead and create the records on the timesheets integration form. On integration form, you edit the records accordingly and transfer them to timesheet.

Process to Import Timesheet records.

The process to import the timesheet records is as follows.

1. Navigate to Workspaces > Data management > Import.

The screenshot shows the Dynamics 365 interface for Data management. The breadcrumb trail is: Dynamics 365 > Finance and Operations > System administration > Workspaces > Data management. The 'Import / Export' section is active, with the 'Import' button highlighted. The 'Data projects' table is displayed with the following data:

Data project name	Project type	Project category
PMBI_deCustomer	Export	Project
Document parameter	Export	Project
MultiTS import	Import	Project
TS Import	Import	Project
TS Export	Export	Project
time	Import	Project
DDR	Export	Project
PTO Balances Import	Import	Project
PTO Balances	Export	Project
PMBI_All	Export	Project
TSEXP	Export	Project
Timesheet Integrations	Import	Project

2. Enter group name and description in the import tab\section.
3. Click Add file on the selected entities tab\section.
4. Enter 'Timesheet Integration' entity name.
5. Click upload and add to select and upload the source data file.
6. Once the information is loaded, close out the form.

The screenshot shows the 'Import Timesheets' form in Dynamics 365. The 'Import' tab is active. The 'Add file' dialog is open, showing the 'Upload data file' section with a file named 'Timesheet integration...' selected. The 'JOB DETAILS' section shows 'Entity name' as 'Timesheet integration', 'Source data format' as 'EXCEL', and 'Default refresh type' as 'Full push only'. The 'Close' button is highlighted.

Error log

Date	Description
------	-------------

We didn't find anything to show here.

Timesheets from integration form has following sections:

Timesheet Grid

Shows all the imported records in this grid. Most of the fields on this grid are editable, except the timesheet number and source. Timesheet number field is updated on successful transfer of line to the timesheet. Source field updated to 'Data entity' for all records on this form coming from either excel import or through the PSA

integrations. Data on this grid filtered with status as not 'Processed' and source as 'Data entity' by default.

Line Details Grid

This section of the form shows the data related to the line selected on timesheet grid. All text fields i.e. Project text, Activity text, Category text, work location text and resource are editable, but we advise not editing them as these fields are the reference of what was imported. Even if the imported values do not resolve to correct value, user can make the right selection by looking at these fields. Selecting the right fields, will not replace values in text fields.

Error Log

This section of the grid shows the errors related to the line selected on timesheet grid. If the selected line has multiple issues, those lines of error will be displayed against that line in this grid.

Buttons available on this form are as follows:

Buttons	Description
Save	Allows you to save the changes to the records.
Delete	Allows you to delete the selected records.
Change Status	Once you rectified the errors on the lines, use this button to change the line status from 'Error' to 'Draft'. You can use button on the multiple selection as well, but make you are selected only the error records.
Create timesheet	Use this button to transfer the selected records to timesheet. User can select multiple records at a time to transfer them to timesheet.
Timsheet log	Opens a timesheet log window, where users can the errors releated to the selected line. If user has tried to transfer the lines multiple times and ended up with errors every-time, that history can be seen in this window.

Personal Time Off

This feature has been developed to allow employees to send in their personal time off (PTO) request to their managers. A new workflow is available to control the approval process of PTO. PTO details are also available with this feature.

To classify the approvers being set up in the workflow, the same has been introduced at the worker level, where new Approver fields have been introduced to set up the approval, for timesheets, purchase requisitions and expenses. PTO can be approved by any of the three types of approvers.

Approved PTO's are reflected in the resource plan and are also imported into timesheets automatically based on the projects360 parameter "Automatically populate in timesheets".

Configure Time Off

✿ To start using *Personal time off* feature, user needs to perform specific setups. This section details the configuration process.

Parameter Setup

Under the projects360 parameters, user has to turn on the personal time off field to use this feature. This field is by default turned off.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheet tab*.

Go to *Personal time off > Setups > Personal time off parameters > General tab*.

The screenshot shows the 'Projects+ parameters' setup page in Dynamics 365. The sidebar on the left lists various parameters, with 'Timesheets' selected. The main content area is titled 'Set up parameters for timesheets' and contains three sections:

- PERSONAL TIME OFF**: Contains two toggle switches. The first is 'Activate personal time off' with a 'Yes' label and a toggle switch set to 'Yes'. The second is 'Automatically populate in timesheets' with a 'Yes' label and a toggle switch set to 'Yes'.
- DEFAULT CATEGORY**: Contains a dropdown menu labeled 'Category default' with 'None' selected.
- WORK LOCATION**: Contains three toggle switches. The first is 'Show work location on timesheet lines' with a 'Yes' label and a toggle switch set to 'Yes'. The second is 'Show work location on timesheet tra...' with a 'Yes' label and a toggle switch set to 'Yes'. The third is 'Work location is required' with a 'Yes' label and a toggle switch set to 'Yes'.

- Select the activate Personal time off check box to enable PTO feature.
- Select the Automatically populate in timesheets check box to populate the approved PTO lines in the timesheets of the resources.

Marking Project Groups to be of type Personal Time Off

A check box is introduced in the project group to indicate that the group is a PTO project group. In the General Fast Tab, select the Personal time off check box in the Project group form to select it to be of the type PTO. All projects belonging to this project group will be implied to be of the type PTO and will be available in the

project lookup on the PTO requisition form.

Go to Project management and accounting > Setups > Posting > Project group.

The screenshot shows the Dynamics 365 Project groups setup form. The left sidebar contains a list of project types: Cost, FP_CompC, FP_CompP, FP_SL, FP_WBS, Investment, PTO, and Sebaticide. The main area is titled 'Project groups' and shows the 'PTO' project group. The 'General' section includes fields for Project type (Time and material), Ledger posting search priority (Category), Default line property (NonBillabl), Personal time off (Yes), Line property search priority (Project), and Verify cost against remaining forecast (No). The 'Ledger' section includes fields for Post costs - hour (Profit and loss), Post costs - item (Profit and loss), Accrue revenue - hour (No), Accrue revenue - item (No), Post costs - expense (Profit and loss), On-account invoicing (Balance), Accrue revenue - expense (No), and Accrue revenue - fee (No). The 'Estimate' section includes fields for FIXED-PRICE, REVENUE RECOGNITION, SET UP CATEGORIES FOR ESTIMATE, and Profit.

Setup Approvers

New fields have been introduced on the Worker form to set up the approvers for the selected worker. The “Assign approver” button opens the Approver setup form, where approvers can be assigned for different kind of documents.

Fields on the Approver setup window are as follows:

Timesheet Approver: The user setup in this field will be the approver of timesheets for the selected worker.

Expenses approver: The user setup in this field will be the approver of expenses for the selected worker.

Requisition approver: The user setup in this field will be the approver of Purchase requisitions for the selected worker.

PTO approvers can be any of the above, as generally the timesheet approvers are the PTO approvers, this flexibility has been provided.

Go to Human resources > Workers > Worker and select the Employee record for whom you want to set the PTO approver.

Go to Resourcing > Setup > Workers > Worker and select the Employee record for whom you want to set the PTO approver.

Create Personal Time Off Request Workflow

Personal time off request workflow can be created to track track the approvals, rejection and delegations. To enable and configure the personal time off workflow, follow the below steps:

Go to Project management and accounting > Setup > Project management and accounting workflow.

Go to *Personal time off > Setup > Personal time off workflow.*

On the Action Pane, click New button.
Select the PTO requisition in the Select form and then click on Create workflow button.

Set up the workflow as it would be set up in Standard, In the Assignment form in the Assignment type tab, choose the assignment to be Participant.

Close

Note – Setup the Assignment to be as Participant even for timesheets and expenses Workflow as well, if the approver should be the one that is set in the Worker form.

Request Time Off

This section describes how the Personal time off is requested and which windows helps us in completing these tasks.

All Time Off Request form

New forms have been introduced in the projects360 module for users to request for Personal time off. On the Personal time off request form, users should only be able to see their own requests and create the new requests. These requests can be submitted to workflow for approvals if required/configured.

Go to Project management and accounting > projects360 > All time off requests.

Go to Personal time off > My time off request > New time off request.

Go to Personal time off > My time off request > My time off requests.

✓	Requisition date	Start date	↓ End date	Resource name	Approval status	Total hours
	4/12/2019	4/8/2019	4/11/2019	Usha Ravindra Rao	Draft	32.00

Personal Time Off Request

This section of the form allows the user to request for PTO and submit to workflow.

Details of the fields available on the Personal time off List are as follows:

Field	Description
Requisition Date	View the date when the requisition has been made.
Start date	Displays start date of the PTO period in which the leave has been requested.
End date	View the end date of the leave.

Worker name	View the name of the worker availing leave.
Approval status	View the status of the PTO request workflow/approval
Total hours	View the total hours requested as leave.

Details of the buttons available on the Personal time off List are as follows:

Button	Description
New PTO	Click to open a new PTO request form.
Edit	Click to edit the lines.
Delete	Click to delete a PTO request line.
Cancel	Click to cancel the workflow.
Workflow	Click to submit the workflow.
Export to Microsoft Excel	Click to export the PTO lines to excel.

To create a new Personal time off request, click on the New PTO icon and the below PTO request form opens.

Personal time off taken

Filter: [Search]

Start date	End date	Category	Project ID	Hours
We didn't find anything to show here.				

Details of the fields available on the Personal time off are as follows:

Field	Description
-------	-------------

Start date	Date from which the PTO is being requested. The user can select the date using the calendar icon. The dates should be more than the current system date.
End date	Date till which the PTO is being requested. The user can select the date using the calendar icon. The dates should be more than the current system date.
Project ID	User must select the Project they are\will be working during the period they are requesting the PTO.
Project name	View the project name.
Requisition date	The date the PTO request is submitted.
Category	Initially it will be empty, category will default based on selected activity for the project.
Category description	View the description of the selected category. This will be read only.
Activity number	Specify the activity for the selected project, done by the user.
Activity name	View the description of the selected activity.
Hours	Updated sum of hours from the PTO Lines form.
Employee name	View the name of the employee requesting for PTO.

Lines button

The user can click on this button to view the break-up of PTO requested at day level. The user can edit these lines and the same will become the PTO total. For instance, if the PTO request is for 3 days, the user can click on lines and update one of the days to 4 hours, then the PTO request will be for 2.5 days.

Field	Description
Date	Display of each day in the PTO request.
Hours	The number of working hours specified for the selected day.

Once the details are filled, the user should submit the PTO line. The Standard workflow process should be followed to approve the PTO request lines.

Once the PTO requests are approved, then the same lines will be reflected in the resourcing forms/ views, in case the projects are marked as Include in tree for resourcing.

Personal Time Off Taken

This section of the form displays the information of Personal Time Off Taken by the user. Data in this grid will be sorted based on the descending order by Start date.

Field	Description
Start date	Date from which the PTO is being requested. The user can select the date using the calendar icon. The dates must be more than the current system date.
End date	Date till which the PTO is being requested. The user can select the date using the calendar icon. The dates should be more than the current system date.
Category	View the categories assigned to the selected project. In case of no categories are assigned, then all the categories of the legal entity are displayed here.
Project ID	Select the project for which the request has been made. Only projects belonging to the project group marked as PTO will be displayed here.
Hours	View the total hours that are calculated based on the PTO request.

PTO data entity

New data entity 'Personal time off request' is created with target entity as 'PMIPPersonalTimeOffRequestEntity' to import personal time off records into Personal time off requests form.

PTO Lines in the Resource Forecast form

In the Resource forecast form the Personal Time Off requested hours are copied for the same days as it is in Personal Time Off form.

Go to Project management and accounting > projects360 > Resource forecast.

	GBSI	Team member	Aaron Con	000409	gbsi	W00004751	QA	100.00	8/14/2017	8/17/2017	32.00	32.00	472.66
	USSI	Software developer				W00004752	WebDev	100.00	8/3/2017		0.00	0.00	180.00

Each Resource will be listed only once in the resource forecast for the PTO project. If the resource already exists, new PTO requests get added to the existing line's booked hours on the resource forecast form.

Automatically Populate Personal Time Off lines into the Timesheet

When the parameter to automatically populate in timesheets is turned on, the approved PTO Lines with the project and the rest of the details along with hours will be populated on the timesheet for the requested period. The logged in user will be able to edit the hours on timesheets. Once the PTO line is populated on timesheet line and posted, again if timesheet is created for same period, PTO line will not getting populated. Below is the form where user can see the details.

Inquire Time Off

✳ Once the setups are done and personal time off is requested, this section show how the Personal time off requests are inquired and actions pertaining approval, delegation and rejections are taken on them.

Personal Time Off Request

All the Personal time off requests are shown in the Personal time off requests inquiries form under the inquiries of Project module. The user can filter the Inquiry form with the employee name who has requested for Personal time off requests.

Go to *Project management and accounting > Inquiries > projects360 > All time off requests.*

Go to *Personal time off > Inquiries > All time off requests.*

Finance and Operations

Project management and accounting > projects360 Inquiries and reports > All time off requests

8/3/2017	8/7/2017	8/10/2017	Aaron Con	Approved	32.00
8/3/2017	8/3/2017	8/4/2017	Aaron Con	Approved	16.00
7/28/2017	7/4/2017	7/12/2017	Aaron Con	Draft	56.00

Some of the buttons and tabs related to personal time off requests on this workspace are as follows:

- New Personal Time Off Request button: Click to open new Personal Time Off Request form to create a Personal Time Off Request.
- My Draft Personal Time Off Request Tile: My draft Personal Time Off Request tile displays all requests in draft for the logged in user.
- My Personal Time Off Requests tab: My Personal Time Off Request will display all the Personal time off requested by logged in user.
- Open Personal Time Off button: Click to open selected Personal Time Off Request record.

PTO Balances

From projects360 8.0 release onwards, we have added a new feature to import the PTO balances from external HR or payroll systems. A data entity called 'PTO balances' is created to facilitate this import process. PTO data can be imported on a periodic basis from an external system and is shown on the fact box in the Microsoft Dynamics 365 finance and operations.

Once imported, the PTO balances can be viewed by expanding the fact box on the following forms:

Personal time off request.

Personal time off request Inquiry.

My resources PTO requests.

All Timesheets, and

My Timesheets.

A fact box is introduced to display the PTO balances data on above mentioned forms. The fact box displays the information for the selected resource on the form. If multiple records are selected together, then the fact box will not display any information. This fact box has two columns, which are Type and Balance. These two columns contain the information about the type of PTO records and balances from the last imported date respectively.

Also, list pages are introduced on the workspaces to display this data. 'My PTO balances' on the projects360 tasks workspace displays the information for resources assigned to the logged in users and on the resource management workspace, 'My employee PTO balances' list page is added. This list page displays the PTO balances of all the resources for whom the logged in user is defined as an timesheet approver.

Configure PTO Balances

✿ To start using Personal time off balances feature, user needs to perform specific setups. This sections details out the configuration process.

Parameter Setup

In the projects360 parameters, under the Timesheets tab 'Activate PTO balance' checkbox is available to control this feature.

Go to Project management and accounting > Setups > projects360 parameters > Timesheet tab.

Go to Personal time off > Setups > Personal time off parameters > General tab.

The screenshot shows the 'projects360 parameters' configuration page. The left sidebar lists various modules: Invoicing, Simple adjustments, Work breakdown structure, Resourcing, Timesheets (selected), Transactions, Qualification, Billing schedule, and Unit billing. The main content area is titled 'Set up parameters for timesheets' and contains several sections:

- PERSONAL TIME OFF**: Includes 'Activate personal time off' (Yes), 'Automatically populate in timesheet' (No), 'Activate PTO Balance' (Yes, highlighted with a green box), and 'Display balances' (Yes).
- ANNUAL HOLIDAYS**: Includes 'Activate annual holidays' (Yes).
- OVERTIME**: Includes 'Activate overtime entry' (Yes), 'Overtime category' (OT), 'Overtime line property' (Demo-NB), 'Overtime pay code' (empty), 'Activate overtime validation group' (Yes), and 'Overtime type is required' (No).
- DEFAULT CATEGORY**: Includes 'Category default' (Standard logic) and 'TIME EXPORT' (Require timesheet audit trail: Yes, Include unposted hours: Yes, Identification type: empty).
- AUTOMATICALLY MANAGE FAVORITES**: Includes 'Use favorites' (Yes), 'Activate project resource assignment' (Yes), 'Activate project tasks assignment' (Yes), and 'DAILY TIMESHEET' (Activate daily timesheet entry: Yes, Show line property: Yes).
- MANAGE PENDING TIME**: Includes 'Timesheet auto submit to workflow' (Yes).

Mark the 'Activate PTO balance' to enable this feature. By default this checkbox turned off. In order to use the PTO balances feature, turn on 'Activate PTO balance' checkbox.

Mark the 'Display balances' to view the PTO balances on the transactions. 'Display balances' check box can be marked only when Activate PTO balance parameter is marked.

Import PTO Balances

This section details how the PTO balances can be imported into the Microsoft Dynamics 365 for Finance & Operations.

PTO balances data entity and structure

The PTO balances can be imported into the Microsoft Dynamics 365 for Finance and Operations using the 'PTO balances' data entity created to facilitate this process.

Before you create an import project under the Data management and run the import process, download the file\data from external HR or payroll system. The file should have following fields:

Fields	Descriptions
Email ID	Email ID of the resources for which PTO balances to be imported.
Personnel number	Personnel number of the resources for which PTO balances are to be imported.
PTO balances	Balances (number of hours) against each PTO type for resources for whom data is to be imported.
PTO type	Type of PTO i.e. sick leave, vacation, etc. for resources for whom data is to be imported.
Resource name	Name of resource in column for whom data to be imported.

One of these fields, Email ID, Personnel number or Resource name should be specified in the import file. The logic used to retrieve the resource information is as follows: Get the resource information based on Personnel number, If Personnel information doesn't exist then it gets it from Email ID, if email ID also doesn't exist, then it gets the resource information based on the resource name. The PTO balances field takes the values in terms of hours and not days, so it converts your values into hours as necessary before importing.

Sample import data could be as below or download the sample file from [here](#):

EMAILID	PERSONNELNUMBER	PTOBALANCES	PTOTYPE	RESOURCENAME
aprils@contoso.com	000045	8	Comp. Off	April Stewart
aprils@contoso.com	000045	24	WFH	April Stewart

Process to Import PTO balances

The process to import the PTO balances is as follows.

1. Navigate to Workspaces > Data management > Import.

2. Enter group name and description in the import tab\section.
3. Click Add file on the selected entities tab\section.
4. Enter 'PTO Balances' entity name.
5. Click upload and add to select and upload the source data file. Source data will be the external HR or payroll file.
6. Once the information is loaded, close out the form.

Import balances through staging table

✿ This section details how to import PTO balances through staging table into the Microsoft Dynamics 365 for Finance & Operations.

Import PTO balances through staging table

We have introduced a standalone form for PTO balances that enables users to import records for PTO balances across multiple entities simultaneously. Following the import, a staging form is available to review the imported data and make any required corrections. The PTO balances can be brought into Microsoft Dynamics 365 for Finance and Operations using a new utility via a staging table.

Go to *Project management and accounting > projects360 periodic > Import PTO balances*

The screenshot displays the Microsoft Dynamics 365 navigation pane for the 'Finance and Operations' module. The left sidebar lists various functional areas, with 'Project management and accounting' highlighted. The main pane shows a hierarchical view of the 'Project management and accounting' area, with 'projects360' and 'periodic' expanded. The 'Import PTO balances' option is highlighted with a green box under the 'projects360 periodic' section.

- Finance and Operations
 - Payroll
 - Personal time off
 - Procurement and sourcing
 - Product information management
 - Production control
 - Project billing
 - Project management and accounting**

 - Update worker financial dimension from Positions
 - Import PTO balances**
 - Purge PTO balances
 - Populate missing fee budget forecast lines
 - WBS Periodic
 - Resourcing periodic
 - Export time

Before you import PTO balances through this process, download the file\data from external HR or payroll

system. The file should have following fields.

Fields	Description
Company	Select the company in which the PTO balances to be imported.
Personnel number	Personnel number of the resources for which PTO balances are to be imported.
Resource name	Name of resource in column for whom data to be imported.
Resource Email ID	Email ID of the resources for which PTO balances to be imported.
PTO type	Type of PTO i.e. sick leave, vacation, etc. for resources for whom data is to be imported.
PTO balances	Balances (number of hours) against each PTO type for resources for whom data is to be imported.
Logs	This field will display any logs or errors that users may encounter during the import of PTO balances.

One of these fields, Email ID, Personnel number or Resource name should be specified in the import file. The logic used to retrieve the resource information is as follows: Get the resource information based on Personnel number, If Personnel information doesn't exist then it gets it from Email ID, if email ID also doesn't exist, then it gets the resource information based on the resource name. The PTO balances field takes the values in terms of hours and not days, so it converts your values into hours as necessary before importing.

Further while uploading the file, if company field is missing in the uploaded file then system will take current legal entity based on login user.

Sample import data could be as below or download the sample file from [here](#)

Company	PERSONNELNUMBER	Resource name	Email ID	PTO type	PTO balances
USSI	004217	Rupal Batra	rbatra@hso.com	Comp. Off	8
USMF	004217	Rupal Batra	rbatra@hso.com	Comp. Off	8

Process to Import balances through staging table

The process to import the PTO balances is as follows.

1. Project management and accounting > projects360 periodic > Import PTO balances > Upload PTO balances

3. Once the file is loaded then click ok.

4. User can see the uploaded file will show in the staging table.

5. Click on confirm and import to import the balances in FO.

Note – The fields on the form can be edited at any time before the import process.

Work Locations

The Work location feature has been introduced to include the work location on timesheets where the user can choose this information. The location could be at project site, home or office.

This feature is introduced due to statutory requirements, where in some countries, based on the location of the person the taxes are calculated and paid.

Work location information can be used as a basis for pricing (manual effort) if the contract does have prices which vary from one work location to another, depending on the project contract.

Configure Work Location

 This section details the setups required to be configured in order to use the work locations feature.

Parameter Setup

Parameter allows you define on which kind of transactions you want to activate this functionality against. Based on the checkbox selection, work location field will be enabled on the respective forms, allowing users to enter the work location details.

Go to *Project management and accounting > Setup > projects360 Parameter > Timesheets tab*

The screenshot shows the 'projects360 parameters' setup page for Timesheets. The 'WORK LOCATION' section is highlighted with a green box. It contains the following settings:

- WORK LOCATION**
 - Show work location on timesheet lines: ☒ Yes
 - Show work location on timesheet transactions: ☒ Yes
 - Show Work Location on Journals: ☐ No
 - Show work location on timesheet transactions: ☐ No
 - Work location is required: ☐ No
 - Show work location on pending time: ☐ No
- DEFAULT CATEGORY**
 - Category default: Activity

Below are parameters that have been added for this feature.

Fields	Description
Show work location on timesheet lines	When the user chooses Yes in this check box, the Work locations ID field is displayed on the timesheets next to the project name.
Show work location on timesheet transactions	When the user chooses Yes in this check box, the work location field will be displayed on the timesheet line detail section.

Show Work Location on Journals	When the user chooses Yes in this check box, the work location field will be displayed on the Hour and Beginning balance journals.
Show Work Location on timesheet mobile app	When the user chooses Yes in this check box, the work location field will be displayed on the timesheet open through mobile app.
Work location is required	When the user chooses Yes in this check box, it is required that the user enters the details in this field.
Show Work Location on manage pending time	When the user chooses Yes in this check box, the work location field will be displayed on the manage pending time.

Note – When both parameters (2 and 3) are turned on, then the system defaults the work location from the line defaults to the transaction level and the user can then change if required.

Work Location Setup

New form has been introduced for this feature to allow users to setup the work location ID. The form is known “Work Location” and it is available in below navigation.

Project management and accounting > projects360 setups > Work Location

Go to Timesheets > Setup > Work Location

The screenshot displays the Dynamics 365 user interface for setting up work locations. The top navigation bar includes 'Dynamics 365', 'Finance and Operations', and the breadcrumb path 'Project management and accounting > Projects+ Setup > Work location'. The main area is divided into two sections: a table of existing work locations and a form to add a new one.

Work location ID ↑	Location name	Location
CUSTOME ADD	CUSTOME ADD	Custom address
PROJECT-1	PROJECT-1	Project
PROJECT-2	PROJECT-2	Project
PROJECT-3	PROJECT-3	Project
TEST- HOME	TEST HOME	Home
TEST- OFFICE	TEST- OFFICE	Office
TEST- PROJECT	TEST- PROJECT	Project

The 'Work locations' form on the right includes fields for 'Work location ID', 'Location name', and 'Location'. Below these is an 'Address' section with a text area containing 'Portsmouth, NH 00212 USA'.

The form contains the following fields:

- Work location id – Text field where the user can enter the work location ID. Once the user enters the ID and tabs out of the field, the user cannot edit the field.
- Location name – Editable field, where the user can enter the location name and will be allowed to edit even after saving the record.
- Location – This is a drop-down field with the following values in it:
 - Home
 - Office
 - Project
 - Custom – When the user chooses this option then the user must enter the address in the address button. In case the user does not enter the address then the user will not be allowed to exit the record and an error message “Enter the address for the location – Custom” is displayed, forcing the user to enter the address.

Work location ID ↑	Location name	Location
CUSTOME ADD	CUSTOME ADD	Custom address
PROJECT-1	PROJECT-1	Project
PROJECT-2	PROJECT-2	Project
PROJECT-3	PROJECT-3	Project
TEST- HOME	TEST HOME	Home
TEST- OFFICE	TEST- OFFICE	Office
TEST- PROJECT	TEST- PROJECT	Project

Work locations

Work location ID: CUSTOME ADD

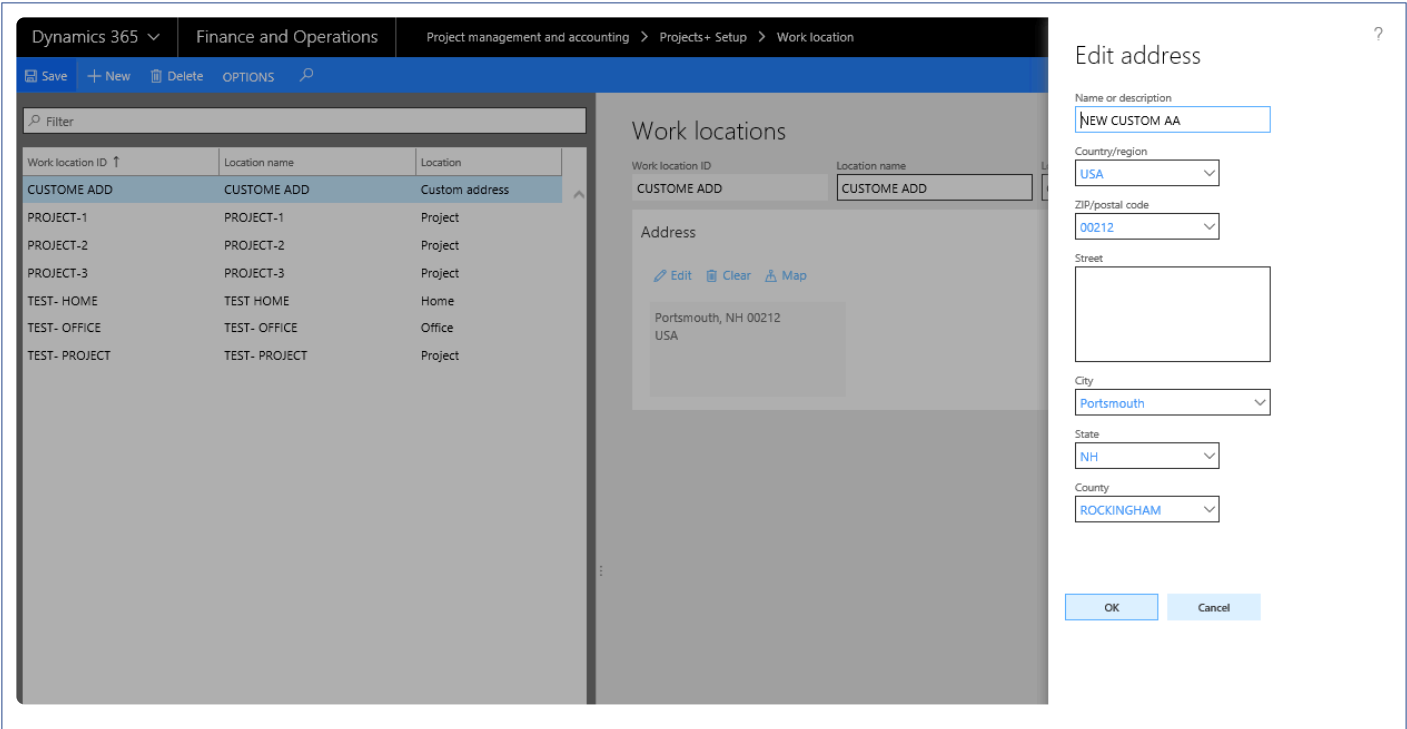

Location name: CUSTOME ADD

Location: Custom address (dropdown menu open showing: Home, Office, Project, Custom address)

Address: Portsmouth, NH 00212 USA

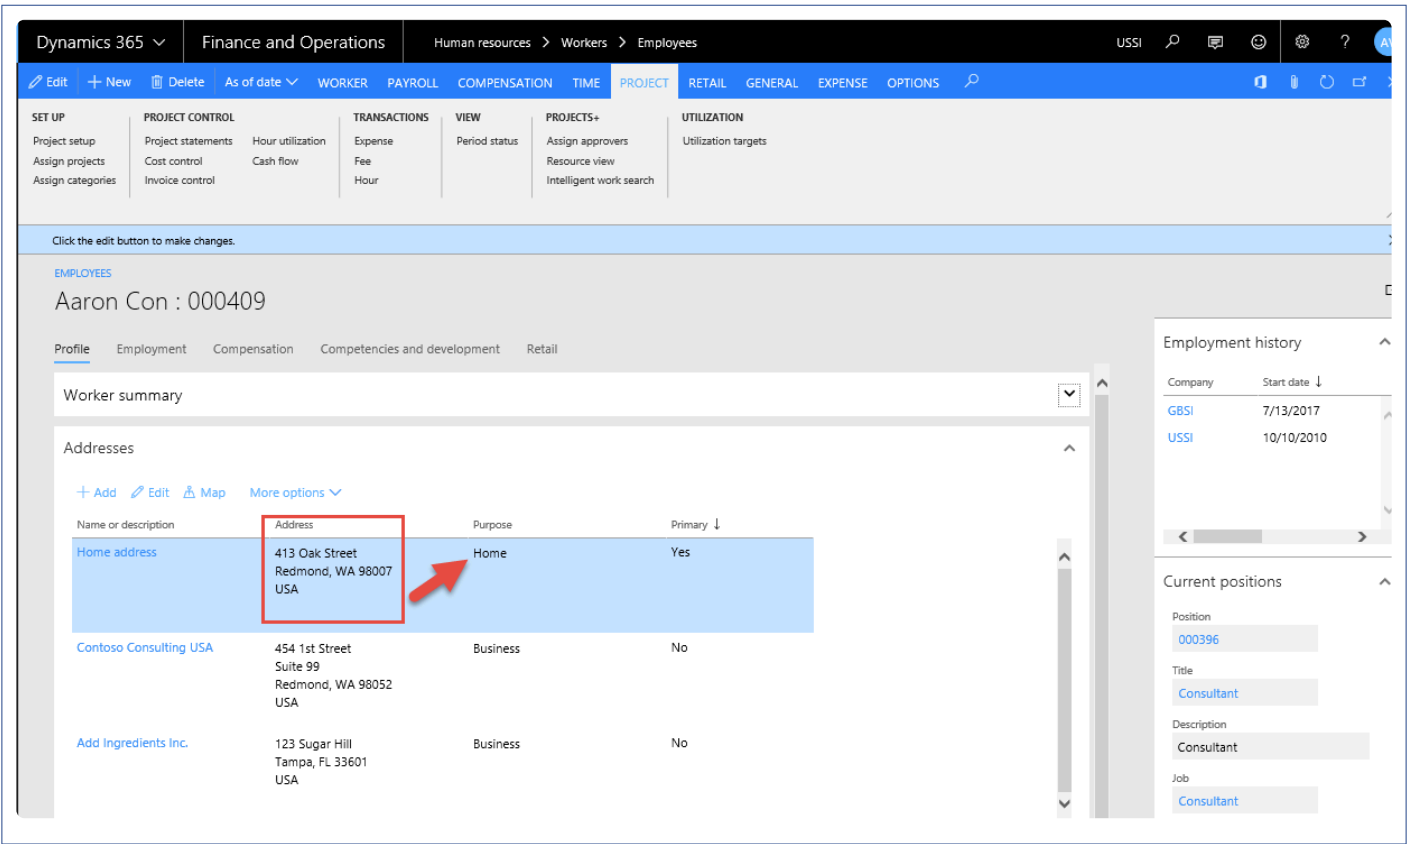

Buttons: Edit, Clear, Map

Address Fast Tab – This tab is enabled when the Location is set to custom. The user can enter an address as in the standard address form in AX7.0.

Based on the location defined the location ID is being picked from standard address tables as displayed in the following screenshots:

Home – Worker’s employee record primary address. When the ‘Private’ checked box is turned on the address only Country, State and City will be displayed on work location address.

Office – Worker's employee record office location (link on employment record). To link the office location, Select the address and click on button 'More options > Assign to office location'. When the 'Private' checked box is turned on the address only Country, State and City will be displayed on work location address.

The screenshot shows the Dynamics 365 interface for a worker's profile. The worker is Aaron Con, ID 000409. The 'Office address' field is highlighted with a red box, showing the address: 454 1st Street, Suite 99, Redmond, WA 98052, USA. Below the worker summary, the 'Addresses' section is visible. A table lists addresses, with the 'Assign to office location' button highlighted in red for the 'Contoso Consulting USA' address. The table has columns for Name or description, Purpose, and Primary.

Name or description	Purpose	Primary
Home address	Home	Yes
Contoso Consulting USA	Business	No

Project – Project address defined on the selected project.

The screenshot shows the Dynamics 365 interface for a project's details. The project is 00000149, with a suffix of -WL. The 'Address' section is expanded, showing the project address: Russell Rd. South, Kent, WA 98031, USA. The address is highlighted with a red box. The 'Address' section includes fields for Description, Address, and a 'Map' button.

Description	Address
Central Discount Store	Russell Rd. South Kent, WA 98031 USA

Custom – Address entered in the new Work Location form, for location type custom.

Setup – Assign Work Locations

This is a new form introduced for the user to select the work locations that can be allowed for the project. Thus, when the user selects this project on the timesheet, only those work locations entered or selected in this form are displayed.

However, if the user leaves this form blank then all the work locations will be displayed in the drop down on the timesheet. Assign work locations form will be available in the Validation group, as shown in the below screenshot on the All Projects list page.

There is also an option to mark the default work location so that there is a default value of work location on the timesheet line or at the transaction level.

The form contains two tabs:

Overview Tab – Where the information of all the selected work locations will be visible to the user. This tab contains the following fields:

- Work location id – field where all the selected work location ID's selected under the work location tab is displayed.
- Work location name – field where all the selected work location name selected under the work location tab is displayed.
- Default – shows the record that is default onto timesheets, for this project.
- Set default button- using which the user can setup a default work location ID, to default onto timesheets.
- Clear default- To clear the default option on the form. The timesheet will show a blank work location ID by default, and the lookup will display all the selected work location records selected in the Work location tab.

The screenshot shows the Dynamics 365 interface for 'Project work location'. The breadcrumb trail is: Dynamics 365 > Finance and Operations > Project management and accounting > Projects > All projects. The user is logged in as USSI. The page has tabs for 'Set default', 'Clear default', and 'OPTIONS'. The main title is '00000149 : 00000149-WL Project work location'. Below the title are tabs for 'Overview' and 'Work location'. The 'Work location' tab is active, showing two lists: 'REMAINING WORK LOCATIONS' and 'SELECTED WORK LOCATIONS'. Between the lists are two arrow buttons: a right arrow (→) and a left arrow (←).

✓ Work location ID ↑	Location name
CUSTOME ADD	CUSTOME ADD
PROJECT-2	PROJECT-2
PROJECT-3	PROJECT-3
TEST- OFFICE	TEST- OFFICE
TEST- PROJECT	TEST- PROJECT

✓ Work location ID	Location name
PROJECT-1	PROJECT-1
TEST- HOME	TEST HOME

Work Location Tab – Shows all the work location available. It has two sections as defined below.

- Remaining work locations – where the list of all work locations that have not yet been selected and moved over to the Selected work locations is available.
- Selected work locations – where the list of work locations that have been selected from the remaining work location is stored.

Two arrow buttons for the selection and de-selection of records and move records between the sections.

Enter Work Locations

✿ *This section defines how work locations are entered on the timesheets and are validated during different processes e.g. on timesheet creation, on submission and during posting. This section also details the validations added while copying timesheet from different places i.e. from timesheets, favorites and assignments etc.*

Timesheets and Work Location field

On Creation

The timesheets form is modified to include the work locations field next to the project name if the parameter “Show work location on timesheet lines” is set to yes. The work location will also be visible on the line details of the timesheet if the parameter “Show work location on timesheet transactions” is set to yes.

After the user chooses the project ID, based on the assignment setup, the work location will default onto the timesheet, the same will default into the line details and the user will be able to edit these values.

The work location lookup will show only the work locations that are selected in the Project work locations form. However, if the user has not defined any work locations on the assignment form, then all the work locations will show up in the lookup.

Line details

Comments | General | Financial dimensions

Day: Mon 08/14 | Work location: PROJECT-1 | Internal comment: | External comment: |

On Submission

If the parameter “Work location is required” is set to yes, there will be a validation of the work location ID selected on the timesheet line/transaction level or else, an error message will be populated “Enter the work location”. Until the user enters the work location, the user will not be able to save the timesheet.

The work location ID will be displayed on the timesheet even during approval.

The timesheet line level approval form includes the work location ID field, so that the approver can see the work location ID.

The screenshot shows the Dynamics 365 Finance and Operations interface for the 'Timesheet' form. The breadcrumb trail is 'Project management and accounting > Timesheets > All timesheets'. The top navigation bar includes 'Save', '+ New', 'Delete', 'Workflow', 'TIMESHEET', and 'OPTIONS'. The left sidebar has 'PERSONALIZE', 'PAGE OPTIONS', 'EDIT', and 'SHARE' sections. A yellow error message bar at the top states: 'Work location must be filled in'. The form header shows '00000823 : Aaron Con'. The 'Timesheet' section displays 'Resource: Aaron Con', 'Timesheet period: 8/14/2017 - 8/20/2017', 'Work week: 8/14/2017 - 8/20/2017', 'Approval status: Draft', and 'Timesheet total: 8.00'. The 'Timesheet lines' section has a table with one line item:

Legal entity	Customer	Name	Project ID ↑	Project name	Work location ID	Activity number	Activity	Category
USI	US_SI_0064	Central Discount Store	00000149	00000149-WL				

On Posting

The system will check whether the work location ID on the timesheet is present and the corresponding addresses/location ID is available, or else an error message is displayed: "Setup up the address for the work location %%% ", where %% is the work location.

Work location ID field will be editable when the timesheet status is approved, so that the project accountant can edit the field if required after the project manager has approved the line.

Once all the location ID's are available the user will be allowed to post the timesheet.

The screenshot shows the Dynamics 365 Finance and Operations interface for the 'Timesheet' form, now in 'Approved' status. The breadcrumb trail is 'Project management and accounting > Timesheets > All timesheets'. The top navigation bar includes 'Save', '+ New', 'Delete', 'Workflow', 'TIMESHEET', and 'OPTIONS'. The left sidebar has 'PERSONALIZE', 'PAGE OPTIONS', 'EDIT', and 'SHARE' sections. The form header shows '00000823 : Aaron Con'. The 'Timesheet' section displays 'Resource: Aaron Con', 'Timesheet period: 8/14/2017 - 8/20/2017', 'Work week: 8/14/2017 - 8/20/2017', 'Approval status: Approved', and 'Timesheet total: 8.00'. The 'Timesheet lines' section has a table with one line item:

Name	Project ID ↑	Project name	Work location ID	Activity number	Activity	Category	Mon 08/14	Tue 08/15	V
Central Discount Store	00000149	00000149-WL	PROJECT-1	W00003751	Test	QA	8.00		

Timesheets – creation other than manual

Timesheet can be created from various ways, and the behavior of the Work location field for each of them is as follows:

- Copy from timesheets – The work locations from the previous timesheets will not be copied, however if there is a default timesheet for the project used in the previous timesheets, then the default will be copied, the rest will have to be entered by the user.
- Copy from favorites – Unless there is a default defined for the project that is being used, the work location ID will be blank.
- Copy from assignments – Unless there is a default defined for the project that is being used, the work location ID will be blank.
- Approved PTO Lines being inserted into Timesheets – Unless there is a default defined for the project that is being used, the work location ID will be blank.

Work location on Journals

The Hour and Beginning balance journals forms are modified to include the work locations field next to the project ID and category respectively if the parameter “Show work location on Journals” is set to yes. Users can enter the work location, If work location is mandatory an error will be thrown as soon as user tries to save the record. All the other validations related to work location are handled during the posting process.

The screenshot displays two screenshots of the projects360 interface. The top screenshot shows the 'Journal lines for beginning balances' form. It includes a table with columns: Project date, Project ID, Transaction type, Category, Work location ID, Activity number, Item, Resource, Role ID, Quantity/Ho..., Cost price, Cost amount, Sales currency, and Sales pri. A single row is visible with values: 3/4/2020, 00000687, Hour, AppDev, Project Address, W00010937, Appasaheb..., Project manager, 120.00, 190.00, 22,800.00, USD, 325.6. The bottom screenshot shows the 'Journal lines for hours' form. It includes a table with columns: Project date, Project ID, Work location ID, Activity number, Category, Resource, Role ID, Description, Hours, Line property, Reversing en..., and Reversing date. A single row is visible with values: 3/4/2020, 00000687, Worker Home Address, W00010938, ERPDev, 000738, Appasaheb..., Project manager, Development hours, 2.00, Billable, and an unchecked checkbox for Reversing en....

Timesheets – Others

Intercompany Timesheets

Using the ReclId? enhancements all timesheet data can be tracked on an intercompany timesheet. Yet, the

posting validation that has been described in the section above will be done for the two postings

- At the time of posting the timesheet, and,
- At the time of posting the Pending vendor invoice. However, this form has not been modified to display the work location ID.

Adjustment

- The adjustment form has been modified to include the work location ID while displaying the timesheet transactions.
- The field is just information to the user, but the user will not be able to change the work location ID using the adjustment form.
- After adjustment, the new transaction also will have the work location ID.

Note – During the adjustment lookup up, if the work location enum? is project, then the lookup is the project location ID again during the posting of the adjustment journal, but while doing so the project/work location is not considered in the validation and will be handled in data entities.

Timesheet Line Approval

Currently in Microsoft Dynamics 365 for Finance and Operations, there is no proper list page for timesheet line level approvals which makes it a time-consuming activity for approval of all lines from different timesheets.

This enhancement shows all the timesheet line level documents pending for approval in one list page to execute the workflow actions. Approvers can see a list of timesheet lines assigned to him\her in one view and take action. This feature is not a parameter driven.

Configure

✿ This section details the workflow required to be configured in order to use the line level timesheet approval feature.

Workflow Setup

Create a line level timesheet workflow that has approvals done for each line and then create timesheet approval workflow. It then invokes the line level workflow from the timesheet workflow.

To create the timesheet line level approval go to:

Go to Project management and accounting > Setup > Project management and accounting Workflow

Go to Timesheets > Setup > Timesheets workflow

Invoke the above created timesheet line level workflow in Review timesheet workflow as shown below:

Note – There is no change to the standard workflow setup.

Parameter Setup

Timesheet tab

On projects360 parameter form, under Timesheet tab, a new parameter “Show for multiple funding sources” is been introduced to display “customer name” from the project when project contract has multiple funding sources.

Details of the fields available on Summary of timesheets tab are as follows –

Fields	Description
Legal entity	Displays the legal entity of the timesheet.
Project ID	Displays Project Id for which time is submitted.
Project name	Displays project name.
Parent project	Displays the parent project name of the Project.
Period starting	Displays timesheet starting period.
Period ending	Displays timesheet ending period.
Total lines	Displays the total lines for approval.

Total hours	Displays the total hours for approval.
Sales manager	Displays the sales manager responsible for the project.
Project manager	Displays the project manager responsible for the project.
Project controller	Displays the project controller responsible for the project.

Details of the fields available on Timesheet lines tab are as follows –

Fields	Description
Resource name	Displays the resource name of the timesheet.
Category	Displays the category for which time is submitted.
Activity	Displays Activity name.
Work location ID	Displays work location ID.
Day with date	Displays days with date for the timesheet period.
Sales price	Displays sales price.
Sales currency	Displays sale currency.
Line property	Displays line property.
Total hours	Displays the total hours for the combination of resource and category.
Booked hours	If the “Timesheet line level approval” parameter is marked under Resourcing tab on projects360 parameters form, then Booked hours will be displayed on the form.

Details of the fields available on Timesheet line details tab are as follows –

Fields	Description
Project date	Displays the project date of the timesheet.
Day	Displays the day of the week.
Hours	Displays Hours submitted for approval. This field can be edited if the parameter is marked.
Activity number	Displays activity number. This field can be edited if the parameter is marked. When the Activity is edited, Category field gets updated based on the “Category default” parameter and prices will also get updated based on the changes made.
Work location	Displays work location. This field can be edited if the parameter is marked.

Category ID	Displays category. This field can be edited if the parameter is marked.
Line property	Displays line property. This field can be edited if the parameter is marked
Internal comments	Displays internal comments from timesheet line. This field is editable which gets updated on the timesheet lines
External comments	Displays external comments from timesheet line. This field is editable which gets updated on the timesheet lines.
Rejection instructions	Approver can update rejection instructions which gets updated on the timesheet lines.

1. All the lines that are assigned for approval for the current user is seen in this list page.
2. The lines shown are from all the legal entities displaying the total number of lines and total number of hours.
3. Lines are grouped based on the project and timesheet period.
4. Period starting and Period ending defines the timesheet period which can be weekly, bi-weekly, monthly.
5. Work week field will be displayed only for the lines where the timesheet period is more than a week.

Late Timesheets

Project managers often find it difficult to determine the timesheets that have not been submitted on time. This is very tedious work, as there is no one common page or form in D365FO where the user gets to see all the timesheets of all employees for all pay periods. This is very essential for a project manager to get the timesheets posted to the invoice and recognize revenue.

To overcome this shortcoming, a feature has been introduced which provides a list page where the project manager can see all the missing timesheets of employees. There are other add-ons provided which are beneficial for:

- Approvers of timesheets, where they can see the list of timesheets of resources for whom they are approvers.*
- Project managers, who can see timesheets of all employees who are assigned to his\her project or projects.*

There are specific areas to view late timesheets and include: All missing timesheets, My employee missing timesheets, My projects missing timesheets and workspaces where users can view the timesheets with different status.

There are users in the organization such as Admin or helping staff who never will enter time, to avoid viewing of such missing timesheets on the late timesheets list, we have introduced a feature to control the records not to be shown as missing timesheet instead showing up the records as No timesheet record for such employees.

View Late Timesheets

✿ This section defines how the Late Timesheets are viewed and all the different types of actions that can be taken against them. Based on the logged in user's role multiple windows are available to view the timesheets.

Email Template

Late timesheets functionality allows you inform resources about their missing or late timesheets through emails. To send email functionality you need to configure the email ID on the projects360 parameters form.

Project management and accounting > Setup> projects360 parameters > Timesheet fast tab.

The list page contains the following fields

Field name	Description
Resource name	Name of the resource to whom the timesheet belongs.
Legal entity	Legal entity of the resource.
Period start date	Timesheet period start date of the resource.

Period end date	Timesheet period end date of the resource.
Period code	Timesheet period code.
Timesheet status	<p>New filters added to filter timesheets with different statuses are as below in Late timesheets list page.</p> <ol style="list-style-type: none"> 1. Timesheets not submitted - No Timesheet or draft status. 2. Timesheets in review - Submitted/ In Review timesheets to be displayed. 3. Not posted - Timesheets approved not posted- Late timesheet not posted due to system hang up or connection lost. 4. Posted - Posted or no timesheet required will be displayed in this filter option. 5. In progress - Timesheets not in status Posted and not in status No timesheet required.
Timesheet number	Timesheet number of the timesheet will be displayed.
Hour	The hours entered in the timesheets will be displayed in this field.
Quick filter Control	New filter added on the All missing timesheet form to filter the timesheet records by resource name and followed by all the field in this form.
Legal entity	Added new filter legal entity to control legal entity lookup to filter the intercompany resource timesheet records.
Filters – Start date	The user can enter a date from when they would like to see the information on the list page. By default, this start date will be blank, thus all records will be seen.
Filters – End date	<p>Current date will be defaulted onto this field, so that the list of timesheets displayed in the list page does not go beyond the current date. However, the user can enter any end date he requires.</p> <p>In effect, the records displayed in the list page will be that from the start to end date specified in the filters above.</p>

The list page contains the following buttons.

Field name	Description
Send email	The user can select multiple records and choose to send emails to the users as reminders to fill in their timesheet. Note that users can select records where the timesheet status is “No timesheet.”. On record selection and clicking on send email button, a new form opens, in which additional message can be typed by the user, which shall be displayed at the bottom of the email. While sending the email, a Email ID template specified on the standard timesheet parameter is used.
No timesheet required	The user can select multiple records with the status No timesheet and click this button, the status will change to No timesheet required.”
Timesheet required.	The user can select multiple records with the status No timesheet required and click this button, the status will change to No timesheet.

Workflow history	The user can choose a timesheet which is in the status other than Created, No timesheet or No timesheet required, to view the workflow history of the selected record.
View Timesheet	The user is able to view the timesheet on clicking this button.

Wildcards available for Template

For sending the late timesheets email reminders, a template can be configured. Below are wildcards\string fields that can be used in the email template. These wildcards will be replaced by the actual values during the run-time for each document emailed.

Wildcards	Actual value
%Resourcename%	Replaced by the name of the resource to whom the timesheet email is being sent.
%telephone%	Telephone number of the resource on the timesheet.
%hours%	Replaces the Total timesheet hours on the email.
%periodcode%	Period code associated with the resource on the timesheet.
%timesheetnumber%	Timesheet number of the selected timesheet.
%status%	Timesheet status of the selected timesheet at the time of sending email.
%periodFrom%	Timesheet period start date of the selected timesheet.
%periodTo%	Timesheet period end date of the selected timesheets.
%manager%	Manager associated with the resource on the timesheet.
%Approvername%	Replaced by the name of the approver to whom the timesheet email is being sent.
%body%	Replaced with content that is specified on the Message field on the late timesheet dialog.

My Employee Missing Timesheets

This list page displays the list of All missing timesheets and displays the records of employee's timesheets for whom the logged in user is the timesheet approver. Below form screenshot shows where the timesheet approver is set on the Worker form.

My Projects Missing Timesheets

This list page displays all the missing timesheets but displays the records of employee timesheets for the project for which the logged in user is the Project manager. So, the logged in user should be set up as the Project manager in the project in which the employee has been added as a worker, in the Project validation worker assignment form. There is a dependency of this feature on the Project worker validation setup. Unless this setup exists on the projects, there would be no data in this list page. The rest of the functionality and capability of this list page is the same as that of All missing timesheets.

This list page is available in the below path.

Project management and accounting > projects360 > Timesheets > My projects missing timesheets.
Go to Timesheets > Missing timesheets > My project missing timesheets.

Resource name	Legal entity	Period start date	Period end date	Period code	Timesheet status	Timesheet number	Hours
Aaron Con	ussl	1/6/2014	1/12/2014	EmpWeek	No timesheet		0.00
Alice Ciccu	ussl	1/13/2014	1/19/2014	EmpWeek	No timesheet		0.00
Allie Bellew	ussl	1/13/2014	1/19/2014	EmpWeek	No timesheet		0.00
Aaron Con	ussl	1/20/2014	1/26/2014	EmpWeek	No timesheet		0.00
Adam Carter	ussl	1/20/2014	1/26/2014	EmpWeek	No timesheet		0.00
Alice Ciccu	ussl	1/20/2014	1/26/2014	EmpWeek	No timesheet		0.00
Allie Bellew	ussl	1/20/2014	1/26/2014	EmpWeek	No timesheet		0.00
Aaron Con	ussl	1/27/2014	2/2/2014	EmpWeek	No timesheet		0.00
Adam Carter	ussl	1/27/2014	2/2/2014	EmpWeek	No timesheet		0.00
Alice Ciccu	ussl	1/27/2014	2/2/2014	EmpWeek	No timesheet		0.00
Allie Bellew	ussl	1/27/2014	2/2/2014	EmpWeek	No timesheet		0.00
Aaron Con	ussl	2/3/2014	2/9/2014	EmpWeek	No timesheet		0.00
Adam Carter	ussl	2/3/2014	2/9/2014	EmpWeek	No timesheet		0.00
Alice Ciccu	ussl	2/3/2014	2/9/2014	EmpWeek	No timesheet		0.00
Allie Bellew	ussl	2/3/2014	2/9/2014	EmpWeek	No timesheet		0.00
Aaron Con	ussl	2/10/2014	2/16/2014	EmpWeek	No timesheet		0.00
Adam Carter	ussl	2/10/2014	2/16/2014	EmpWeek	No timesheet		0.00

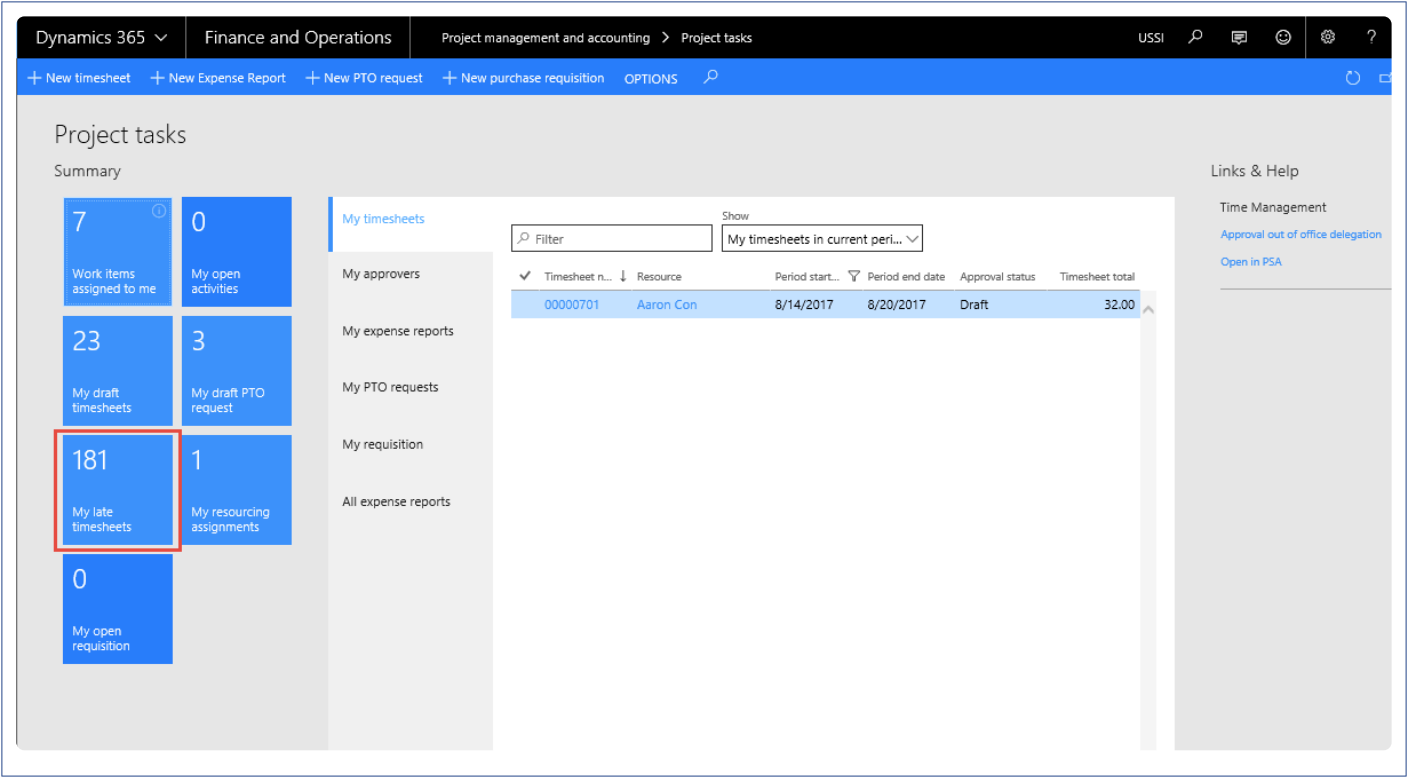

Note – There is a dependency of this feature on the Project manager setup. Unless this setup exists on the projects, there would be no data in this list page.

Workspaces

Following Workspaces have been modified to include the timesheet details. Based on the logged in user's security role data will be populated on these workspaces.

Project Task Workspace

All missing timesheets forms have been linked to the project tasks workspace to get access on my timesheet missing in all the legal entity. My Late timesheets tiles shows logged in user's Missing timesheets records for all the periods in the system.

To view more details on the missing timesheets, user can click on the My Late Timesheets tiles and below form opens.

Note – Filters 'End Date' and 'Missing Timesheet' status filter are disabled, and resource manager can view the resource missing timesheet with status "Timesheets not submitted" on this form.

No timesheet required

✿ This section defines how No timesheet required is setup and the display of records on late timesheets.

Employee setup

On the employees form, we can define which employee do not require to submit the timesheets on the project setup.

Go to *Human resources >Workers >Employees > Project tab > project setup action pane button.*
Go to *Resourcing >Resource setup >Employees > Project tab > project setup action pane button.*

The screenshot shows the 'Resource setup' form for 'EMP NO TIME : USSI'. The form is divided into four main sections:

- TIMESHEET**:
 - Period code: EmpWeek
 - No timesheet required: Yes (highlighted with a green box)
 - Default category: Apprentice
- MAX HOURS CALENDAR**:
 - Max hours calendar: USCalendar
 - Require start/stop time: Yes
 - Use effective labor rate: Yes
- RESOURCE SCHEDULING**:
 - Calendar: Standard
 - Enable project validation: Yes
 - Enable category validation: Yes
- MAXIMUM WORKING TIME**:
 - Monday: 0.00
 - Tuesday: 0.00
 - Wednesday: 0.00
 - Thursday: 0.00
 - Friday: 0.00
 - Saturday: 0.00
 - Sunday: 0.00
 - Total working hours: 0.00

All Missing Timesheets

This list page displays all timesheets for employees who are not required to submit timesheet with status 'No timesheet required'.

Go to *Project management and accounting > projects360 > Timesheets > All missing timesheets.*
Go to *Timesheets > Missing timesheets > All missing timesheets.*

Email missing timesheet

This section defines how to send missing timesheet email to all the resources through batch.

Email missing timesheet periodic process

Email missing timesheet periodic process helps in sending email for late/missing timesheet to the selected resource/approver or all resources/approver through batch process. This process minimizes manual intervention and can be scheduled on periodic basis.

Go to Project management and accounting > projects360 periodic > Timesheets > Email missing timesheets.

Field	Description
Message	User can type additional message and it will be display at the bottom of the email. To display the message on the email user needs to define wildcard in email template.
Email notifications	User can select either Resource or Approver to send email notification.
	Resource: Email notification will be sent to the resources where there is open timesheets or missing timesheets.
	Approver: Email notification will be sent to approver to review the timesheet.
From Date	User can define From date to include the records for send email.
To Date	User can define To date to include the records for send email.
Resource	User can filter and select the resources to send email notification.
OK button	Click OK button to send email notification.
Cancel button	Click cancel button to cancel the email sending process.

Time Export

A feature called, “Time export”, has been introduced to provide timesheet hours from Dynamics 365 for Finance and Operations to Payroll systems for payroll processing. As this export is for payroll, pay codes are a key element and part of this feature. A new form has been introduced to define pay codes for project/category/line property. These pay codes are associated with the transactions based on the setup and are also grouped based on pay codes for payroll processing.

There is a provision to consider timesheets that are approved and not yet posted. A parameter was added under projects360 to achieve this functionality.

In case there are any adjustments to timesheets in the current period, the same functionality will be available in the subsequent time export, as an adjustment, thereby ensuring that the timesheet corrections and adjustments are captured in the time export.

The time export lines can be viewed in the inquiry forms provided in this feature and can be exported using the Data management services. Only the lines for the batch with status ‘Created’ can be exported through the data management, for the lines missing the pay codes use the ‘Export to excel’ function from within the time export lines form.

Configure Time Export

✿ *A few setups needs to be performed for exporting time from Microsoft Dynamics 365 Finance and Operations. This section details the configuration process.*

Parameter Setup

Although this feature is not entirely dependent upon any parameters, you can export un-posted time as well then there is parameter to control that behavior.

A parameter that varies the output of Time Export is the “Include unposted timesheet hours”. When this parameter is turned on, the time export will include the timesheets with the below statuses:

- Approved timesheets.
- Posted timesheets – in case of Inter-company timesheets, where the Inter-company postings (customer invoice and Vendor Invoice) is not completed.

Go to Projects management and accounting > Setups > projects360 parameters > Timesheet tab.

Go to Timesheets > Setups > Timesheets parameters > Time export tab.

The screenshot displays the 'Projects+ parameters' configuration page in Dynamics 365 Finance and Operations. The breadcrumb trail indicates the path: Dynamics 365 > Finance and Operations > Project management and accounting > Setup > Projects+ parameters. The 'Timesheets' tab is selected in the left-hand navigation pane. The main content area is titled 'Set up parameters for timesheets' and contains several sections:

- PERSONAL TIME OFF:** Includes options for 'Activate personal time off' (set to No), 'Automatically populate in times...' (set to No), and 'Display balances' (set to No).
- DEFAULT CATEGORY:** A dropdown menu set to 'None'.
- WORK LOCATION:** Includes options for 'Show work location on timeshe...' (set to No) and 'Work location is required' (set to No).
- TIME EXPORT (highlighted with a green box):** Includes options for 'Require timesheet audit trail' (set to Yes) and 'Include unposted hours' (set to Yes).

Pay Code Setup

A new form to configure pay codes is introduced. This form may be used by any payroll system, which is external to Dynamics 365 for Finance and Operations. Pay codes are used for the grouping of hours while exporting the hours into the time export form. The users can validate if there are missing pay codes for the

transactions available for export in the selected period.

A data entity is created for this form to create and publish the records from outside of Microsoft Dynamics 365 Finance and Operations. Pay code form is available in the below path:

Go to *Project management and accounting > projects360 setup > Time export > Pay code*
Go to *Timesheets > Setup > Pay code*

Dynamics 365 ▾ Finance and Operations Project management and accounting > Projects+ Setup > Export time > Pay code USSI 🔍

The fields available on this form are as follows:

Fields	Description
Borrowing legal entity	Allows to select the borrowing legal entity. The default value in this field is the logged in legal entity.
Project code	The options available are – Table, Group and All. When set to group or table, the project relation must be selected. This field works in conjunction with the Project Relation field.
Project relation	This field is non-editable, when the option in Project code is set to All. The Project groups are displayed for selection when the Project code field is set to Group. The Projects are displayed for selection when the Project code field is set to Table.
Category code	The options available here are – Table, Group and All. When set to group or table, the project category must be selected. This field works in conjunction with the Project category field.
Project category	This field is non-editable, when the option in Category code is set to All. The Category groups are displayed for selection when the Category code field is set to

	Group. The Project categories are displayed for selection when the Category code field is set to Table.
Line property	This field displays all the line properties configured in the borrowing legal entity selected for the line.
Pay code	This field is user entry field. For different combinations of legal entities, projects, categories and line property different pay codes can be entered.

The buttons available on this form are as follows:

Buttons	Description
Save	Saves the changes user has made on the form.
New	Allows to create a new combination of legal entities, projects, categories and line property for a pay code.
Delete	Provides option to remove the selected records on the form.
Validate	Allows to validate the pay code setup. There is a check on all the transactions for the specified period in the form to verify if all the transactions have the pay code defined in the setup. In the case where it is missing, the same is shown in the message details, as shown in the below screenshot.

Security Setup

This feature will work for the users with **Human resource assistant** role. The user who needs to perform the

required actions on the different forms associated with feature should be associated to this role.

Export Time for Payroll

This section details the process to export time for payroll and different options\filters available at the time of export.

Time Export

Once the pay codes are configured and information is validated, users can export the hours captured in the system using time export process. Users can filter the time export records based on Project, Category and Line property.

The users can export the timesheets for a specific period. Once the process is run, a message is displayed in the action center with details. Time export process form can be accessed from:

Project management and accounting > projects360 periodic > Time export > Time export process
Go to Timesheets > Timesheet integration > Export time

The fields available on this form are as follows:

Fields	Description
From date	Enter the date from where hour records need to export.
To date	Enter the date till where hour records need to export
Payroll date	Enter the payroll date for the above mentioned from and to dates.
Worker type	The options available are – All, Employee and Contractor. Select the option for which data need to be exported.
Pay cycle	Choose the pay cycle for which the time export is desired. The pay cycles available here is defined in the Human resource module.
Exclude	When this parameter is set to 'Yes', adjusted transactions are excluded while exporting the

adjustment transactions	time.
-------------------------	-------

Inquire Exported Time

There are two forms from where the time export can be verified. One is at the summary level which has the details of the batch created, etc. From this form, the user can launch the lines form to view the details of the lines exported for payroll.

Export Time for Payroll

After running the export process, the batches are created and can be verified on the export time for payroll form. This form can be accessed from:

Go to *Project management and accounting > projects360 Inquiries and reports > Time export > Export time for payroll*

Go to *Timesheets > Timesheet integration > Export time for payroll*

Batch ID	Start date	End date	Payroll date	Status	Employment type	Pay cycle	Created date and time
PJJ_000408	8/1/2018	8/31/2018	9/1/2018	Created	All		10/4/2018 12:15:59 PM

The fields available on this form under the Overview tab are as follows:

Fields	Description
Batch ID	This is automatic generated batch number.
Start date	Displays the start date specified while running time export process.
End date	Displays the end date specified while running time export process.
Payroll date	Displays the payroll date specified while running time export process.
Status	Three status are there for a batch – Created, Cancelled and Processed. When export process is run batch will be created status. If user cancels the batch, status will be changed accordingly. On update status, batch will moved to processed status.
Employee type	Displays the employee type selected while running time export process.

Pay cycle	Displays the pay cycle chosen during the time export processing.
Created date and time	Displays the date and time when the batch is created.

The fields available on this form under the History tab are as follows:

Fields	Description
Batch ID	Shows the batch ID of the selected batch.
Status	Shows the status of the selected batch.
Created by	User id of the user who created the Batch job.
Created date and time	Date and time in which the Batch job was created.
Modified By	User id of the user who modified the batch job.
Modified date and time	Date and time in which the batch job was modified.

The buttons available on this form are as follows:

Buttons	Description
Time export Process	This button will execute the time export process.
View pay codes	This button will open up the Pay codes form for the user to view the pay codes.
Update pay codes	This button will open the Pay codes form for the user to update Pay codes.
Lines	This button will open another form showing all the hour records in exported into the selected batch.
Cancel	Use this button to cancel the batch. Cancel will set the batch to cancel and remove all the lines inside that batch.
Process	Use this button to mark the batch as processed. The batch status is updated from created to processed. Once the batch is in Processed status, the same cannot be exported into an excel.

Time export Lines

Select a batch and click on the lines button on the ribbon to open the time export lines form. This form contains the exported hour records. A data entity is also provided to export the records for the batch with

status 'Created' and in case of exporting records with missing pay codes, use the 'Export to excel' function from within the time export lines form. Time export lines can be accessed from following path:

Project management and accounting > projects360 Inquiries and reports > Time export > Time export log > Lines button

Go to Timesheets > Timesheet integration > Export time for payroll > > Lines button

The fields available on this form are as follows:

Fields	Description
Batch ID	This is automatic generated batch number.
Transaction ID	Displays the transaction ID of the transaction.
Voucher date	Displays the Voucher date of the transaction.
Project legal entity	Displays the project legal entity.
Project ID	Displays the project ID.
Category ID	Displays the category ID.
Pay code	Displays the pay code, based on the combination of the transaction and definition of the same in the setup.
Resource ID	Displays the resource ID.
Resource name	Displays the resource name.
Position	Displays the resource position.
Hours	Displays the timesheet hours.
Line property	Displays the line property on the transaction.

Adjustment	Displays a checkbox, which when marked indicates that the transaction line is an adjustment transaction.
Transaction origin	Displays the Transaction origin such as Timesheet, hour, etc.
Work location id	Displays the work location ID.
Approval status	Displays the Approval status of the timesheet line

Overtime entry

A feature called, “Overtime entry”, has been introduced to enter overtime on timesheets. Overtime lines can be viewed in the Time export lines inquiry form and can be exported using the Data management services.

We have introduced new settings such as overtime types, overtime groups and overtime rules. This will provide a flexible and configurable set of rules to help users creating overtime entries in timesheets.

Configure

 *A few setups needs to be performed for entering overtime on timesheets. This section details the configuration process.*

Parameter Setup

On projects360 parameter form, under Timesheets tab, a new set of parameters under the “Overtime” has been introduced to control the Overtime entry on timesheets. User needs to set the field value to ‘Yes’ in order to use the this functionality.

Go to Project management and accounting > Setups > projects360 parameters > Timesheets tab

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate overtime entry	When this parameter is set to Yes, user can enter overtime on the timesheets.
Overtime category	This field is used to default category on the over timesheet line.
Overtime line property	This field is used to default the line property on the over timesheet line.

Overtime pay code	Update overtime pay code. Once pay code is updated a new 'Pay code' will be created/ updated automatically in pay codes form.
Activate overtime validation group	When this parameter is set to Yes, overtime type will be defaulted based on overtime validation group on the over timesheet line.
Overtime type is required	When this parameter is set to Yes, overtime type on the timesheet will be mandatory.
Show timesheet week summary	When this parameter is set to Yes, timesheet week summary section will be on the 'Timesheets' and 'Daily time entry' form.

Overtime types

With this new form, user will be able to define overtime types which can be used while entering over timesheet lines.

Go to Project management and accounting > projects360 Setup > Overtime > Overtime types

The screenshot shows the 'Overtime types' form in the 'projects360 Setup' menu. The form has a 'Standard view' and a 'Filter' input. Below the filter, there is a table with the following data:

Overtime type	Description	Default
<input checked="" type="radio"/> OT1	Overtime type 1	✓
<input type="radio"/> OT2	Overtime type 2	
<input type="radio"/> OT3	Overtime type 3	
<input type="radio"/> OT4	Overtime type 4	

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Overtime type	This field is used to define Overtime type.
Description	This field is used to define description for the overtime type.
Default	This field is used to default the overtime type on the over timesheet line. User can select only one overtime type as default when activation overtime validation group parameter is unmarked.
Overtime rules	User can define a rule to default Overtime line property and Overtime category on over timesheet lines based on Overtime type, Overtime validation group and project.

Overtime validation groups

With this new form, user will be able to create validation groups with the combination of resource and overtime types which will validate the default of line property and category on over timesheet lines. Overtime type will be defaulted on the timesheet when the Overtime line is created based on the overtime validation group. Incase if there is np default overtime type/resource then the Overtime type will be defaulted from Overtime type main form.

Go to *Project management and accounting > projects360 Setup > Overtime > Overtime validation group*

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Overtime validation group	This field is used to define overtime validation group.
Description	This field is used to define description for the overtime validation group.
Resource	This section is used select the resource valid for this group.
Overtime type	This section is used select the overtime type valid for this group. Overtime type can be selected for each overtime validation group.

Overtime rules

With this new form, User can define a rule to default Overtime line property and Overtime category on over timesheet lines based on Overtime type, Overtime validation group, project, Line property and category.

Go to Project management and accounting > projects360 Setup > Overtime > Overtime rules

The screenshot shows the 'Overtime rules' form in the 'projects360 Setup' section. The form is titled 'Standard view' and has a 'Filter' input field. Below the filter is a table with the following columns: Overtime type, Overtime validation group, Valid for, Project relation, Overtime line property, Overtime category, and Overtime pay code. The first row is selected, showing OT1, OTG1, Table, 00001132, Overtime, and Overtime. The second row is also visible, showing OT2, OTG1, All, and Overtime.

Overtime type	Overtime validation group	Valid for	Project relation	Overtime line property	Overtime category	Overtime pay code
OT1	OTG1	Table	00001132	Overtime	Overtime	
OT2	OTG1	All		Overtime		

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Overtime type	Select a Overtime type.
Overtime validation group	Select a Overtime validation group.
Valid for	This field is used to define if the rule is valid for specific project, group of projects or all projects.
Project relation	Value can be defined based on the value selected on Valid for field.
Overtime line property	This field is used to default line property on the over timesheet line.
Overtime category	This field is used to default category on the over timesheet line.
Overtime pay code	Update overtime pay code. Once pay code is updated a new 'Pay code' will be created/ updated automatically in pay codes form.

Overtime Category

On the project categories, new parameter is added to identify the overtime categories. this parameter is available only when 'Activate overtime entry' on projects360 parameter is set to 'Yes' and editable when transaction type is 'Hour' and 'Activate in journals' is set as 'Yes'

Go to *Project management and accounting > Setup > Categories > Project categories*

When the above parameter is marked on the project category and the category is selected on the normal timesheet line, then the validation will trigger while submitting the timesheet.

Overtime on Timesheets

✿ This section describes how the enter overtime on the timesheets and view the records on Export time lines inquiry form.

All Timesheets

New option is provided on the timesheets to create overtime line through which user can enter the overtime lines. When the overtime lines get created with Overtime type, Category and Line property gets defaulted from the Overtime rules or from parameter setup can user can post the timesheet.

Go to *Project management and accounting > Timesheets > All timesheets*.

The screenshot displays the 'All timesheets' interface. At the top, there's a navigation bar with 'Finance and Operations' and 'Project management and accounting > Timesheets > All timesheets'. Below this, a toolbar contains 'Save', 'New', 'Delete', 'Workflow', 'Timesheet', and 'Options'. A sidebar on the left has 'Maintain' (My delegates, My favorites, Recall timesheet), 'Related information' (Hour transactions), 'Manage' (Timesheet versions), 'Print' (Print timesheet), and 'Policy' (Check for violations). The main area shows 'All timesheets | My view (1)' and a header for '00005122 : Usha Ravindra Rao'. Below the header, a 'Timesheet' section shows 'Resource: Usha Ravindra Rao', 'Timesheet period: 2/1/2021 - 2/7/2021', 'Work week: 2/1/2021 - 2/7/2021', 'Approval status: Draft', and 'Timesheet total: 0.00'. A 'Timesheet lines' section has buttons for '+ New line', '+ New overtime line', and 'Remove'. A 'Copy from' dropdown is open, showing 'Copy from current line' with a 'Yes' toggle. Below this, a 'New overtime line' dialog box is open, showing 'Overtime type' as 'OT1' and an 'OK' button. The background table shows columns for Project ID, Project name, Work location ID, Activity, Category, and dates.

When user selects option “Copy from current line”, details like Project ID, Project name, Work location ID will get copied from the current line with the Category and Line property from the parameter setup.

When user selects Overtime type, Category and Line property will get defaulted from Overtime rules form.

Annual Holiday

A feature called, “Annual holiday”, has been introduced which allows users to define all the holiday dates for a specific calendar and legal entity. In addition, holidays can be configured to be auto populated when timesheets are created by users facilitating proper time entry.

This feature is parameter controlled. New settings are introduced to define the annual holiday and provided an option to the user if these holidays to be automatically populated onto the timesheets.

Set and Use Annual holiday

✿ This section details the setups required to be configured in order to use the Annual holiday feature.

Parameter Setup

On projects360 parameter form, under Timesheets tab, a new set of parameters under the “Annual holidays” has been introduced to control the annual holidays feature. User needs to set the field value to ‘Yes’ in order to use the this functionality.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets tab*

The screenshot shows the 'projects360 parameters' form in the 'Timesheets' tab. The 'ANNUAL HOLIDAYS' section is highlighted with a green box. It contains two parameters: 'Activate annual holidays' (set to Yes) and 'Allow timesheet line manual u...' (set to Yes). Other sections include PERSONAL TIME OFF, OVERTIME, WORK LOCATION, TIME EXPORT, and MANAGE PENDING TIME.

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate annual holidays	When this parameter is set to Yes, user can enter annual holidays.
Allow timesheet line manual update	When this parameter is set as “Yes”, then auto-populated timesheet lines can be manually updated within Timesheet form.

Annual holidays

New form “Annual Holidays” is introduced to create annual holidays. User can define all the holiday dates for specific calendar and legal entity in this form. This new will be available only if “Activate annual holidays” parameter is set as “Yes”.

Close working times button is provided where user can close the working time for the defined holiday. This will update the working times status and display on the Annual holiday form.

Go to Project management and accounting > Setups > projects360 setup > Calendar > Annual holiday

Finance and Operations Project management and accounting > projects360 Setup > Calendar > Annual holidays

Details of the fields available on the Annual holiday form are as follows –

Fields	Description
Calendar	Select calendar to define annual holiday.
Holiday date	Define holiday date.
Holiday description	Define description for a holiday date.
Hours	Define hours.
Auto populate in timesheet	When this parameter to Yes, holiday record will get automatically created on the timesheet for the defined period.
Project ID	Define project ID. This field is mandatory when Auto populate in timesheet field is set to yes
Activity number	Define activity number.

Category	Define category.
Use resource category	When this parameter to Yes, category will default from the resource on the annual holiday lines.
Working times control	Displays the working time status of the date.

Annual holiday on Timesheet

When the user set “Auto populate in timesheet” parameter to yes, annual holidays will get automatically populated on the timesheet with the Project ID and the category mentioned on the annual holiday setup form. This annual holiday record will be editable only when the “Allow timesheet line manual update” parameter is set to Yes on the parameters form. User will be able to remove these timesheet lines.

Go to Project management and accounting > All timesheets > All timesheets

The screenshot displays the HSO ProServ interface for managing timesheets. The top navigation bar shows the path: Finance and Operations > Project management and accounting > Timesheets > All timesheets. The left sidebar contains tabs for Maintain, Related information, Manage, Print, and Policy. The main content area is titled "00006397 : Usha Ravindra Rao" and shows the Timesheet setup. The header includes fields for Resource (Usha Ravindra Rao), Timesheet period (1/11/2021 - 1/17/2021), Work week (1/11/2021 - 1/17/2021), Approval status (Draft), and Timesheet total (8.00). Below the header is a table of Timesheet lines with columns for Overtime, Legal entity, Main Project N..., Se..., Project ID, Project name, Work location ID, Activity..., A..., Category, Mo..., Tue 0..., Wed 01/13, Thu 01/14, Fri 01/15, Sat 01/16, and a final column with a right arrow. The first row of the table shows 'uss' as the legal entity, 'AH1' as the project ID, and 'AH1' as the project name, with a total of 8.00 hours.

Time card

projects360 introduces a new feature that provides the ability of easily entering Time-card detailed information directly from the Timesheet form. This functionality can be activated only for specific resources/users. From a simple overview the user can see and enter Time In, Time Out as well as Time on break. Break types can be configured allowing to categorize the time on break for later analysis. Even though this feature can help to partially cover those requirements, we do not officially comply with the State of California regulations. This feature controlled through a parameter.

Configure time card

✿ To start using Time card feature, user needs to perform specific setups. This section details the configuration process.

Parameter setup

On projects360 parameter form, under Timesheets tab, a new parameter “Activate time card entry” has been introduced to enter time card on timesheets. User needs to set the ‘Activate time card entry’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets*

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate time card entry	When this check box is enabled, user can enter time card on timesheets.
Stat time required for breaks	If this parameter is turned on, “Start time” field on the time card will be made mandatory.
Duration required for	If this parameter is turned on, “Duration” field on the time card will be made mandatory.

breaks	
Validate against timesheet hours	Mandatory – Select as Mandatory to show a warning icon and warning message to stop submitting the timesheet if there are any differences between the timecard hours and the sum of hours per day.
	Warning – Select as Display warning to show a warning icon and warning message if there are any differences between the timecard hours and the sum of hours per day.
	None – Select as if not warning required if there are any differences between the timecard hours and the sum of hours per day .
Default time out	Defaults time out on the Time card.
Default time in	Defaults time in on the Time card.

Resource setup

On employees form, under Project setup, a new parameter “Time card required” has been introduced to enter time card on timesheets. User needs to set the ‘Time card required’ field value to ‘Yes’ on resources to activate time card for the resource..

Go to Human resources > Employees > Employees > Project setup

Time card hour validation	When this check box is enabled time card hours validation gets activated on the timesheet and display warning icon based on the parameter setup.
---------------------------	--

Break types

Break types can be configured that can be used while entering the time card from the timesheets. User needs to set the ‘Activate time card entry’ field value to ‘Yes’ in order to use this form.

Go to *Project management and accounting > projects360 setups > Time card > Time break types*

Details of the fields available on the Time break types form are as follows –

Fields	Description
Break type	Define break type to be used on time card.
Description	Define a description for a break type.

Enter Time card

 This section shows how to enter time card with break types on timesheets.

A new section ‘Time card’ is added on the timesheet which allows users to quickly enter time in, time out on daily basis. This new section provides the details on how many breaks taken in a day with the duration spent for each break and based on the duration defined on the breaks automatically the remaining hours gets updated.

Details of the fields available on the Time card section on timesheet are as follows –

Fields	Description
Date	This field will auto populate the dates based on the work week selected on the timesheet.
Day of the week	This field will auto populated based on the date.
Time in	This field will default from the parameter or user has an option to update or edit.
Time out	This field will default from the parameter or user has an option to update or edit.
Time on breaks	This field will display the total time of breaks taken which is auto calculated based on the duration defined on the Break details tab.

Number of breaks	This field will display the number of breaks taken in a day based on the break types.
Total time	This field will display the total time based on the time in- time out and excluding break time.
Non-working days	This field will be by default marked for the non-working days. User can unmark this check box if required.
Hours Difference	This field will display warning icon if there are differences between timecard hours vs timesheet hours per day.

Details of the buttons available on the Time card section on timesheet are as follows –

Fields	Description
Reset time card	When this button is clicked all the time card records will delete and recreate the time card records again.

Details of the fields available on the Break details tab are as follows –

Fields	Description
Date	Select a date to update the break details.
Day of the week	his field will auto populated based on the date.
Break type	Select tune break type.
Start time	Define start time for the break. This field will be mandatory when “Start time is required” parameter is marked.
Duration	Define the duration of the break. This field will be mandatory when “Duration is required” parameter is marked .
Comment	Update comments if any.

When there is hour difference and parameter value is set as “Display warning” or “Mandatory” in addition to “Time card hours validation” is set as “Yes” for the specific resource, then a warning icon will be displayed if there are any differences between the timecard hours and the sum of hours per day.

If new parameter value is set as “Mandatory” in addition to “Time card hours validation” is set as “Yes” for the specific resource, then the validation about differences between timecard hours vs timesheet hours per day will be triggered during workflow submission.

Total time	Displays total time for the day.
Non-working day	Displays whether it is working or non working day.

Unit code entry

projects360 introduces a new feature that allows users to enter Unit codes for billing purposes directly from the timesheet. Unit codes entry can be activated by resource/user. Billing codes can be created and configured to either use expense, fee or item categories. Based on the unit codes entered by the user from the timesheet, the timesheet process will automatically create necessary expense journal and/or a fee journal generating project transactions for billing purposes.

Configure unit code entry

✿ To start using Unit code entry feature, user needs to perform specific setups. This section details the configuration process.

Parameter setup

On projects360 parameter form, under Timesheets tab, a new parameter “Activate unit codes entry” has been introduced to enter unit code card on timesheets. User needs to set the ‘Activate unit codes entry’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets*

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate unit code entry	When this check box is enabled, user can enter unit code on timesheets.
Unit fee journal name	Select fee journal name which will be used while creating the journal when unit code is entered on timesheets.
Unit expense journal name	Select expense journal name which will be used while creating the journal when unit code is entered on timesheets.

Resource setup

On employees form, under Project setup, a new parameter “Allow unit codes entry” has been introduced which enables to enter unit code on timesheets. User needs to set the ‘Allow unit codes entry’ field value to ‘Yes’ on resources to activate unit code entry for the resource..

Unit code	Define Unit code to be used on timesheets.
Description	Define a description for a Unit code.
Transaction type	Select a transaction type for a unit code.
Category	Select a category for the unit code. This field is mandatory when the transaction type is expense or fee.
Offset account	Select a offset account to be used for expense.

Note – When the user select transaction type Item, no transactions will be posted in the current version 10.0.22.

Unit code entry on timesheets

 This section shows how to enter unit codes on timesheets.

A new section ‘Unit codes entry’ is added on the timesheet which allows users to quickly enter unit codes. Based on the unit codes entered on the timesheet, automatically expense journal and/or a fee journal will get posted when user posts the timesheet. When the timesheet is created for intercompany, then the unit code journals will get posted in the legal entity for which the timesheet get posted.

Total	This field will display the total quantity for a unit code.

Note – Unit code can be created and posted even without time entered on the timesheets.

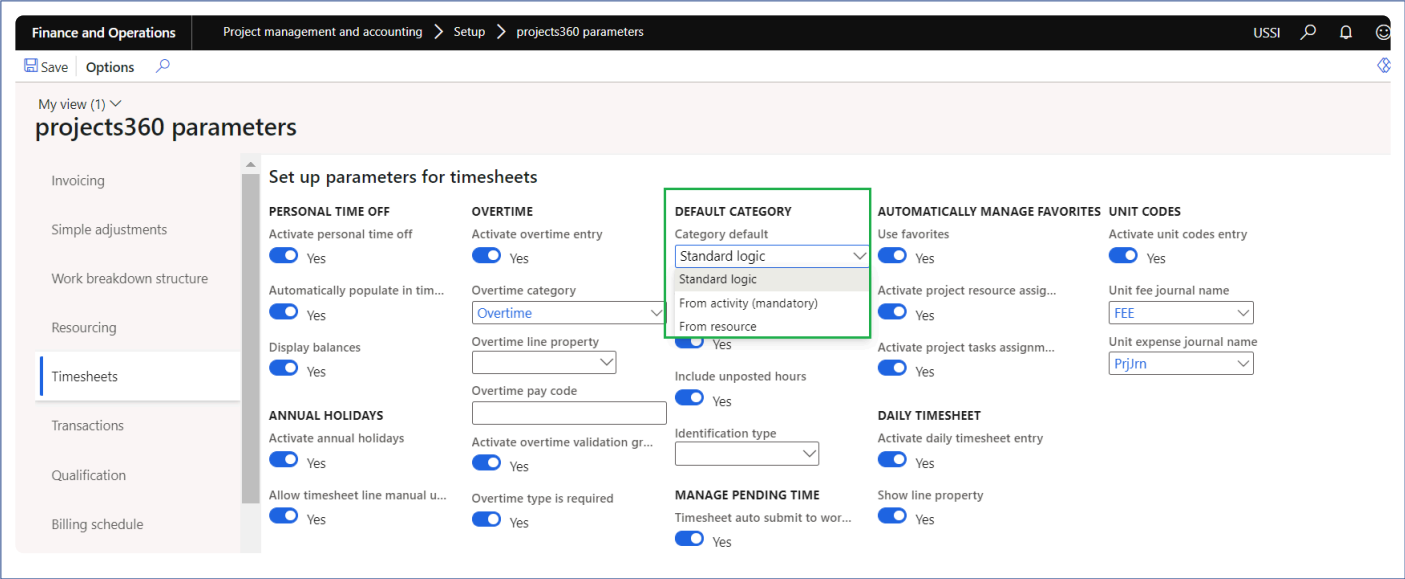

Note – Users can modify or add the unit code on timesheets when timesheet is returned for corrections or modifications.

Misc changes

New option is been introduced for ‘Category field’ on projects 360 parameters form. We have relabeled the existing options and added new option for this enum.

Go to *Project management and accounting > Projects > All projects > Setup tab*

Details of the options are as follows –

Fields	Description
Standard logic	No changes in the current logic.
From activity (mandatory)	If category default is set to ‘From activity (mandatory)’ then category will default on timesheet from activity.
From resource	If category default is set to ‘From activity (mandatory)’ then category will default on timesheet from resource.

New options is been introduced on Projects form to skip the timesheet comments validation as an exception for specific project. These fields are available only when the ‘External comment’ and ‘Internal comment’ parameters are set to ‘Yes’.

Go to *Project management and accounting > Setups > projects360 parameters > Timesheets*

Sales price cap

New field is introduced on sales price – hour 'Sales price cap' for Charges percentage sales price model. This field is controlled through a new parameter 'Activate sales price cap' placed on Transactions tab of the projects360 parameters form. When the Sales price cap is defined and the calculated value is greater than the Sales price cap value then Sales price cap value is considered as Sales price and when the calculated value is lesser than the Sales price cap then calculated value is considered.

Mobile Time Entry PowerApps

We have developed a Mobile Time Entry application using Microsoft PowerApps platform to provide an easier and more operational user experience for mobile devices.

This app provides an intuitive tool for quick creation and submission of timesheets on-the-go completely integrated with Dynamics 365 Finance and Operations. In addition, provides offline capabilities allowing users to still enter their time from the field or while traveling when there is no internet connection.

Installation on mobile devices is quick and straightforward since it will be accessible through the 'Microsoft PowerApps' mobile app for iOS and Android.

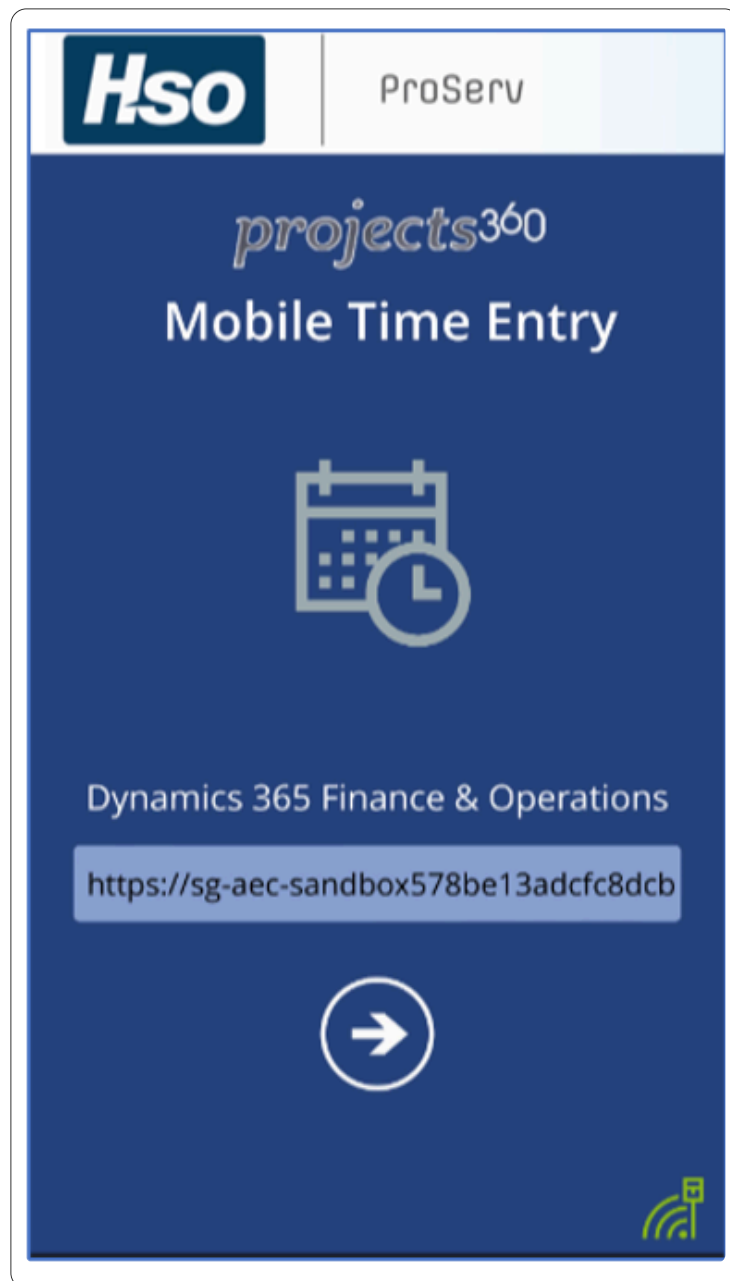

Parameters and UI

This section provides details on the parameters that govern the behavior and functionality of the timesheet app, ensuring users can effectively enable desired features. Additionally, it offers insights into the user interface (UI) elements of the mobile timesheet app. This information empowers users to select suitable color schemes and preferred language settings within the app

Access timesheet app

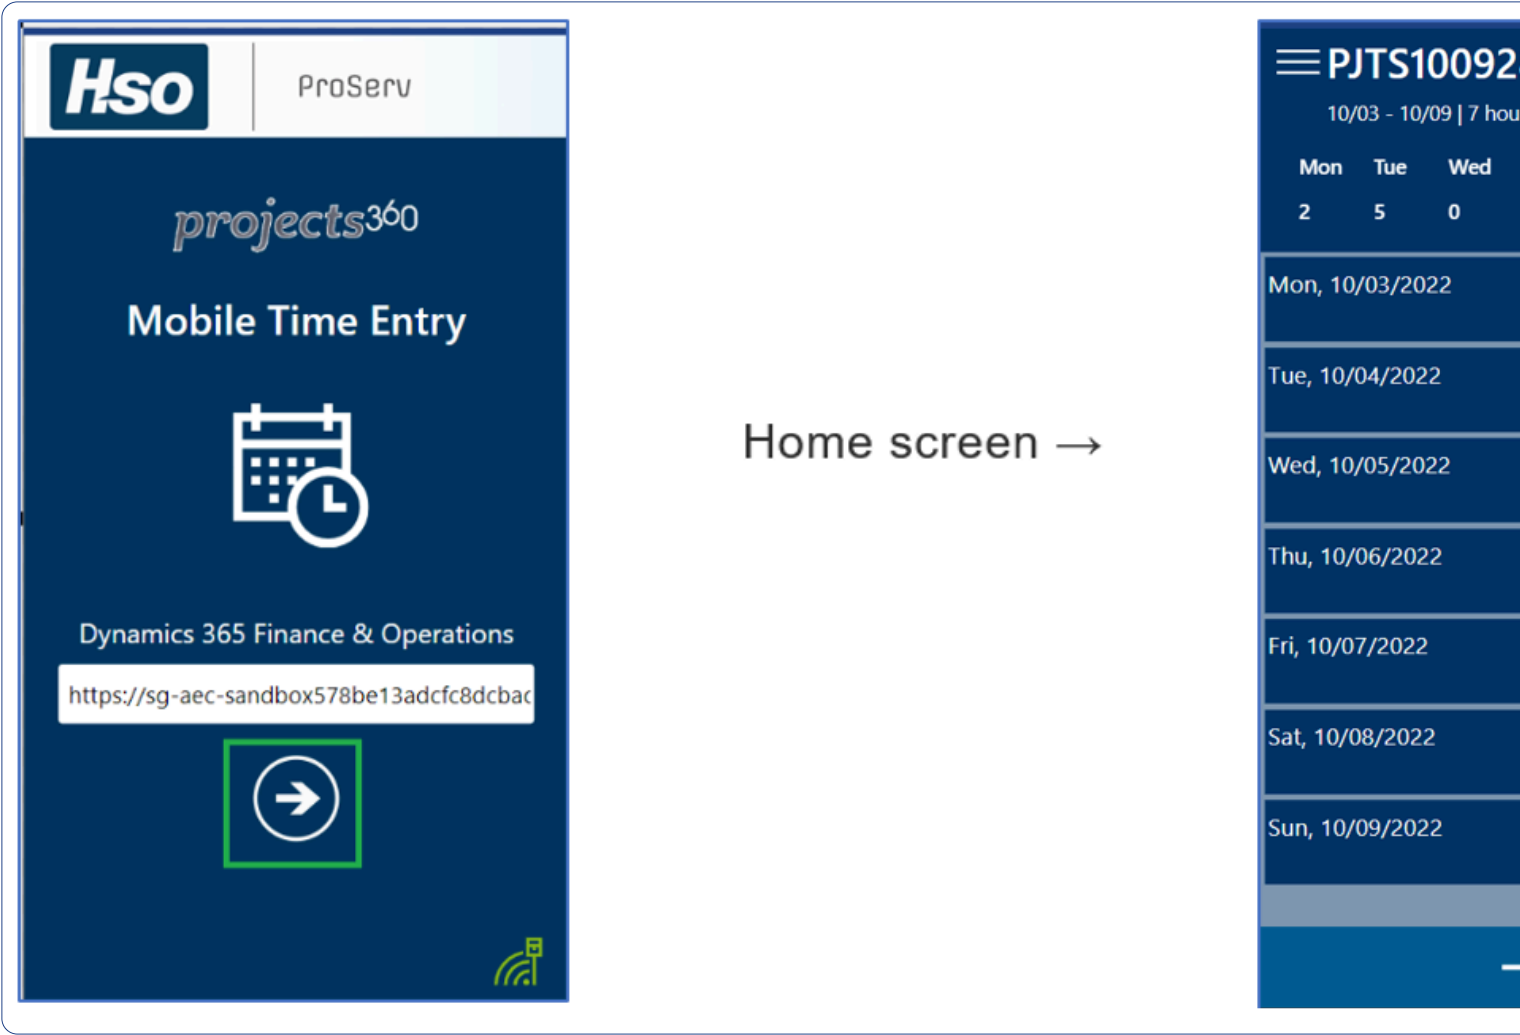

* This section explains the general navigations to reach a home page. This also shows a glimpse of how the timesheet app pages look like and some general UI elements you will see across the app.

Upon launching the application, the user will be automatically directed to the following screen where the user can see the Microsoft F&O environment where the app is going to access to.

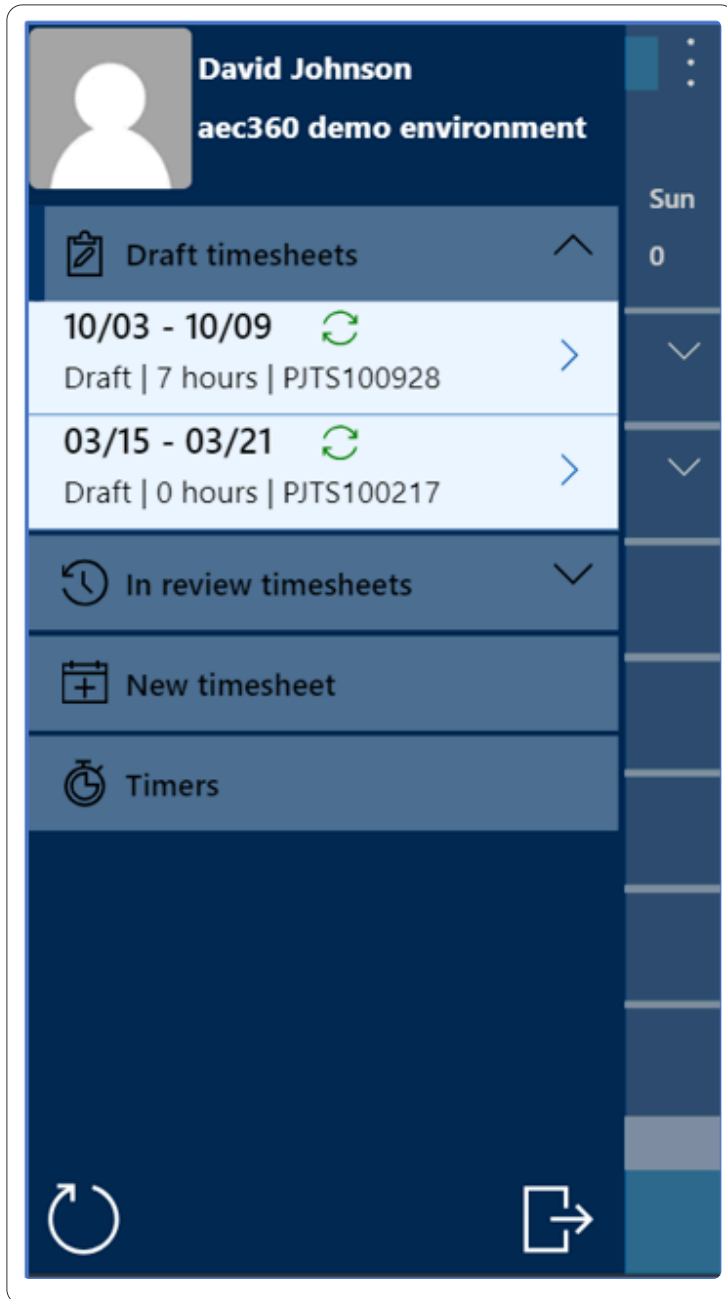

To proceed further, the user needs to click on the highlighted button below. Subsequently, they will access

the application's home screen.

The home screen displays the latest summary of the timesheet. The hours for each day are visible on a day-to-day basis, accompanied by project and activity details. The left navigation pane allows users to browse through timesheets and create new ones as per below snapshot.

The three dots known as “More Options” menu provides functionalities to refresh, delete, cancel or copy timesheets as per below snapshot.

Mobile App Parameters

✿ This section provides an in-depth explanation of all parameters that influence the functionality of the mobile timesheet app. Any configuration changes made to the app must be done within this form to ensure that the modifications are reflected in the app

Parameter Setups

In the Finance and Operations module, the introduction of the Mobile Time Entry tab within the Projects360 parameter form consolidates all parameters related to the timesheet app. These parameters directly impact the functionality available on the app. This section provides a detailed definition of each parameter on the form. Subsequent sections provide further details on how these parameters specifically influence the app’s functionality.

- Go to Project management and accounting > Setups > projects360 parameters > Mobile entry app

Fields	Description
Customer	Display/Do not display/Read-only the customer field on the time entry form.
Category	Display/Do not display/Read-only the category field on the time entry form.
Activity	Display/Do not display/Read-only the activity field on the time entry form.
Line property	Display/Do not display/Read-only the line property field on the time entry form.

Internal comment	Display/Do not display/Read-only the internal comment field on the time entry form.
External comment	Display/Do not display/Read-only the external comment field on the time entry form.
Work location ID	Display/Do not display/Read-only the work location field on the time entry form.
Overtime types	Display/Do not display/Read-only the overtime type field on the time entry form.
Activate timer entry	When this field is set to 'Yes', Timer button is available for the user to enter time based on the time stamp.
Display timer in F&O timesheet	When this field is set to 'Yes', Timers created by the Mobile App are available from the timesheet (browser experience) in F&O opening a new timers form.
Sync timer to 'Start/Stop time' table	When this field is set to 'Yes', Timer will be synced from the mobile app to the Microsoft standard 'Start/Stop' timesheet tables in F&O
Number of listed recent projects	When this field is set with number, those number of recent projects will be loaded in the mobile app as well as they will be available while selecting a project. There are four options provided for user that is 5, 10, 15, 20.
Sync the last posted timesheet	When this field is set with the value, those posted timesheets will be displayed to copy/select recent timesheets. There are four options provided for user that is 5, 10, 15, 20.
Activate unit entry code	When this parameter is set to 'Yes', Unit code entry feature is enabled on the Mobile app for the user to enter the units.
Color theme	Select the color theme for the mobile app. The default theme is Blue, and users can choose their preferred theme which will dynamically apply a related color palette to all forms throughout the application.
Show button to allow negative hour entries	When this field is set to 'Yes', Icon is displayed on the mobile app to enter negative hours.

Note – The three available options to display fields in the time entry form are explained below.

- * **Display** – Displays the field on the mobile timesheet app with option to edit if required.
- * **Do not display** – Fields will be hidden on the UI of mobile timesheet app.
- * **Read-only** – Displays the field on the Mobile timesheet app with non-editable option..

Color themes

✿ *User interfaces and color schemes are subjective to individual preferences. Keeping this in mind, we offer four distinct color themes to choose from: Red, Blue, Green, and a high-contrast white. These color options are designed to make the timesheet app visually engaging and personalized according to your preferences.*

Parameter Setups

On projects360 parameter form, under Mobile time entry tab, User needs select their preferred color and then when timesheet app is shown in the selected color scheme. If the app is in use while making this configuration change, then user has to refresh the app or close and reopen the app for color scheme to take effect.

Multi language

This section outlines the supported languages in the timesheet app and provides guidance on configuring different language preferences within the app to enhance the user experience.

Parameter Setups

Our mobile timesheet app is designed to support a variety of commonly used languages worldwide, including English, French, Chinese, German, and many others. Users can easily switch or select their preferred language within the Finance and Operations user options. Once selected, the app will translate its content to the chosen language, enhancing user accessibility and experience.

Also, date, time and number formats could be different depending on the country or localization. The projects360 mobile app will use the configuration set in F&O for the specific user.

Language configuration can be set from:

- *System Administration > Users > User options > Preferences > Language*
- *Settings > User options > Preferences > Language*

Date, time, and number format can be set from:

- *System Administration > Users > User options > Preferences > Date, time, and number format*
- *Settings > User options > Preferences > Date, time, and number format*

- Japanese = ja
- Icelandic = is

Time entry

This section provides a comprehensive guide on using and accessing the mobile time entry app to record time spent on projects during the timesheet period. It covers essential details on efficiently searching for projects, understanding timesheet workflows, and utilizing the app's offline capabilities. Whether you are navigating through projects, managing timesheets, or working offline, this guide offers valuable insights for effectively utilization of the app's features.

Create time entries

To initiate the creation of a new timesheet, users are required to click on the left navigation pane, select the option for a new timesheet, and subsequently save it. This process results in the generation of a new timesheet for the specified period. User is given an option to select the relevant date and based on the date selected, timesheet period will get defaulted.

To input details into the timesheet lines, the user needs to click on the button below.

The screenshot displays a mobile application interface for project PJS101398. At the top, the project name is followed by a refresh icon and a 'Submit' button. Below this, the date range '10/30 - 11/05' and '0 hours | Draft' are shown. A table lists the days of the week with '0' hours logged for each. Below the table, a list of dates from Monday, 10/30/2023 to Sunday, 11/05/2023, each with '0 hrs' and a chevron icon. At the bottom, a blue bar contains a white plus sign inside a green rectangular box, indicating where to click to add hours.

Internal comment	Enter internal comments.
External comment	Enter external comments.
Line property	Display line property.

Details of the fields available on the Overtime hours tab are as follows:

Fields	Description
Legal entity	Defaults with the current legal entity. User can select the required legal entity.
Overtime type	User can select the overtime type that drives the category and line property.
Customer	This is an optional field where user can select the customer. If the customer is not selected, then it will be automatically populated as soon as the project is entered.
Project	Select project. Project list will be filtered by the selected customer in above field.
Work location ID	Enter the work location ID.
Activity number	Select activity number. Activities will be filtered by the selected project in above field.
Hours	Enter hours for each day of the week.
Internal comment	Enter internal comments.
External comment	Enter external comments.

Timesheet Comments

We have incorporated multiline text fields that allow users to input both external and internal comments for each hour entry. Additionally, users have the ability of copying a comments across all days within the same timesheet line for the entire timesheet period using 'Apply above comments to all days' option.

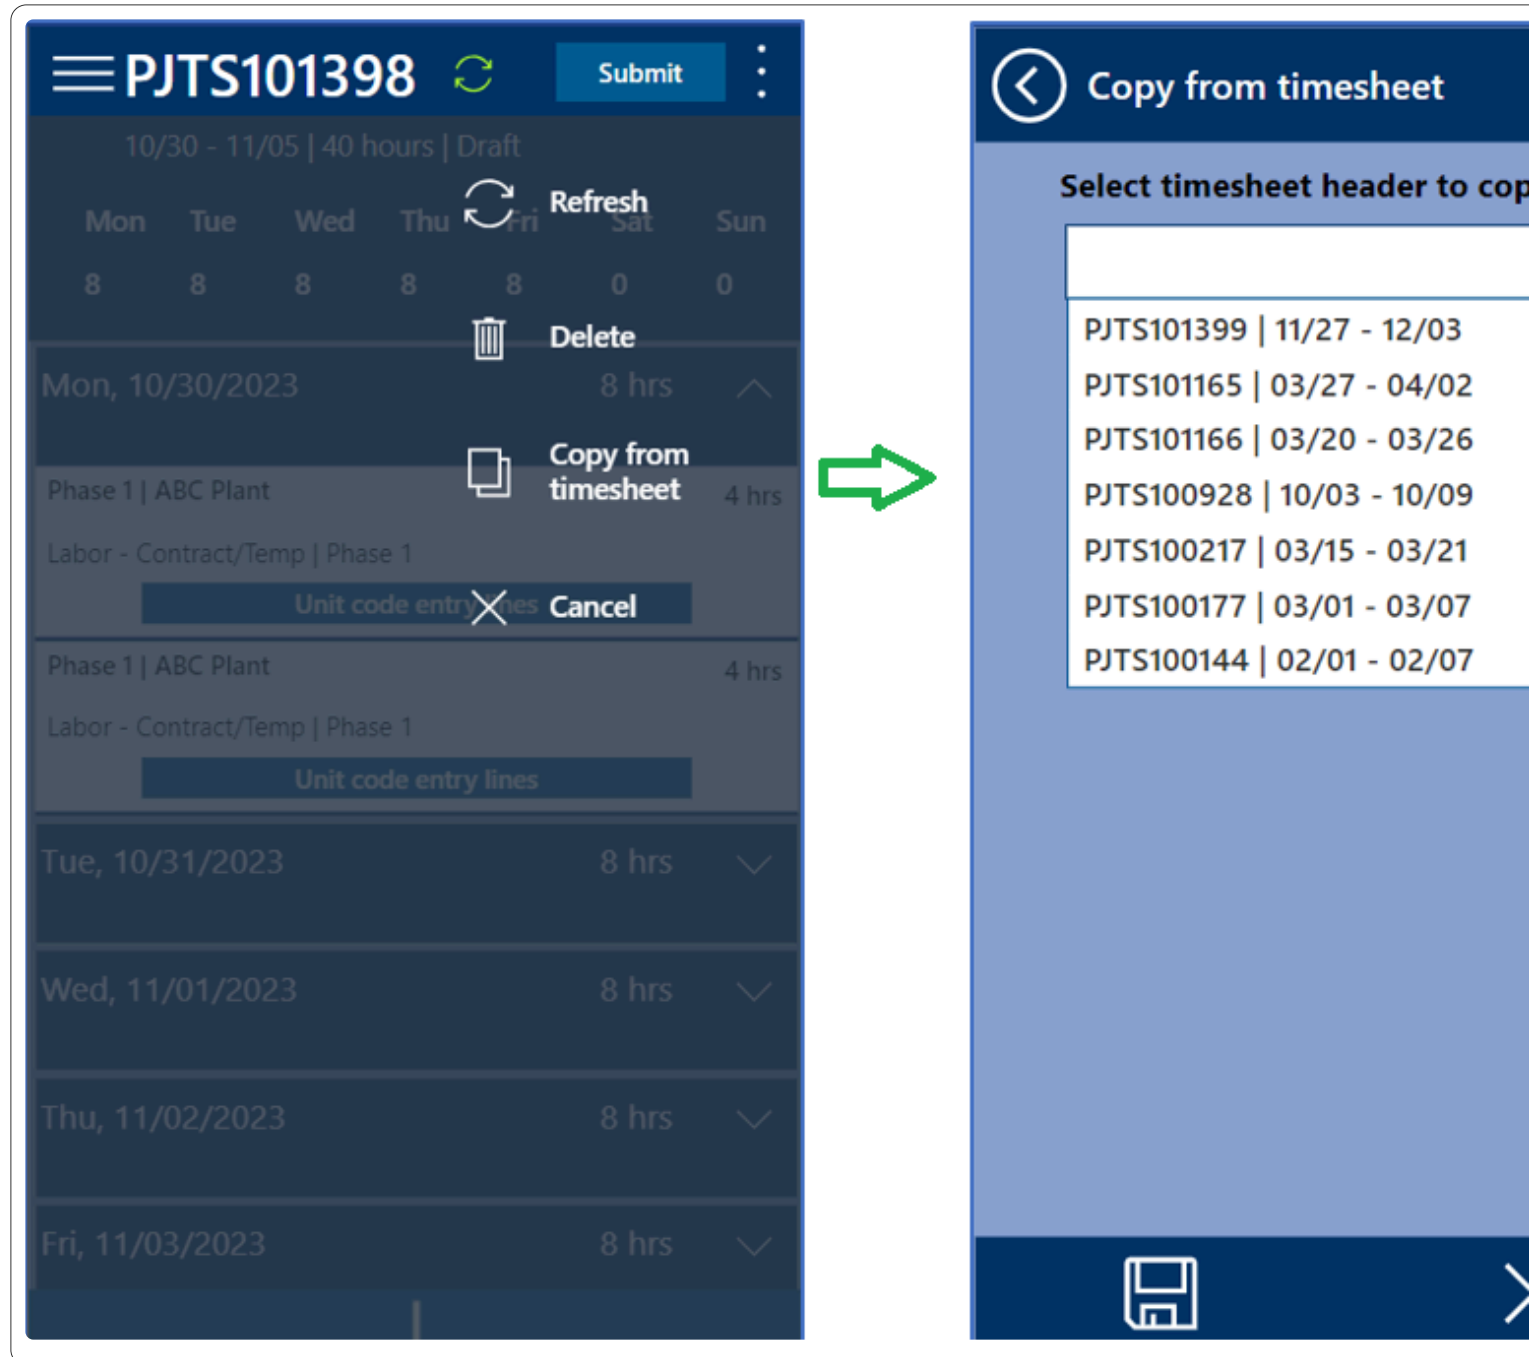

The screenshot displays a mobile application interface for 'Timesheet comments'. At the top, a dark blue header bar contains a back arrow icon and the title 'Timesheet comments'. Below this, the interface is divided into two main sections: 'External comment' and 'Internal comment'. Each section has a light blue header with its respective title and a circular refresh icon. The text 'worked on the project.' is entered into the text area of both sections. At the bottom of the form, there is a checkbox labeled 'Apply above comments to all days'. The bottom of the screen features a dark blue navigation bar with a save icon (a floppy disk) on the left and a close icon (an 'X') on the right.

Copy Timesheet Function

Further in addition to above, we have given an option to users to 'Copy from timesheet' in timesheet app which enables the users to expedite time entry by replicating information from previous timesheet lines. Users can effortlessly select a specific timesheet from their history, and upon copying, they have the flexibility to choose individual lines, add hours along with comments, and swiftly save the updated timesheet.

Users can initiate the 'Copy from Timesheet' function by clicking on the three dots located in the top right-hand corner. Following this, users can select the specific timesheet they wish to replicate.

Upon selecting an existing Timesheet header, users will be presented with a comprehensive view of all associated timesheet lines beneath. Once timesheet is copied user can edit or submit the same.

To facilitate project selection on the timesheet, the app offers users the flexibility of choosing projects from recent, assigned, and search options. Key information is displayed such as project Id, project name, contract description, main project name and customer name.

To choose project, within the ‘Recent’ tab, users can conveniently access their previously used or selected projects, with a dynamic ‘Search’ box available for quick filtering. Notably, for the ‘Project’ field, a filter by customer is also applied on this tab.

Furthermore, within the ‘Assigned’ tab, when the projects360 parameter ‘Activate resourcing enhancement’ is configured as ‘Yes’, the tab will showcase ‘Active’ projects where the user’s resource is assigned within the ‘Resource Forecast’, providing a relevant project list for the user.

Timesheet workflows

This section explains how to use the Mobile Time Entry PowerApp submitting the timesheet workflow.

This functionality allows users to submit and track the status of their submitted timesheet entries. Specifically identifying instances where a submission is still in review or has been rejected by the approver along with the associated reasons for rejection. This feature ensures an efficient timesheet workflow process.

Upon entering and saving the timesheet entry, the application facilitates a smooth submission process. Prior to finalizing the submission, users are provided with a comprehensive overview of the saved timesheet information. Please note that the submission is only available if the mobile device is online and can connect with the F&O environment.

New main menu section called ‘In review timesheets’ displays all the timesheets submitted and which is waiting for workflow approval.

Manage Returned Timesheet Workflow

When timesheets are returned by the approver, such timesheets will appear under 'Returned timesheet' menu section. As soon as a timesheet is returned in F&O it can be refreshed right away within the app.

Returned timesheets will be displayed with an icon. When this icon is clicked, it displays the reason for the return of the timesheet.

Quick Project Search

This section helps in configuring the required parameters to turn on the quick project search functionality on the mobile timesheet app.

We are leveraging the projects360 Quick Project Search feature within the mobile app, providing users with an efficient project search experience. Search fields are dynamically configured based on quick project search parameters in projects360.

Parameter Setup

A set of parameters are available under the projects360 parameters under the Quick project search tab to configure search functionality on the timesheet app. This quick search functionality will list out all the projects (based on the searched text) in an hierarchical order enabling user to select the right project while submitting their time and expense.

Go to Projects management and accounting > Setups > projects360 parameters > Quick project search tab.

Finance and Operations Preview | Project management and accounting > Setup > projects360 parameters

projects360 parameters

Setup for quick project search

Quick project search

Quick project search ☒ Yes

Intercompany project search ☒ Yes

FILTERS

Customer name ☐ No

Subproject name - level 2 title
Sub-phase

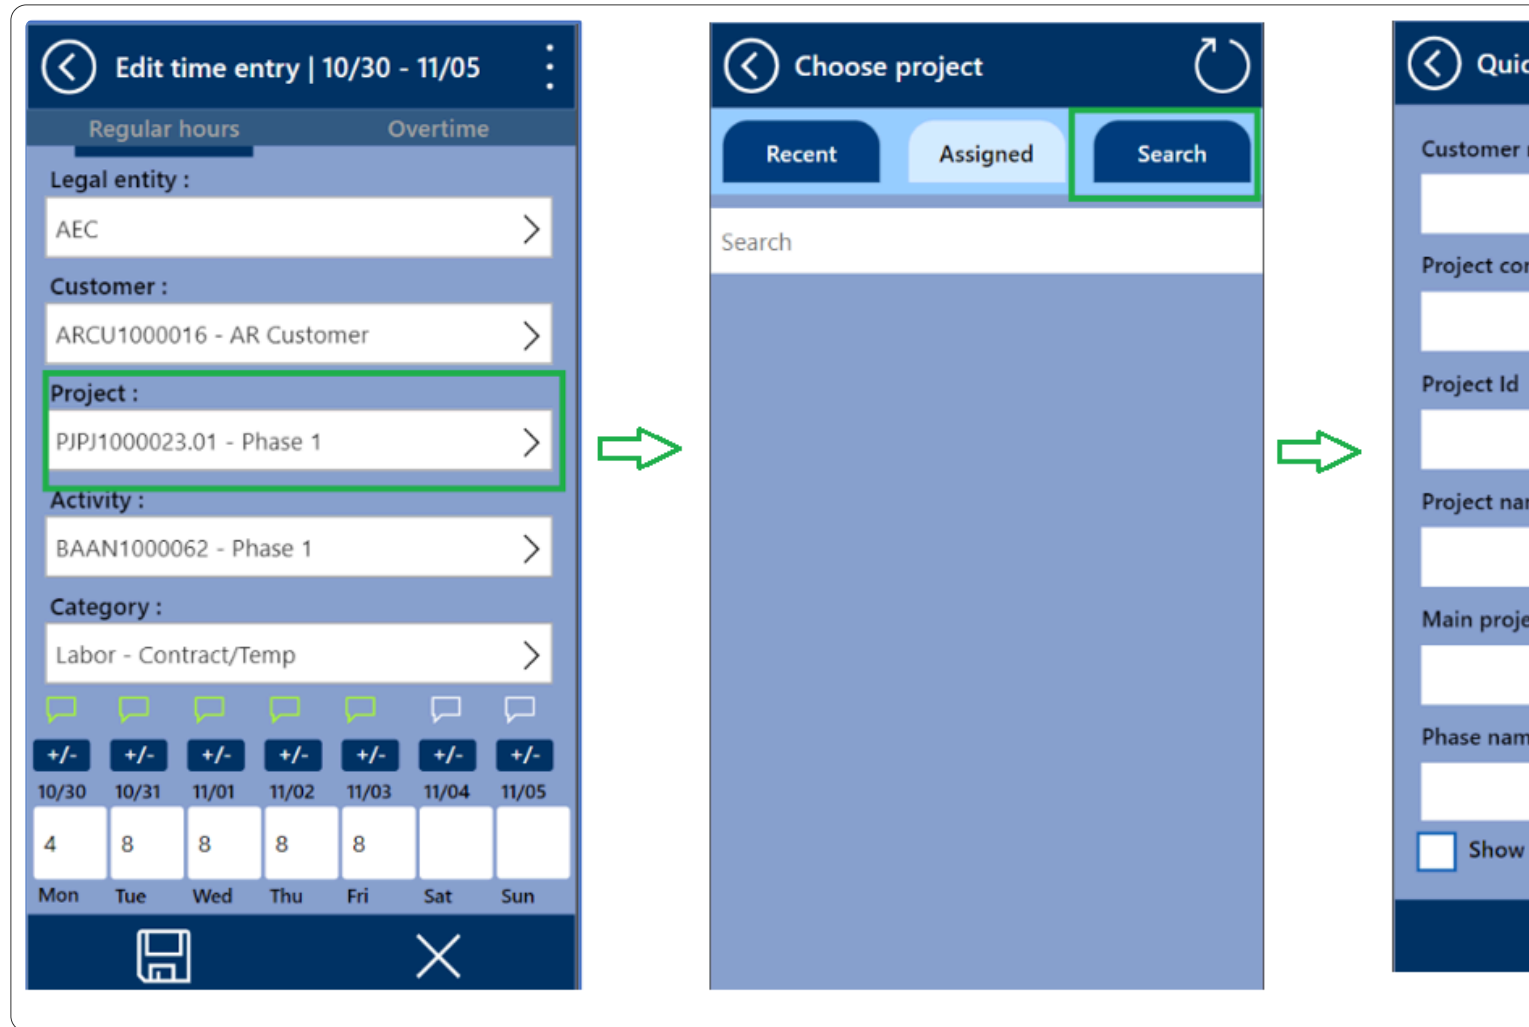

Below are details of the fields available on this tab –

Field name	Description
Quick project search	This field allows to activate the quick project search functionality on timesheets and expense reports.
Intercompany project search	Enabling this parameter will allow searching the desired project across all the legal entities. If this is off then, search will look for only project within the current legal entity.
Customer name	If parameter is turned on, projects can be search on the timesheets and expenses reports based on customer.
Project contract name	If parameter is turned on, projects can be search on the timesheets and expenses reports based on project contract.

Project name – level 0	If parameter is turned on, projects can be search on the timesheets and expenses reports based on root/base project.
Project name – level 0 title	Once you enable the ‘Project name – level 0’ parameter, this field will enabled for you enter a friendly name to be shown the timesheets and expense report search window.
Subproject name – level 1	If parameter is turned on, projects can be searched on the timesheets and expenses reports based on level 1/sub-projects.
Subproject name – level 1 title	Once you enable the ‘Subproject name – level 1’ parameter, this field will enabled for you enter a friendly name to be shown the timesheets and expense report search window.
Subproject name – level 2	If parameter is turned on, projects can be searched on the timesheets and expenses reports based on level 2/sub-subprojects.
Subproject name – level 2 title	Once you enable the ‘Subproject name – level 2’ parameter, this field will enabled for you enter a friendly name to be shown the timesheets and expense report search window.
Project ID	If parameter is turned on, projects can be search on the timesheets and expenses reports based on actual Project ID.
Project name	If parameter is turned on, projects can be search on the timesheets and expenses reports based on actual Project name.

Using search on timesheet app

To initiate a quick project search, users simply click the search option during project selection. The user can also view Intercompany projects when ‘Show intercompany projects’ checkbox is marked.

Offline capabilities

We have designed the app to allow users to create timesheets even if the mobile device is offline. The application will synchronize offline stored data to F&O once an internet connection is re-established. Additionally, it identifies any errored-out lines during synchronization and initiates automatic retries after addressing the issues. Users can easily identify timesheet lines that are offline locally stored and waiting to be synced later when the connectivity is back. Also, Timers and Unit code entry functionality have offline capabilities.

The screenshot displays the ProServ app interface for timesheet management. At the top, a header bar shows a menu icon, the ID '00001312', a refresh icon, and a 'Sync' button. Below this, a summary row indicates the period '05/01 - 05/07' and a total of '6.5 hours'. A table follows with columns for the days of the week (Mon to Sun) and corresponding hours: Mon (2), Tue (0), Wed (0), Thu (4.5), Fri (0), Sat (0), and Sun (0). The main body of the app lists individual timesheet entries. Each entry shows the date, the number of hours, and a list of project tasks. For example, on Thursday, 05/04/2023, there are 4.5 hours recorded, with tasks including 'City Manufacturing_sub | City Manufacturing_new' (2.5 hrs) and 'Brakes & Gears XRM | Brakes and Gears' (2 hrs). A large plus sign at the bottom indicates the option to add new entries.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
2	0	0	4.5	0	0	0

Date	Hours	Tasks
Tue, 05/02/2023	0 hrs	
Wed, 05/03/2023	0 hrs	
Thu, 05/04/2023	4.5 hrs	City Manufacturing_sub City Manufacturing_new (2.5 hrs) Brakes & Gears XRM Brakes and Gears (2 hrs)
Fri, 05/05/2023	0 hrs	
Sat, 05/06/2023	0 hrs	
Sun, 05/07/2023	0 hrs	

Timer entry

This section provides a comprehensive guide on creating and managing timers within the timesheet mobile application. Timers are very important for linking the actual time spent in tasks with the corresponding entries in the timesheet. This functionality not only enhances accuracy but also streamlines the process, ensuring a precise and efficient recording of time spent on various activities.

This timer functionality also updates the standard Microsoft timer tables hence keeping the custom and Microsoft tables in sync.

Configure

✿ This section helps in activating the timer for the time entry based on below parameters to on the mobile timesheet app.

Parameter Setup

Go to *Project management and accounting > Setups > projects360 parameters > Mobile time entry*

Finance and Operations

Project management and accounting > Setup > projects360 parameters

When the above parameter is set as “Yes,” a new menu button labeled “Timer Entries” will be prominently displayed in the general menu of the application.

Create timer

Timer Creation

This section explains that how timers can be created automatically and manually in timesheet mobile app once the required set-up is enabled. Below timer field will be visible once the set-up is done as explained in the configuration section.

When the “Timers” button is clicked, new page will be opened displaying all the open timer entries.

The screenshot displays a mobile application interface for 'Timers Entries'. At the top, there is a header bar with a hamburger menu icon on the left, the title 'Timers Entries' in the center, and a vertical ellipsis menu icon on the right. Below the header is a list of nine timer entries, each represented by a dark blue card. Each card contains three pieces of information: a date (all are 'Thu, 11/30'), a description, and a recorded time followed by a chevron-down icon. The entries are: 'Working on bug unit code' (00:00:21), 'Time review workflow' (00:00:35), 'Time review workflow' (00:00:36), 'Start stop time' (00:48:18), 'Start stop time' (00:48:18), 'Start stop time' (00:48:18), 'Manual enter time' (02:00:00), 'Manual start stop time' (05:00:00), and 'Start stop time' (03:00:00). At the bottom of the list is a large dark blue button with a white plus sign, used for adding new entries.

Date	Description	Time
Thu, 11/30	Working on bug unit code	00:00:21
Thu, 11/30	Time review workflow	00:00:35
Thu, 11/30	Time review workflow	00:00:36
Thu, 11/30	Start stop time	00:48:18
Thu, 11/30	Start stop time	00:48:18
Thu, 11/30	Start stop time	00:48:18
Thu, 11/30	Manual enter time	02:00:00
Thu, 11/30	Manual start stop time	05:00:00
Thu, 11/30	Start stop time	03:00:00

A '+' button will be displayed at the bottom section of the form, enabling users to effortlessly create a new 'Timer entry' for enhanced convenience and it will allow the user to see some of the "Timer entry" details (fields) such as Description, Recorded time, Start date, Stop date, Start time, Stop time, timesheet and line number.

Timer entries

03/01/2023 Timer 1 description 00:32:05 ▾

03/02/2023 Timer 2 with a longer description 00:32:05 ▴

Link/Unlink timesheet to timers

Timers can be linked to timesheet lines. The user can either do it from the 'Timer Detail' form or from the "Time Entry Detail" form.

Once the timer record is created and saved then user can link it to timesheet from the "Link/Unlink timesheet".

- Select 'Link timesheet' menu item.
- Select timesheet header.
- Select timesheet line.
- In addition, '+ New timesheet line' button will allow the user to create a new timesheet line if there is no existing one to link to.

The timesheet can be unlinked from the timer anytime.

- Select 'Unlink timesheet' menu item.
- Click 'Unlink'.

- The timer will be updated to status “Related to timesheet line”. In this status the timer can’t be either reset or modified anymore.
- However, the option ‘Unlink timer’ will be available from the timesheet line while the related timesheet header is still in “Draft” or “Returned” status.

Users have flexibility to utilize the timer in timesheet app in offline mode. When the app reconnects online, the following fields will be synchronized and stored, ensuring seamless integration with FO for all time entries.

- Timer Id
- Timer description
- Recorded time
- Start date
- Start time

- Stop date
- Stop time
- Status
- Timesheet Id
- Timesheet line record Id
- User Id
- Worker Id

Compatibility with standard

We have elevated our new timer feature to seamlessly integrate with existing Microsoft standard functionality. This enhancement enables users to effortlessly record start/stop times through the timer, bridging the gap between the Mobile Time Entry Power App and the F&O App. To uphold data integrity, users are restricted from modifying timers in the Power App if the time was recorded in F&O, and vice versa.

We have a new parameter called “Sync timer to ‘Start/Stop time’ table” projects360 parameters as shown below. If such parameter is set as “Yes”, then this process will sync the timer information to the standard “Start/Stop time” tables in F&O as well containing the timer information related to the specific timesheet line.

☒ ☐ ☐ ☐

Note – Standard “Require start/stop time” parameter is required to activate on “Project management and accounting parameters” form and ‘Require start/stop time’ on the Resource setup.

After this is parameter is activated, the app behaves like MS start/stop time functionality, not allowing the users to manually update the hours on the timesheet lines. Hours can only be updated through the timers.

Unit codes entry

The existing Finance and Operations feature “Unit code entry” for Timesheets is also added on Timesheet mobile app. The purpose to include this feature in timesheet mobile app is same as in FO which allows users to enter Unit codes for billing purposes directly from the timesheet mobile app. Based on the unit codes entered by the user from the timesheet mobile app, such information syncs to FO in the timesheet that will automatically create necessary expense journal and/or a fee journal generating project transactions for billing purposes.

Configure

 This section helps in configuring the required parameters to turn on the Unit code entry that is used on Mobile app to fill in the timesheet.

To use this feature in mobile timesheet app, there are below pre-requisite configurations are required in FO.

Parameter Setup

Go to *Project management and accounting > > Setups > projects360 parameters > Timesheets*

Creation of Unit codes entry

* This section helps in creation of the Unit code entry that is used on Mobile app to fill in the timesheet.

User can open the Unit code entry lines through the button placed under the timesheet lines.

The screenshot shows a mobile application interface for a timesheet. At the top, the project ID 'PJTS101399' is displayed next to a refresh icon and a 'Submit' button. Below this, the date range '11/27 - 12/03' and '11 hours | Draft' are shown. A weekly summary table follows:

Mon	Tue	Wed	Thu	Fri	Sat	Sun
1	0	0	10	0	0	0

Below the summary, a detailed view for 'Mon, 11/27/2023' shows '1 hrs' and an expand/collapse icon. Underneath, the task 'Phase 1 | ABC Plant' is listed with '1 hrs'. A sub-task 'Labor - Contract/Temp | Phase 1' is also shown. A blue button labeled 'Unit code entry lines' is highlighted with a green border. The bottom of the screen features a large blue button with a white plus sign.

When user clicks this button it opens new “Unit code entry lines” form for the specific timesheet line and user can input unit code along with quantity.

🔍

Unit code	Description	Mon 11/27	Tue 11/28	Wed 11/29	Thu 11/30	Fri 12/01	Sat 12/02	Sun 12/03	Total
Test Fee	Test Fee	2.00	5.00	6.00		3.00	3.00		19.00

In offline mode, the mobile device securely stores unit codes within its local storage. Once the mobile device reconnects to the network, the stored unit code entry records are synchronized with Finance and Operations. This synchronization process ensures that unit code entries are updated between the timesheet app and Finance and Operations for all open timesheets.

Transaction Enhancements

The features enhanced or newly created, relating to project transactions have been grouped together in this document. The projects360 features grouped together in this segment are:

[Unit Based Billing](#)

[Revenue Recognition](#)

[Dimension Inheritance](#)

[Workflow Modifications](#)

[Workflow Administrator](#)

[WBS Modifications](#)

[Pricing Multiplier](#)

Select a feature to view more details about them.

Unit Based Billing

Many professional services firms bill for the quantity of work done rather than on the hours consumed for the work completed. some examples of unit billing are head count billing, billing by team size, number of cases closed, etc. For such billing scenarios there is no elegant solution in Microsoft Dynamics 365 for Finance and Operations. To better support various quantity based scenarios, and IFRS 15 regulations, projects360 suite now includes the unit based billing feature.

To improve this limitation, the Unit Billing feature has been introduced. This feature has been designed to provide all kinds of experiences/processes required in a billing scenario, from forecasting to billing including revenue recognition.

Configure Unit Billing

 This section details the setups required to be configured for the Unit Billing feature to work.

Parameter Setup

A new tab called ‘Unit billing’ has been introduced in the projects360 parameters form. All the fields and controls relevant to unit billing are available on this tab.

Go to *Project management and accounting > Setup > projects360 parameters > Unit billing tab*

Finance and Operations

Project management and accounting > Setup > projects360 parameters

Unit billing model

UNIT

Method of calculation

Resource per week

Parameters available on this form and functionality involved are as follows:

Fields	Description
Activate unit billing	Enables the feature when the checkbox is set to yes.

Unit billing model	<p>Select the forecast model that will be used for storing the forecasts of the unit billing.</p> <p>As of today, model selected on this field is allowed to be selected in other places as well, but we advise you to keep these models different from one another in order to see the correct forecast results.</p> <p>Locking down of this forecast model from being used in other forms will be delivered to in the future versions.</p>
Method of calculation	<p>Select method of calculation to default when new forecast lines are created.</p>

Forecast Units

✿ This section details how units and revenue can be forecasted. Different methods of forecasting are explained in this section.

Unit Forecasting

The user will be able to forecast unit based revenue using this functionality, at a project level. Apart from unit forecasting, the user will be defining the method of calculation which will form the basis for the quantity update of the forecast lines, which will then be available for project billing. In the same process the user can specify the revenue recognition method, if the unit billing has to be deferred over a period of time.

Unit forecasting form

Unit forecasting is the new form that has been created, where users can enter the unit forecasts. The data can be imported from WBS too, where the WBS lines for the transaction type item will be imported into this form using forecast model defined in Unit billing parameter.

In this form, as soon as the forecast is created an item requirement is generated behind the scenes.

Go to Project management and accounting > All projects > Select the project > Unit billing tab > Unit billing forecast

UNIT BILLING FORECAST | 00000303 : BMRCL

FORECAST
Proposal ignores forecast dates: No
Model: UNIT

INVENTORY DIMENSIONS
Site: MainOffice
Warehouse:

This form comprises of two sections:

Left hand section – Where all projects and subprojects will be listed from the current legal entity.

Right hand section – This section is further divided into two fast tabs:

Overview – Displays the unit billing forecasts for the selected project. If the parent project is selected then it all the unit billing of project and subprojects are displayed.

General – Details of the line selected on the overview tab are displayed here.

Fields available on Overview tab are as follows:

Fields	Description
Method of calculation	This field is used to derive the quantity that has to be updated for the forecast line, when the Quantity Unit proposal is generated.
	Based on the method selected in this field the quantity that can be updated for the line is proposed, based on resource timesheet and team timesheet. Below are the methods of calculation available to handle user timesheet records to update quantity.
	Manual: This method of calculation allows users to update the quantity manually for the proposal line which is created in update and post unit proposal, however the user will be able to update these quantities to anything that is desired.
	Resource per day
	Resource per week
	Resource per month
	Resource team per day
	Resource team per week
	Resource team per month
	In the above methods, the timesheet hours are considered for the quantity update. For example, when set to Resource per day, the timesheet entered for the resource for the day will be considered as quantity one. In case there are three resources booking time for the same project on the same day then this quantity will be three.
	These are the proposed values, however the user will be able to update these quantities to anything that is desired.
	However, for the methods where team is included irrespective of the number of resources, the quantity will be considered as one for the quantity update.
	Quantity per day

	<p>Quantity per week Quantity per month Quantity per quarter Quantity per year</p> <p>In these methods of calculation, the proposed quantity will be considered for the period specified in the Periodic quantity.</p> <p>For the method of calculation of type – Quantity, the Periodic quantity update field is enabled for the user to update quantity that has to be updated for the period chosen in the method of calculation. For example, if this is 2, and the method of calculation is Quantity per week, then the quantity update will be 2 per week of update.</p> <p>In Timesheet entry method of calculation, the proposed quantity will be considered from the posted Unit code on the timesheet for a given period of time.</p>
Project name	Shows the project name.
Activity number	Shows the activity number transferred from WBS or manually selected on this form.
Activity name	Shows the activity name based on activity number.
Unit code	Select Unit code when method of calculation is Timesheet entry.
Item number	Shows the item description based on item selected. user will be able to modify item description field to anything that is desired.
Decription	Shows the item description based on item selected. user will be able to modify item description field to anything that is desired.
Sales quantity	Shows the sales quantity transferred from WBS or manually entered on this form.
Unit	Unit of measure defaults from the selected Item.
Sales price	Shows the sales price amount transferred from WBS or manually entered on this form.
Currency	Displays the sales price currency.
Start date	Shows the start date transferred from WBS or manually entered on this form.
End date	Needs to enter manually on this form. This date is required while creating a proposal.

The buttons available on this Overview grid are as follows:

Buttons	Description
New	Creates a new item forecast line.
Delete	Delates the item forecast line.

The buttons available on the action pane are as follows:

Buttons	Description
Save	Saves the records on the form.
General ledger preview	Shows the ledger entries that will be impacted after processing the selected line.

There are three tabs added to the below grid. Details and fields on these grids are as follows:

General Tab

Fields available on this tab are as follows:

Fields	Description
Category	The project category to which the item is associated is displayed in this field. User will be able to modify Category value to anything that is desired.
Line property	Displays the line property of the transaction. User will be able to modify line property value to anything that is desired.
Method of Calculation	Displays the method of calculation chosen on the forecast line. If the Method of Calculation is a quantity related then the next field – “Periodic quantity” will be enabled to enter the quantity value.
Calendar	Calendar that has be considered for the method of calculation is displayed in this field.
Periodic quantity	This field is enabled only when method of calculation is Quantity related, then user will be able to update fixed quantity for the period.
Proposal Ignores forecast dates	Based on this checkbox being set to yes or no, the forecast dates are considered for the proposal. When set to “No” – the forecast dates are honored, or else they are ignored while generating the quantity proposal.
Model	Displays the Unit forecast model used in the forecast.
Inventory dimensions	The mandatory inventory dimensions are displayed in this tab.

Unit Forecast tab

In this tab the user will be able to allocate the forecast lines into various periods. This is more for reporting purposes. The fields available on this grid are as follows:

Fields	Description
Date	Displays the date of the unit forecast line.

Sales quantity	Displays the sales quantity defined on the forecast line.
Unit	Displays the unit of measure.
Amount	Displays the Forecasted amount.
Currency	Displays the forecasted amount's currency.

The buttons available on this grid are as follows:

Buttons	Description
Forecast allocation	<p>The forecast lines will be split/allocated into multiple lines based on this field. The options available are:</p> <p>Manual – Where the user can manually allocate the forecast line. Day – The forecast line will be split for the number of days lying between start and end date of the forecast line. Week – The forecast line will be split for the number of weeks lying between start and end date of the forecast line. Month – The forecast line will be split for the number of months lying between start and end date of the forecast line.</p>
Manual quantity update	<p>Based on this checkbox the manual update is possible. Though the allocation quantity is updated based on the choice made in the forecast allocation, the user can update the fields manually if this option is set to yes. Though the user updates the lines in this tab, the same is not reflected onto the forecast lines at the header level.</p>
Total forecast quantity	Displays the total quantity forecasted.

Revenue recognition tab

This tab show the revenue recognition details selected on line in overview tab. The fields available on this grid are as follows:

Fields	Description
Revenue recognition	<p>The methods that available for revenue recognition is displayed in this field. Immediate – Revenue is recorded immediately. Deferred schedule – Where the revenue amount is split over the revenue periods. Once this option is selected, the related fields will be enabled. However for the user to be able to choose this value, the category associated with the item should be setup as a deferred revenue category. Refer the Deferred revenue category setup.</p>
Revenue period	<p>If the revenue recognition method is deferred then the deferral period is displayed in this field. This value is arrived from the deferred revenue ID.</p>

Category	Category is displayed – Deferred revenue category used for revenue recognition is displayed in this field.
Deferred revenue item	Displays the item that is being deferred.
Posted revenue	Displays the posted revenue – Posted revenue category used for revenue recognition is displayed in this field.

Create Unit Proposals

 This section details how unit proposals can be created or updated.

Quantity Proposals

For every unit forecast line there is an item requirement line that is created behind the scenes, which has to be quantity updated for the invoicing to take place. In this feature, the quantity update is generated through a proposal. This proposal generation depends on what is defined in the method of calculation field. For this functionality two new forms are created and is explained in the below sections.

Create Unit Proposals

In this form the user can create unit proposals. The basis for generation of this proposal is the method of calculation field. The user can choose dates for which the proposal is to be generated.

Based on the period selected and the method of calculation, the proposed quantity that can be updated as completed against the forecast line is proposed to the user. The calculation of the proposal is displayed for the user to be able to view and edit the quantity if required.

The proposal generated can be viewed in the Update and Post Unit proposals form.

Example of the unit proposal generation:
Unit forecast line is from 10/01/2018 to 12/31/2018, and the method of calculation is set to “Resource per month”. The create unit proposal is run for the period 10/01/2018 to 12/31/2018, assuming that the resource has entered timesheets for the selected project in all the months, the same will be updated as quantity one per month, thus the quantity 3 will be displayed against this forecast line In the Update and Post unit proposals form.

The fields available on this form are as follows:

Fields	Description
Start date	Start date that has to be considered for the unit proposal generation.
End Date	End date that has to be considered for generating the unit proposal.
Overlap	<p>This checkbox determines whether the proposal should consider the dates for which the proposal has been previously run.</p> <p>If this option is set to “Yes”, then the proposal will include the dates in which the proposal has been created previously.</p>

	When this option is set to “No”, only the period for which the proposal has not been created will be considered for the quantity calculation.
Records to include tab: Filter Project	The project from which this update is being run, is defaulted in this field and the user is not allowed to update.
Method of calculation	Filters the records based on the method of calculation.
Activity number	Filters the records for the selected activity number/numbers.
Run in the background tab	Has all the standard options available for running this process in batches.

UPDATE AND POST UNIT PROPOSALS | 00000299 : ABP_15102018-UB-4

Remove

Lines

Post

Description	Start date	End date	Unit	Sales price	Currency	Quantity	Sales amount	Posted hours	Unposted hours	Status
Day	10/1/2018	10/6/2018	Day	150.00	USD	5.00	750.00		5.00	Posted
Day	10/16/2018	10/31/2018	Day	150.00	USD		0.00			Draft
Week	10/1/2018	11/4/2018	Week	2,100.00	USD		0.00			Draft

The fields available on this form are as follows:

Fields	Description
Description	Item description is displayed in this field.
Start date	Start date of the proposal run.
End date	End date of the proposal run.
Unit	Displays the unit of measure.
Sales price	Displays the sales price of the item.
Currency	Currency of the sales price is displayed in this field.
Quantity	Quantity that is proposed from the proposal run. The quantity displayed in this field is the sum of the quantity of all the lines. You can view the breakup of this quantity in Lines.
Sales amount	Sales price * quantity is the sales amount.
Posted hours	When the method of calculation is Resource...., the posted timesheets that were considered for arriving at the quantity is displayed in this field.
Unposted hours	When the method of calculation is Resource...., the unposted timesheets that were considered for arriving at the quantity is displayed in this field.

Status	Displays the status of the proposal, whether the same is posted or not.
--------	---

The Buttons available on this grid are as follows:

Fields	Description.
Remove	Removes lines from the proposal that is generated and is not yet posted.
Lines	Lines displays/opens up a new form – Lines. The details of this form is displayed below.
Post	<div><p>This button takes you to the posting form in which the user is allowed to choose the date on which the quantity update is to be posted, in case the user would like to post on a date other than transaction date.</p><div><div>?</div><div><div>Post</div><div>Post to ledger on date other than transaction date</div><div>Ledger date</div><div><input type="text"/></div><div><div>OK</div><div>Cancel</div></div></div></div></div>

On the Lines form users can see the details of the created proposal – the start date, end date, quantity, posted hours and un-posted hours can be seen. Details of each of these fields can be found in the subsequent sections.

Status	Displays the status of the proposal, whether the same is posted or not.

All the buttons and fields under General, Unit forecast, Revenue recognition functions same as “Update and post unit proposals” form.

Revenue & Invoicing

This section details how the revenue is recognized and invoicing will be performed for these unit proposals.

Revenue Recognition

The revenue recognition of unit forecast lines is defined on the unit forecast line under the revenue recognition fast tab. Two methods of revenue recognition are available in this feature, one is immediate and the other is deferred revenue recognition. When the method is set to immediate, the revenue is recognized immediately, whereas when the method is set to Deferred, the revenue is deferred over a period of time based on the deferment schedule selected. To know more about the deferment of revenue, please read [Revenue Recognition](#) article.

Invoicing

The user will be able to invoice the units that have been posted using the Update and post unit proposals form. All lines that are in the status posted will be considered for the invoice that is raised from the project.

The project invoice will respect all the rules that are defined in the invoicing group that is attached to the invoice, when the projects360 invoice grouping feature is used. To know more about the raising invoices and grouping transactions based on various attributes, please read [Invoice Grouping](#) article.

Revenue Recognition

Advance payments received for services to be provided in the future are a liability, such as deferred revenue. The revenue is recognized in the period(s) that service is provided. This feature has been developed to distribute the revenue received when services are provided.

The transaction type of fees has been considered for deferment in this feature. A fee journal is deferred over a period of time and accounted as a revenue when the deferment is posted.

Configure Revenue Recognition

 This section details the configuration process involved in the revenue recognition.

Parameter Setup

To activate the revenue recognition feature set the ‘Activate revenue recognition schedule’ option to Yes.

Go to *Project management and accounting > Setups > projects360 parameters > Transactions tab*

Note

12 Months Deferment

Description for some of the fields and buttons used on the form are as follows:

Field/Button	Description
New	Click to create new deferred revenue ID.
Delete	Click to delete existing revenue period.
Revenue Period	Specify an identification of revenue recognition which will be used as the reference.
Description	Specify a description of the revenue period.
Period for allocation	Select the period for allocation. This defines installment is to be distributed in terms of weeks, months or years.
Number of allocations	Enter the number of periods for which the deferment is desired.
Notes	Specify a brief description or note for the revenue recognition.

Number Sequence Setup

The revenue that is received is deferred over a period of time and when the actual revenue is posted per month, it is known as the deferred revenue reversal. For such a journal the number sequence has to be set

up in the project management and accounting parameters form.

Revenue recognition reversal reference is added to the project management number sequence as soon as the user activates the Deferred revenue – Activate deferred revenue fee. Select the number sequence code for the reference – Deferred revenue reversal.

Go to Project management and accounting > Setups > Project management and accounting parameters

Cost accounts

Define the below accounts in the fee categories to track the deferred and posted revenues:

- Invoiced revenue – Deferred category
- Accrued revenue sales value – Deferred category
- Accrued revenue sales value – Posted revenue

The entries on posting of fee invoices would be as follows:

- On invoicing the fee journal, the below entry would be generated as per standard.

Customer balance account Dr. (Main account say 30040)	\$1,000	
Invoiced revenue (picked from deferred revenue category say 11040)		\$1,000

- When posting the deferment, the below entry would be generated.

Accrued revenue – sales-value Dr. (deferred revenue category say 11040)	\$100	
Accrued revenue – sales-value (posted revenue category)		\$100

Deferment Process

 This section details the deferment process i.e. creating fee journal, scheduling the deferment transactions and finally deferment posting.

Fee Journal Posting

Deferment functionality has been provided on a fee journal. On a fee journal based on the whether the fee category has been marked for deferral, the checkbox to defer the fee journal will be available. The fee journal form has been modified for this feature to include two menu items.

Go to *Project management and accounting > Journals > Fee > Lines*

The screenshot shows the Dynamics 365 Finance and Operations interface. The breadcrumb trail is: Project management and accounting > Projects > All projects. The main form is titled 'PJJ_000359 : FEE JOURNAL' and 'Journal lines'. The 'Overview' tab is selected. The 'General' section contains a table with the following data:

Resource	Description	Sales currency	Sales price	Line property	Purpose	L...	Deferred reve...	Revenue period
000402 Adam Carter	FEE-1	USD	1,000.00	Billable	Development		<input checked="" type="checkbox"/>	6 Month

Deferred revenue fee – checkbox, which when marked converts the fee lines to deferment and the deferred revenue ID field becomes a mandatory to be filled in on the journal.

Revenue period – is a drop-down field which allows the user to select deferred revenue that is defined in the deferment schedule form. Based on the deferred revenue ID selected, the deferment schedule is created for this fee journal.

Deferment schedule transactions– This is available when the above two details are filled in. More details on the same is available in the next section.

Deferment Schedule Transactions

When the user opens the deferment schedule transactions, the below form opens where the distribution of the fee journal over the period and other details are displayed as per the periods defined as per selected deferred revenue ID.

The deferment schedule tab displays the details of the deferment as per the deferred revenue id, but specific to this transaction. On the Installments tab distribution of fee journal over a period of time is displayed.

Deferment schedule

SCHEDULE

Period for allocationMonths

Number of allocations

Deferred date10/4/2018

OK

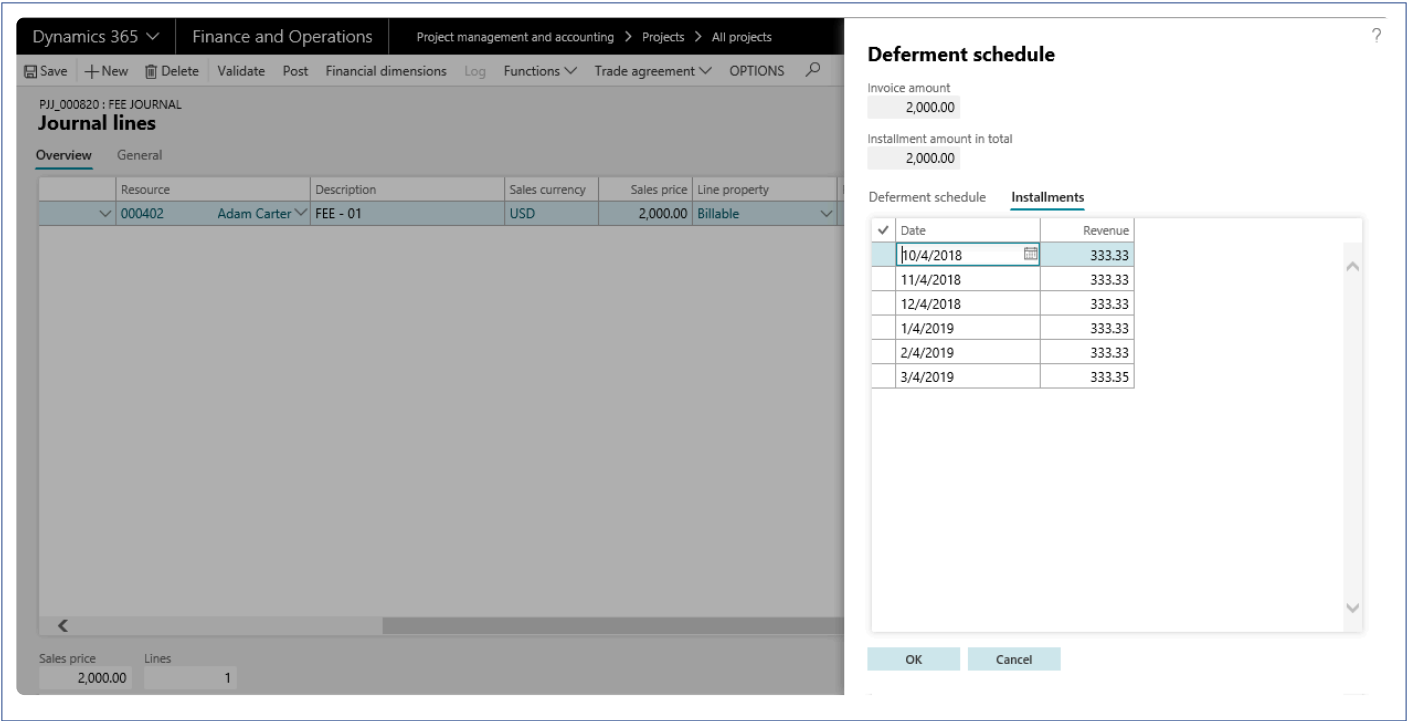

Cancel

Field	Description
Deferred amount	View the deferred amount from the journal.
Installment amount in total	View the aggregate installment amount.
Period of allocation	View the defaulted period from deferred revenue id that is attached on the journal line.
Number of allocation	View the number of allocation that's being setup in the Deferred revenue ID form and can be changed.
Deferred date	Defaults the date on the fee journal, but can be edited on this form.

Go to the *Installments* tab, to review the list of installments for deferrals.

Copyright © 2024 HSO | ProServ

Page 546 of 981

The fields and buttons on the Installments tab are as follows:

Field\Button	Description
Deferred amount	View the deferred amount from the journal.
Installment amount in total	View the aggregate installment amount. This amount should match the deferred amount, only then the OK button will be enabled.
Date	View the date on the instalment date will be the project date from the fee journal, which could be prior to the system date too. The rest of the instalments will be calculated considering this date and not the system date. This field can be edited.
Amount	View the amount of the installments calculated based on the period and number of allocation. This field can be edited.
OK	Click to save the changes and close the form. The OK button is disabled if the Deferred amount and Installment amount in total does not match.
Cancel	Click Cancel will throw a message which helps us get back the previous allocation if the installment amount does not match with the deferred amount.

The amount column is editable on this form. For the form to close by clicking OK, the Deferred amount and the Installment amount in total should match. If there is a difference, the OK button will be disabled.

So the user has to correct the mismatch or can re-set the installments to the original calculation by clicking on OK. Once the Fee journal is posted the deferments can be done using the periodic form of deferments.

Note – In the prior versions, deferment was possible only after invoicing the fee journal, but from Microsoft Dynamics 365 for Finance and Operations forward, deferment is available as soon as the fee journal is posted.

Revenue Posting

After posting the fee journal or after invoicing the fee journal, the user will be able to post the deferment transactions available under the periodic menu.

Go to *Project management and accounting > Periodic > projects360 periodic > Post revenue recognition schedule*.

Deferred date	Project ID	Project name	Invoice date	Invoice number	Curr...	Invoice amount	Revenue	Voucher	Transaction type	Revenue period
10/4/2018	00000131	ABP_04102018-DEF-1	10/4/2018	00000162	USD	1,200.00	200.00	0000012	Fee	6 Month
11/4/2018	00000131	ABP_04102018-DEF-1	10/4/2018	00000162	USD	1,200.00	200.00	0000013	Fee	6 Month
12/4/2018	00000131	ABP_04102018-DEF-1	10/4/2018	00000162	USD	1,200.00	200.00	0000014	Fee	6 Month
1/4/2019	00000131	ABP_04102018-DEF-1	10/4/2018	00000162	USD	1,200.00	200.00	0000015	Fee	6 Month
2/4/2019	00000131	ABP_04102018-DEF-1	10/4/2018	00000162	USD	1,200.00	200.00	0000016	Fee	6 Month
3/4/2019	00000131	ABP_04102018-DEF-1	10/4/2018	00000162	USD	1,200.00	200.00	0000017	Fee	6 Month

Details of the fields and buttons used on the above form are as follows:

Field\Button	Description
Update Financial dimensions	The dimensions from the original transaction are displayed here. The dimensions are editable, till the time first deferment is posted. If the dimensions are edited in the first deferment line, the same will be updated on the original fee journal and the remaining fee deferrals lines.
Change schedule date	This helps the user to change the deferred date of the selected transaction in the grid.
Post	This button opens batch processing form and if the user wants to post it immediately he can just click on ok. If not first mark the batch processing check box and then ok to post using batches. This helps the user to post the marked lines and these posted transactions can also be seen in the project posted transactions.
Balance	This opens the deferred revenue form that shows the details of the deferred invoice.
Voucher	Shows the vouchers posted when the Invoice was posted.

Transaction type	This field helps the user to filter based on the posting status of the deferment line.
Search	Click the button to filter the data shown in the grid once the necessary filters are selected.
Clear	Click to clear all filters and show all the data.
From date	This filter helps the user to filter based on the date of the deferment line.
To date	This filter helps the user to filter based on the date of the deferment line.
Revenue Period	This filter helps the user to filter based on the deferred revenue ID.
Project ID	This filter helps the user to filter based on the Project ID.
Deferred date	View the date for which the line will be posted.
Invoice date	View the date on which the invoice is posted.
Project ID	View the Project ID for which that line belongs to.
Project name	View the Project name for which that line belongs to.
Invoice	View the identification of the invoice.
Currency	View the currency used for the line.
Invoice amount	View the total Journal amount/deferred amount.
Revenue	View the deferment amount.
Voucher	Displays the voucher number for the posted lines.
Transaction type	View the origin of this line, which is fee.

When you open the Balance form the below information is available.

Deferred balance

Overview

✓	Project ID	Invoice	Opening balance	Revenue recognized	Closing balance
	00000131	00000162	1,200.00	1,200.00	0.00

Details of the fields available on the Deferred balance form are as follows.

Field	Description
-------	-------------

Project ID	Shows the project to which the deferment line belongs.
Invoice	Shows the invoice ID of the deferment line.
opening balance	The total revenue amount on the invoice
Revenue recognized	This field shows the aggregate amount of posted deferment lines.
Closing balance	The total amount of un-posted deferment lines

Once a deferment line is posted then the revenue recognized amount increases to that extent and closing balance reduces to that extent.

Post the deferment transactions and filter the form to show the posted transactions as shown in the screenshot below. The voucher button will be enabled when the records are filtered for posted transactions.

Overview

General

Journal number	Voucher	Date	Year clo...	Ledger account	Account name	Description	Currency	Amount in trans...	Amount	Amount in repo...	Posting type
002799	000000027	1/27/2018		250600-004-028-	Deferred Revenue		USD	100.00	100.00	100.00	Project - accrued revenue - sale...
002799	000000027	1/27/2018		420200-004-028--	Accrued Revenue		USD	-100.00	100.00	-100.00	Project - accrued revenue - sale...

When posting the deferment, the below entry is generated.

Accrued revenue – sales-value Dr (deferred revenue category)	\$100.00	
Accrued revenue – sales-value (posted revenue category)		\$100.00

Dimension Inheritance

The dimension inheritance feature is available for three different types of dimensions defaulting on the project transactions. They are:

At transaction level: where posting types are transactions such as hours, expenses etc.

At setup level: where posting type values are master data such as projects, project contracts, etc.

Custom dimensions defaulting onto inter-company transactions.

This feature has been developed to override dimensions at various points in D365 Operations and Finance. This modification allows the flexibility to interactively redefine how to override dimensions during the posting process as needed. The user can define the Project journals and transactions. The origin of dimensions should be either worker or project or a fixed dimension value, thus allowing maximum control of the data.

This feature is not dependent on parameter. However, the setup is key for this feature to work.

Configure Dimension Default Rule

✿ This section details the setups dimension default rules at different places to override dimensions.

Setup for Transaction Level Dimension Default

A new form has been designed for the user, to define the initialization process.

Go to *Project management and accounting > Setup > projects360 Setup > Dimension default rule*.

Posting type	Borrowing legal...	Relation	Project relation	Dimension name	Primary source	Alternate source	Fixed value
Hours		All		Project	Activity	Project	
Hours		All		ServiceLine	Worker	Project	
Hours		All		BusinessUnit	Project		
Hours		All		Department	Fixed		033
Hours		All		LegalEntity	Worker		
Hours		All		Projects			
Expenses		All		Project			
Expenses		All		ServiceLine			
Expenses		All		BusinessUnit			
Expenses		All		Department			
Expenses		All		LegalEntity			
Expenses		All		Projects			

Details of the fields and buttons on the form are as follows:

Field	Description
Posting type	<p>Select a posting type, based on the selection of the posting type the dimension name is displayed. The posting type is the type of transaction such as hour, expenses etc. When the Dimension rules are setup for hours, then same is applicable for:</p> <ol style="list-style-type: none"> 1. Timesheet lines. 2. Hour journals 3. Hour forecasts 4. Beginning balance journal lines of type Hour 5. Vendor invoices of type Hour 6. Adjustments of type Hour
Borrowing legal entity	User need to define borrowing legal entity to default dimension value for the intercompany transaction if lending legal entity does not have same account structure setup.

Relation	Table/Group/All relation specifying which type of filtering to be considered for the line.
Project Relation	The project group or project number to which the relation rule applies.
Dimension name	View the dimensions (e.g. cost center or expenses) that are being used by the transactions defined for the posting type. Each dimension needs to have a separate line for availing this feature.
Primary Source	In this field the user needs to define where the dimensions should default (e.g. worker or Project).
Alternate source	If the primary source does not exist for the record, or if the specified dimension value is blank, then the alternate source will be used.
Fixed value	If either the primary or alternate source is Fixed, then the value entered in this field will be used as the default dimension value.

Added the posting types to match Microsoft Dynamics 365 for Finance and Operations transaction types for ease of setup. Below are the posting types included under the different transaction types.

1. Hours

- Timesheet lines
- Hour journals
- Hour forecasts
- Beginning balance journal lines of type Hour
- Vendor invoices of type Hour
- Adjustments of type Hour

2. Expenses

- Expense report lines
- Expense (GL) journals
- Expense forecasts
- Beginning balance journal lines of type Expense
- Vendor invoices of type Expense
- Adjustments of type Expense

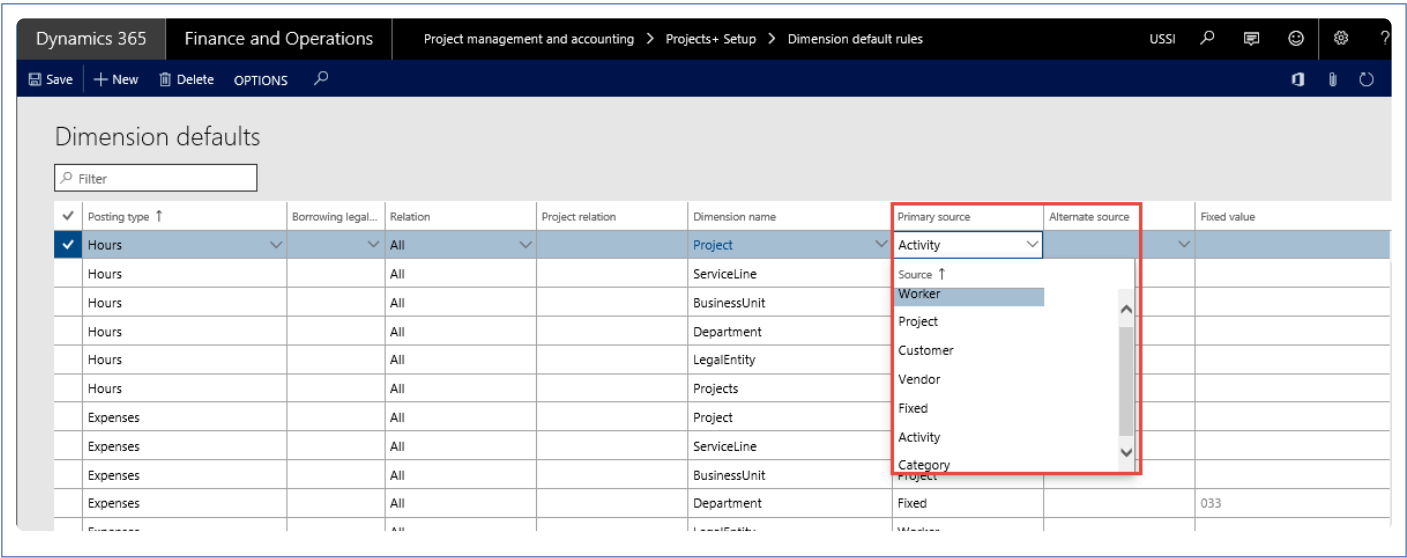

3. Items

- Item journals
- Item requirements (Project sales order lines)
- Item forecasts
- Beginning balance journal lines of type Item
- Vendor invoices of type Item
- Adjustments of type Item

4. Fees

- Fee journals
- Invoice fee entries
- Beginning balance journal lines of type Fee
- Adjustments of type Fee

Activity and category are also included as dimension sources, apart from Project, worker, customer, vendor and fixed, for the transaction types.

Setup for Dimension Defaulting on Setup Forms

There are a few setup forms for which the dimensions defaulting can be setup in the dimension setup form:

Project

- Project Creation.
Project and contract are included as dimension sources for the project posting types.

In a scenario when there is hour and payroll allocation document types in Dimension Default Rules and

both are supporting transactions of timesheet, hour, vendor invoice and adjustment types for hours. The Dimension Default Rules defined for Hour is what will be seen in the document. Payroll Dimension Default Rules ones will be behind the scenes rules – Standard Microsoft Dynamics 365 for Finance and Operations picks up worker dimensions during a timesheet posting.

Setup for Custom Dimension Defaulting

There are some dimension values which are legal entity specific such as Project dimension and such dimension values are not populated on Intercompany transactions as they are entity backed.

The only work around to the situation to track such dimensions is to create them as Custom dimensions. However, to add a custom dimension is to add the dimension value manually when the master record is added. For example, if the custom dimension is projects, then every time a new project is created then the same has to be updated in the dimension value table.

To make the manual creation of custom dimension value automatic this new feature has been added.

Go to Project management and accounting > Setup > projects360 parameters > Transactions > Dimension Inheritance.

The screenshot displays the 'projects360 parameters' configuration page. The left sidebar lists various setup areas: Invoicing, Work breakdown structure, Resourcing, Timesheets, Transactions (selected), Qualification, Billing schedule, and Unit billing. The main content area is titled 'Set up parameters for transactions' and includes several sections:

- SUBCONTRACTOR RECONCILIATION:** 'Activate subcontractor timesh...' is set to 'Yes'.
- PRICING ENHANCEMENT:** 'Activate pricing enhancements' is set to 'Yes'.
- REVENUE RECOGNITION SCHEDULE:** 'Activate revenue recognition s...' is set to 'Yes'.
- DIMENSION INHERITANCE:** 'Custom project dimension' is set to 'Projects' (highlighted with a green box).

Select the Project Dimension which is set up as a Custom dimension.

Upon selecting the custom project dimension, the project value will be populated as and when a project is created into the dimension value table for the selected custom dimension.

Defaulting Dimensions on Transactions

 This section details out the how and from where the dimensions default on the transactions. These defaulted dimensions can be modified at the transaction level.

Dimensions on Transactions

The primary source defined for the posting type against the dimension name will be the dimension that will default on that transaction.

Dynamics 365 ▾ Finance and Operations Project management and accounting > Projects+ Setup > Dimension default rules USS1 🔍 🗨️ 😊 ⚙️

Save + New Delete OPTIONS 🔍

Dimension defaults

🔍 Filter

✓	Posting type ↑	Borrowing legal...	Relation	Project relation	Dimension name	Primary source	Alternate source	Fixed value
	Hours		All		BusinessUnit	Worker		
	Hours ▾	▾	All ▾		Department ▾	▾	Project ▾	

For example – on the Hour transaction for the dimension name Business Unit, if the Primary source is defined as Worker, then the business unit defined on the worker will default on the hour journal.

When the primary source is blank and if there is an alternative source defined, then that would be considered for defaulting the dimension value on the hour journal.

Here below, Department “025” dimensions set for the projects “00000166”.

Note – On the standard adjustment form, DDR rule will be applied only if the “Dimension” parameter is ‘ON’ while performing the adjustment.

Workflow Modification

While using the participant option for workflow approvals, only a limited number of workers can be approvers such as project manager or project controller. In order to allow another employee who is not a project manager to approve documents, this feature has been added.

With the recent changes in this feature, an employee can be approver for their own documents. This validation has been removed considering a scenario where an employee does not have a person to approve their timesheet, probably due to their position.

This feature has been added to allow users to setup the approvers for timesheets, expenses and Purchase requisition documents at the worker level. This modification is more apt for organizations where there is only one level of approval. This feature is not controlled by any parameter.

With this change the user can define any active worker including himself from the current legal entity who can approve the below types of documents:

- Timesheet.*
- Expenses.*
- Purchase requisitions.*
- Personal time off.*

Any of the approvers would be able to approve any of these documents based on the setup in the workflow. In short, all these approvers would be available as participants in the workflows for these documents.

Configure and Use Approvers

* This section details the workflow enhancements provided as a part of projects360 functionality. This sections tells you how to configure approvers on the worker and those approvers are then configured in the workflow.

Assign Approvers on Workers

New fields are introduced on the Worker's form to setup the approvers for the worker. A new button has been added on the action pane, called Assign approvers.

Go to Human resources > Workers > Project tab > Assign approvers.

Go to Resourcing > Resource setup > Workers > Project tab > Assign approvers.

The screenshot shows the Dynamics 365 interface for 'Approver setup' for a worker named Aaron Con. The breadcrumb trail is 'Human resources > Workers > Workers'. The form has a 'Save' button and an 'OPTIONS' menu. The 'APPROVERS' section contains three dropdown menus: 'Timesheet approver', 'Expense approver', and 'Requisition approver'. All three dropdowns are currently set to 'Alice Ciccu'.

Note – The resource selected in the drop-down field should belong to the current legal entity, if you select a resource of any other legal entity the approver fields will be disabled.

New fields in the worker form under the Approver field group

1. Timesheet approver – The user setup in this field will be the approver of timesheets for the selected

worker.

2. Expenses approver – The user setup in this field will be the approver of expenses for the selected worker.
3. Requisition approver – The user setup in this field will be the approver of purchase requisitions for the selected worker.

Assign Approvers on Workflow

Process to add the new approvers on the workflow is as follows:

Go to Project management and accounting > Setup > Project management and accounting workflows.

Go to Timesheets > Setup > Timesheet workflows.

1. On the Action Pane, click New.
2. Select the Review timesheet workflow in the Select workflow type form.
3. Setup the workflow as it would be set up in standard.
4. In the Assignment type tab, select the assignment to be Participant as shown below.

Note – All the approvers are visible and are available to be setup as Participant even irrespective of the type (timesheet, expense, PTO or Purchase requisition).

Place holder on workflow

New place holder “Contract name” is introduced on the workflow which can be used in identifying the records during approval process.

Approvers on Transactions

Once the approvers are assigned on the workers form and workflow is configured for assignment type based on participant, below list of transactions will be assigned to appropriate users for approval.

- Timesheet.
- Expenses.
- Purchase requisition.
- Personal time off.

Workflow Administrator

A new feature, “Workflow administrator”, provides the ability to reassign or take actions on workflows stuck/pending due to various reasons. One of the reasons could be that the company has a high rate of turnover. When a user leaves the company, pending approvals are stuck with this user, so currently there is no elegant way to address these stuck workflows. With this feature situations like these can be handled smoothly.

Pending work items form allows users to perform actions like approve, reject and delegate provided required access is available to them. Also, the workflow can be reassigned to other approvers.

Manage Pending Workflows

This section explains how workflow administrators can review and take appropriate actions on the pending workflows.

Pending work items

A new form 'Pending work items', similar to the 'Work items assigned to me' is created for this feature, but will be more of a generic form where all the workflows from each and every module will be visible to the workflow admin.

A new security role 'Workflow Admin' is created to manage this functionality. A workflow admin role will be able to access to the new and able to take actions against the pending workflows. Pending work items form is available at following path:

System administration > Workflow > projects360 > Pending work items.

The fields available on this form are as follows:

Fields	Description
ID	Shows the cumulative information of the records which helps in tracking back to the details.
Document type	This field shows the workflow types.

Subject	This field shows the work item subject entered for the workflow.
Assigned to	Shows the user to whom the record currently assigned to.
Assigned to name	Shows name of the assigned to user.
Due date time	Shows Due date and time of the workflow.
Created date and time	Shows Created date and time of the workflow.
Submitted by	Shows user who submitted the record.
Submitter name	Shows name of the user who submitter the record.
Association	Show the legal entity associated with the selected record.

The buttons available on this form are as follows:

Buttons	Description
Open	Allows to open details of the selected record in the respective module. To open the records, the logged in user has should have sufficient access.
Reassign	You can reassign the selected records to another or concerned approvers.
Workflow	This button will be available only if the logged user is designated for any of the workflow action like approve, reject, delegate or recall.
Send reminder mail	You can send reminder mail to the submitter on the work item.

Global project Administration Workspace

A new tile called 'Pending work items' has been added on the global project administration workspace. This tile shows the count of work items in pending status. Clicking on the tile will open the Pending work items form and from there actions can be taken for the stuck workflows.

Connect your Power BI account for immediate access to your favorite reporting visualizations right here in Dynamics 365 for Finance and Operations.

Get started

WBS Modifications

The activity number on the WBS is a random number which is quite difficult to remember when using them on timesheets, etc. It would be good to have a value to be displayed along with the activity number text that would make more sense while entering transactions.

The activity code is the new field added per activity. This modification tracks the WBS ID, which is 1, 1.1, 1.2, the WBS position as well as the activity number which is a number like 5436212, 5685365, and the activity code. Activity code is a field which allows the users to enter any value manually and is now available on the WBS form.

This feature also includes the capability to merge a WBS structure from any project to the current project, not only the entire WBS, but part of the WBS too. There was no ability to quickly copy part of an existing WBS into the current WBS, which has been addressed with this feature.

Activate WBS Modifications

✿ This section details how to configure and use the work breakdown structure modifications.

Parameter Setup

This feature is parameter driven. The following setups are required for Work Breakdown Structure modifications feature to be activated and working. User needs to mark the 'Activate work breakdown structure' checkbox under the Work Breakdown Structure section to enable this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Transactions tab*

The screenshot displays the Dynamics 365 Finance and Operations interface. The top navigation bar shows 'Dynamics 365', 'Finance and Operations', and the breadcrumb 'Project management and accounting > Setup > Projects+ parameters'. Below the navigation bar, the 'Projects+ parameters' page is shown. On the left, a sidebar lists various parameters: Invoicing, Work breakdown structure (highlighted), Resourcing, Timesheets, Transactions, and Qualification. The main content area is titled 'Set up parameters for work breakdown structure'. It contains two sections: 'WBS FORECAST' and 'WORK BREAKDOWN STRUCTURE'. The 'WORK BREAKDOWN STRUCTURE' section is highlighted with a red box and contains the 'Activate work breakdown structure' toggle switch, which is currently set to 'Yes'.

WBS FORECAST	WORK BREAKDOWN STRUCTURE
Planned value Plan	Activate work breakdown structure Yes
Earned value Earned	
Estimate to complete ETC_WBS	

Modifications to WBS Form

 This section details the modifications done to Work Breakdown Structure form.

Activity Maintenance Menu

Added a new menu on the action pane called Activity maintenance – from where the activity maintenance form will open. The activities that are created on the Work Breakdown Structure form will be available on this new form.

The screenshot shows the Dynamics 365 interface for the 'Activity maintenance' menu. The breadcrumb trail is 'Dynamics 365 > Finance and Operations > Project management and accounting > Projects > All projects'. The 'Activity maintenance' menu item is highlighted in the top navigation bar. Below the navigation bar, the page title is 'Work breakdown structure' with the ID '00000152: 00000152-DDR' and the status 'Currently published'. The 'Schedule planning' tab is selected, showing a table of activities. The table has columns for WBS ID, S..., N..., Task, Predecessors, Category, Effort (hours), Start date, End date, Duration (days), Number of resourc..., Role, and Resource. The table contains two rows: one for 'Development' (WBS ID 1, Effort 100.00, Start date 7/24/2017, End date 8/9/2017, Duration 13.00) and one for 'TEST Support' (WBS ID 2, Effort 100.00, Start date 7/24/2017, End date 8/9/2017, Duration 13.00).

WBS ID	S...	N...	Task	Predecessors	Category	Effort (hours)	Start date	End date	Duration (days)	Number of resourc...	Role	Resource
1			Development		AppDev	100.00	7/24/2017	8/9/2017	13.00	1.00		
2			TEST Support		QA	100.00	7/24/2017	8/9/2017	13.00	1.00		

Activity Maintenance Form

Project Form

Activity maintenance form is a new form where the activities defined in the work breakdown structure form will be available after the user publishes the lines onto work breakdown structure. Activity maintenance is available as soon as the work breakdown structure is published for the very first time. Subsequently even when users edit the work breakdown structure form, the Activity maintenance form will be available for users to update the financial dimensions and activity code.

This form basically has two tabs and details of each tab are as follows:

00000152 : 00000152-DDR

Activity maintenance

Overview Financial dimensions

✓	WBS ID	Activity number	Activity code	Activity description	Invoice detail	Closed	Date and time closed
	1	W00003779	Dev_101	Development	<input type="checkbox"/>	<input type="checkbox"/>	
✓	2	W00003780	Test_101	TEST Support	<input type="checkbox"/>	<input type="checkbox"/>	

The overview tab has the below fields:

1. WBS ID- Auto generate and not editable by user.
2. Activity number – Same activity number as in WBS – not editable by user.
3. Activity code – Which will be the Manual activity code and will be editable.
4. Activity description field – Will be editable to the user.
5. Invoice detail – This checkbox will be editable, marking of this means that the activity roll up will not happen for this activity during Invoicing. This checkbox is in relation to the Invoice enhancements feature.
6. Closed – This checkbox when marked will default the system date in the date and time closed field.

Pricing Multiplier

Many customers price project work, expenses and other items on a mark-up over cost. In the Microsoft Dynamics 365 for Finance and Operations project module, the cost mark-up options are all based on a mark-up percentage. Most engineering companies express the mark-up as a “straight multiplier”. With this feature, we have converted the mark-up percentage to a multiplier format to better align with the industry in the rate tables and quoting.

A new sales model called multiplier has been introduced along with a master form for the multiplier definition. Users can choose multiplier type sales model on the hour and expense sales price tables. Based on the above setup, the sales prices on the transactions and invoices are retrieved.

Configure Pricing

✿ This section details the pricing enhancements available as a part of projects360 functionality. This section tell you how to configure and use the pricing multiplier functionality.

Parameter Setup

This feature is parameter driven. The following setups are required for Pricing multiplier feature to be activated and working. User needs to mark the 'Activate pricing enhancements' checkbox under the Pricing Enhancement section to enable this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Transactions tab.*

The screenshot displays the 'Projects+ parameters' configuration page in Dynamics 365. The breadcrumb trail at the top indicates the path: Dynamics 365 > Finance and Operations > Project management and accounting > Setup > Projects+ parameters. The left-hand navigation pane lists various setup categories: Invoicing, Work breakdown structure, Resourcing, Timesheets, Transactions (which is currently selected and highlighted in blue), and Qualification. The main content area is titled 'Set up parameters for transactions' and contains four distinct parameter groups. The 'PRICING ENHANCEMENT' group is specifically highlighted with a red rectangular box. Within this group, the 'Activate pricing enhancements' toggle switch is shown in the 'On' position. Other visible parameters include 'SUBCONTRACTOR RECONCILIATION' (with 'Activate subcontractor timesheet rec...' and 'Activate subcontractor expense recon...' toggles), 'DEFERRED REVENUE' (with 'Activate deferred revenue fee' toggle), and 'DIMENSION INHERITANCE' (with a 'Custom project dimension' dropdown menu set to 'Projects').

Modification to Sales Price Hour and Expense Forms

The below modifications have been made to the Sales price Hour and Sales price expense form.

1. Pricing multiplier column added to be just after the sales currency column, which is a four-decimal field.
2. When the user enters the multiplier value in the pricing multiplier column the sales price model will default to Charges percentage and will not be editable. The pricing column will default with the value from Pricing multiplier field multiplied by 100 and subtracted 100, this is to populate the value such that the pricing logic of charges percentage can be used for this pricing too.

So, for example if the pricing multiplier is 1.5635 then the pricing value would be = 56.35, which is $(1.5635 \times 100) - 100$. The same is shown in the screenshot below.

- When the user does not enter any value in the pricing multiplier field, then the sales price model and sales price is editable, and the user can define any other prices as allowed by standard Microsoft Dynamics 365 for Finance and Operations.

Sales price - hour

Valid for	Project ID	Project contract ID	Customer account	Price group	Sales currency	Pricing multiplier	Sales price model	Pricing
Table	00000006				USD	6.8957	Charges percentage	589.57
Table	00000006				USD	0.0000 Qty.		50.00
ussl	Table	00000092			USD	2,500.0000	Charges percentage	249,900.00
Table	00000092				USD	6.8959	Charges percentage	589.59
Table	00000092				USD	0.0000 Qty.		323.00
Table	00000180				USD	0.0000 Qty.		55.00
ussl	Table	00000180			USD	0.0000 Qty.		45.00
Table	00000182				USD	0.0000 Qty.		56.00
Table	00000216				USD	0.0000 Qty.		76.00

The rest of the calculation is the same as that of charges percentage on all the transactions, but the value is derived from the multiplier.

Automatic transactions

This new feature provides the ability to create project automatic transactions. Different rules can be setup to generate automatic transactions. Automatic project transactions will be created based on those defined rules either through manually or batch process.

Already created automatic transactions can be inquired from Posted automatic transactions new form. This feature will provide a more flexible alternative for current Microsoft indirect cost standard functionality.

Configure

 This sections details out the setups required to be configured for posting of Automatic transactions.

Parameter Setup

On projects360 parameter form, under Transactions tab, a new parameters under “Automatic transactions” has been introduced to control the creation of automatic transactions. User needs to set the ‘Activate automatic transactions’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 Parameters > Transactions tab.*

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate automatic transaction	When this parameter is set to Yes, automatic transactions can be posted for the project transactions based on the automatic rules.
Expense journal name	Select expense journal name that will be used to post automatic transactions.
Fee journal name	Select fee journal name that will be used to post automatic transactions.
Use original project date as	When this parameter is set to yes, automatic transaction will be posted using the original project date and user will not be given an option to select the posting date on automatic

posting date	transaction periodic dialog form.
Line property for reversal	This field is used to default the line property for the reversal transaction.

Rule ID number sequence

To generate the rule ID , number sequence has to be set up in the project management and accounting parameters form.

Go to Project management and accounting > Setup > Project management and accounting parameters.

The screenshot shows the 'Project management and accounting parameters' form. The left sidebar lists various categories: Forecast, Estimate, Hour utilization, Project statements, Cost control, Forecast reduction, Inventory dimensions, Production, and Project stage. The main area is titled 'Set up number sequence for Project documents' and contains a table with the following columns: Reference, Number sequence code, Sales tax boo..., Reuse numb..., and Use same number as. The 'Rule Id' row is highlighted with a green border.

Reference	Number sequence code	Sales tax boo...	Reuse numb...	Use same number as
Billing rule	Proj_312		<input type="checkbox"/>	
Timesheet voucher	Proj_300		<input type="checkbox"/>	
On-account invoice voucher	Proj_750		<input type="checkbox"/>	
On-account credit note voucher	Proj_775		<input type="checkbox"/>	
Resource request ID	Proj_656		<input type="checkbox"/>	
Integration journal	Proj_829		<input type="checkbox"/>	
Integration journal entries	Proj_855		<input type="checkbox"/>	
Deferred revenue reversal	Proj_310		<input type="checkbox"/>	
Agreement number	AGRMT		<input type="checkbox"/>	
Subcontractor accrual ID	ACRL		<input type="checkbox"/>	
Billing schedule Id	Proj_658		<input type="checkbox"/>	
Adjustment request Id	Proj_331		<input type="checkbox"/>	
Rule Id	Rule ID		<input type="checkbox"/>	

Automatic transaction rules form

New form is introduced to create automatic rules based on which the automatic transactions get posted for the project transactions. When the multiple rules are created then automatic transaction will get posted for all the rules for an original transaction. So one original transaction can have multiple automatic transactions based on the rules created.

Go to Project management and accounting > projects360 setups > Automatic transactions > Automatic transaction rules.

Go to Project management and accounting > All projects > Project tab > Automatic transaction rules.

Go to Project management and accounting > Project contracts > Project contract tab > Automatic transaction rules.

The screenshot displays the 'Automatic transaction rules' interface. At the top, there's a navigation bar with 'Finance and Operations' and 'Project management and accounting'. Below this, a breadcrumb trail shows 'projects360 Setup > Automatic transactions > Automatic transaction rules'. The main area is titled 'Automatic transaction rules' and contains a table of rules. The table has columns: Rule ID, Description, Start date, End date, Origin transaction type, Valid for category, Category re..., Valid for project, Project relation, Project contract ID, Resource, Active, and Intercompany. One rule, RI000088, is selected. Below the table, the 'Automatic transaction rule details' section is expanded, showing fields for 'AUTOMATIC TRANSACTION' (Expense), 'OFFSET LEDGER ACCOUNT' (110180), 'COST PRICE' (Multiplier from original, 2.90700), 'SALES PRICE' (Multiplier from original, 2.90700), and 'DESTINATION PROJECT' (Copy from original). The 'Currency' is set to USD.

Details of the fields available on the automatic transaction rules tab of Automatic transaction rules form are as follows –

Fields	Description
Filter	This field helps user to filter the records on the grid.
Active	This field helps user to filter all the records by record status.
Rule ID	Displays rule ID created through number sequence.
Description	This field can be used to define a description for the rule ID.
Start date	Define start date which is used in creating automatic transactions.
End date	Define end date which is used in creating automatic transactions.
Origin transaction type	Select original transaction type for which automatic transactions has to be posted.
Valid for category	Define if the rule is specific for category, category group or all.
Category relation	Select category or category group if the valid for category is other than all.
Valid for project	Define if the rule is specific for project, project group or all.
Project relation	Select project or project group if the valid for project is other than all.
Project contract ID	Defaults from project if project is selected or user can select the project contract.

Resource	Select resource.
Active	By default Active is set to yes. Only for the active rules, automatic transactions will get posted
Intercompany	<p>User can select the option to include or to skip the intercompany transactions. By default value is Include all transactions.</p> <ol style="list-style-type: none"> 1. Include all transactions – When this option is selected all the intercompany and non intercompany transactions are considered. 2. Exclude intercompany transactions – When this option is selected all the intercompany transactions are skipped. 3. Exclude non – intercompany transactions – When this option is selected all the non intercompany transactions are skipped. <p>This field will be editable only for the rules where original transaction type is hour.</p>

Details of the fields available on the automatic transaction rule details tab of Automatic transaction rules form are as follows –

Fields	Description
Automatic transaction type	Select the transaction type of the automatic transaction.
Automatic transaction category	Select the category with which the automatic transaction will get posted.
Currency	Defaults from the select project/project contract.
Offset ledger account	Define offset account to pick up for the automatic transaction. This field is editable only for automatic transaction type expense.
Apply default financial dimension	Select this parameter to default financial dimension on the offset ledger account.
Cost price model	This field is used to calculate the cost price while posting the automatic transaction.
Cost multiplier	This field is used to calculate the cost price as a multiplier from the original cost. User can enter up to 5 decimals in this field. This field is editable only for cost price model 'Multiplier from original'.
Cost price	Define cost price to be used while posting automatic transaction. This field is editable only for cost price model 'New price'
Sales price model	This field is used to calculate the sales price while posting the automatic transaction.

Sales multiplier	This field is used to calculate the sales price as a multiplier from the original sales. User can enter up to 5 decimals in this field. This field is editable only for sales price model 'Multiplier from original'.
Sales price	Define sales price to be used while posting automatic transaction. This field is editable only for sales price model 'New price'.
Destination project	This field is used to define if the automatic transaction should be posted for the same project as original transaction or to a different project. There are two options – Copy from original and Destination project.
Destination project ID	Define destination project ID to which the automatic transaction to be posted. This field is editable only if Destination project field is selected as 'Select destination project'.
Destination activity	This field is used to define the destination activity. This field is editable only if Destination project field is selected as 'Select destination project'.

Details of the buttons available on the Automatic transaction rules form are as follows –

Fields	Description
Automatic transaction posting	User can process the automatic transaction through which automatic transactions gets based posted based on the rule ID.
Posted automatic transaction	User can view posted automatic transactions for the rule ID.

Automatic transaction posting

This sections details out the how to post automatic transaction and view the posted automatic transactions.

Automatic transaction posting

New form is introduced to process automatic transactions for selected rule ID or for all the rule ID. The process will execute only active rules id and helps to create and post automatic transaction for the project transactions. In this process only the projects that are eligible for posting the transactions will be filtered and processed for automatic transaction. In this process if the original transaction is adjusted then the related automatic transaction status will get updated adjusted with cost and sales price as zero.

Note – When the user adjusts the original transaction then related automatic transactions also will get automatically adjusted.

Go to Project management and accounting > projects360 periodic > Automatic transactions > Automatic transaction posting.

Go to Automatic transaction rules form > Automatic transactions tab > Automatic transaction posting

Posted automatic transactions

New form is introduced to view the posted automatic transactions. Through this form user will be able to

view all the posted transactions for the rule ID. This form provides the details of both original and automatic transactions and can also view original and automatic transaction vouchers. When the automatic transactions are created, quantity is copied from the Original transaction even for Fee transaction.

Go to Project management and accounting Project management and accounting > Projects360 Inquiries and reports > Automatic transactions > Posted automatic transactions.

Go to Automatic transaction rules form > Automatic transactions tab > Posted automatic transactions

Details of the fields available on the Posted automatic transactions form are as follows –

Fields	Description
Filter	This field helps user to filter the records on the grid.
Start date	Select start date to filter the records on posted automatic transactions.
End date	Select end date to filter the records on posted automatic transactions.
Rule ID	Displays automatic transaction rule ID.
Project ID	Displays project ID of automatic transaction.
Project contract ID	Displays project contract ID of automatic transaction.
Original transaction type	Displays transaction type of original transaction whether Hour/Expense/Item/Fee.
Original transaction ID	Displays transaction number of original transaction.

Original transaction voucher	Displays voucher number of original transaction.
Automatic transaction type	Displays transaction type of the automatic transaction whether expense/Fee.
Automatic transaction ID	Displays transaction number of automatic transaction.
Automatic transaction voucher number	Displays voucher number of automatic transaction.
Project journal ID	Displays project journal number of the posted automatic transaction.
Project journal line	Displays project journal line number for the posted automatic transaction.
Posting date	Displays posting date of the automatic transaction.
Created by	Displays the user who processed the automatic transaction posting.
Reversed	This field identify the records which are reversed.
View original transaction	Displays transaction details of original transaction.
View original voucher	Display voucher entries of original transaction.
View automatic transaction	Displays transaction details of posted automatic transaction.
View automatic transaction voucher	Display voucher entries of automatic transaction posted.
Reverse	User can reverse the automatic transaction through this button.

Reversal of posted automatic transaction.

When the automatic transaction is posted by mistake, user has given an option to reverse the posted automatic transactions through reverse button. Once the transaction is reversed, adjustment entry will be posted with zero amount will be created with non chargeable line property picked from the “Line property for reversal” from the projects360 parameters.

Adjustments Automatic transaction.

When the original transaction is adjusted, automatic transactions will also get adjusted and the transaction with zero amount will be created with non chargeable line property picked from the “Line property id for write off” from the projects360 parameters.

Automatic transaction on invoice proposal.

When the original transaction and automatic transactions are added on the invoice proposal, for any reason if the original transaction is removed or adjusted then the automatic transaction will get automatically removed from the invoice proposal.

WIP aging report by project

The new “WIP aging by project” report will allow Project Managers and Project Accountants to get real time data about Work In Progress revenue balances by defined aging periods. This report will help in understanding how old the WIP is and take necessary actions to bill it to the client.

New report has been developed to display the WIP aging by project where the WIP balances will be displayed per project.

Setup and Run WIP Aging report

✿ This section details out the setups required to perform the WIP aging process and how the aging process is run for project transactions.

Parameter Setup

This feature is not controlled by a parameter. However, the aging periods has to be defined by which the WIP aging will be executed. Using this setup, a periodic report is generated that categorizes a company’s WIP revenue that has been outstanding.

Go to *Project billing > Setup > Aging period definitions*

Details of the fields available on the WIP aging periodic form are below.

Fields	Description
Aging as of	Select a date used on the current aging bucket.
Balance as of	Select a date to view the WIP balances for.
Aging definition period	Select aging definition period.
Criteria	There are 2 options. Transaction date – WIP aging report will be generated based on the transaction project date. Ledger date – WIP aging report will be generated based on the transaction ledger date.
Print aging period description	Select as 'Yes' if aging period description has to be printed on the WIP aging balance report.
Main project rollup	Set this parameter to 'Yes', to view the WIP balances rolled up main project.
Negative WIP auto settlement	Set this parameter to 'Yes', to allocate the negative WIP across periods with positive WIP for that project if any. Note: Important to set as 'Yes' for Progress fee type.
Exclude zero WIP balance	Set this parameter to 'Yes', to allocate the negative WIP across periods with positive WIP for that project if any.
Exclude finished projects	Set this parameter to 'Yes', to exclude the projects with finished status.

WIP aging report by project

This report displays project revenue WIP amounts per project. user can view project name, contract name, responsible person and the WIP amount per aging periods select while executing the report with Grand total amount.

Expense line level approval

Currently in Microsoft Dynamics 365 for Finance and Operations, there is no list page for expense line level approvals which makes it a time-consuming activity for approval of all lines from different expense reports.

This enhancement shows all the expense line level documents pending for approval in one list page to execute the workflow actions. Approvers can see a list of expense lines assigned to him\her in one view and take action. This feature is not a parameter driven.

Configure

✿ This section details the workflow required to be configured in order to use the line level expense approval feature.

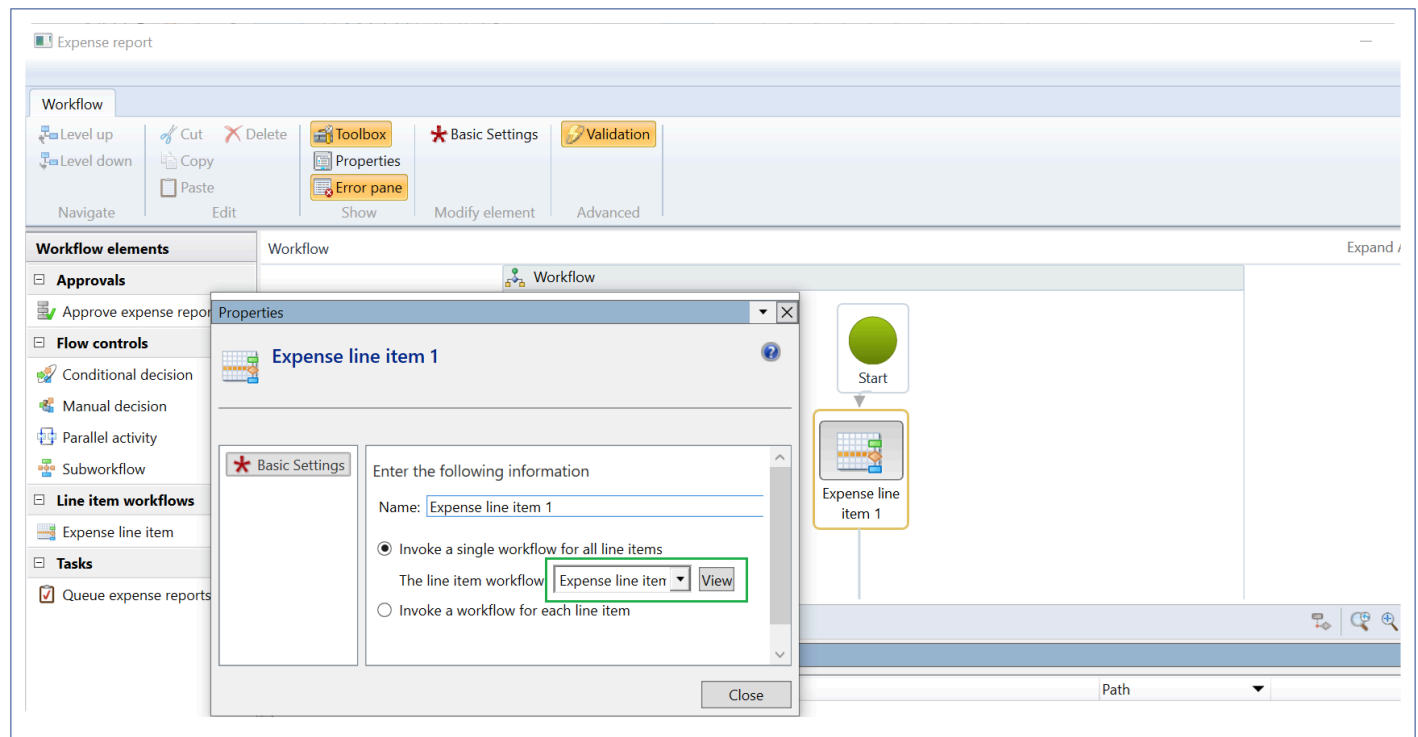

Workflow Setup

Create a line level expense workflow that has approvals done for each line and then create expense approval workflow. It then invokes the line level workflow from the expense workflow.

Go to *Expense management > Setup > Expense management workflows*

Invoke the above created expense line level workflow in Review expense workflow as shown below:

User can add Expense approver as a participant on the expense workflow. Once the expense approver is added on the workflow, expense reports will be assigned to the expense approver mentioned on the employees.

Parameter Setup

On projects360 parameter form, under Workflow line level approval tab, a new set of parameters under the “Expense line level approval” has been introduced to allow edit of few fields on Expense line level approval form. User needs to set the field value to ‘Yes’ in order to edit particular fields accordingly.

Go to Project management and accounting > Setups > projects360 parameters > Workflow line level approval tab

The screenshot shows the 'projects360 parameters' form. The left sidebar contains a list of navigation items: Unit billing, Communication, Manage subprojects, Pending work items, Contract management, Fee management, Quick project search, Vendor certifications by project, Workflow line level approval (selected), and Workspace configuration. The main content area is titled 'Setup for workflow line level approval' and contains a section for 'Expense line level approval'. Under this section, there is a heading 'ALLOW TO EDIT' followed by four toggle switches, all of which are currently set to 'Yes': Date, Expense amount, Line property, and Currency.

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Date	When this parameter is set to Yes, user can edit date on expense line details tab on Expense level approval form.
Expense amount	When this parameter is set to Yes, user can edit expense amount on expense line details tab on Expense level approval form.
Line property	When this parameter is set to Yes, user can edit line property on expense line details tab on Expense level approval form.
Currency	When this parameter is set to Yes, user can edit currency on expense line details tab on Expense level approval form.

Line level approval

 This section details how the line level expenses are approved.

Line Level Approval Form

Go to **Project and Management accounting > projects360 > Expensed line level approval**

Go to **Expense management > My expenses > Expense line level approval**

The screenshot shows the 'Expense line level approval' form. At the top, there's a navigation bar with 'Finance and Operations' and 'Expense management > My expenses > Expense line level approval'. Below this is a toolbar with 'Save', 'Approve', 'Reject', 'Delegate', and 'Options'. The main section is titled 'Expense line level approval' and contains a 'Summary of expenses' table. This table lists various expenses with columns for Customer name, Legal entity, Project ID, Project name, Parent Project, Total lines, Total amount, Principal, Project manager, and Project accountant. The 'Worthwhile Activity Store' entry is highlighted. Below the summary table is the 'Expense report lines' section, which includes a 'View expense' link and a table of transaction details. This table has columns for Transaction date, Resource name, Activity, Expense category, Merchant, Transaction amount, Currency, Line property, and Receipts attached. The first transaction is dated 4/25/2022 for 'Usha Ravindra Rao' with a 'Mileage' category. Below this is the 'Expense report line details' section, which includes 'Additional information' and 'Rejection instructions' fields.

Details of the buttons available are as follows –

Fields	Description
Approve	Expense approver can approve the expense.
Reject	Expense approver can reject the expense.
Delegate	Expense approver can delegate the expense.

Details of the fields available on Summary of expenses tab are as follows –

Fields	Description
Customer name	Displays the customer name of the expense. If Show for multiple funding source is marked on projects360 parameters timesheet tab and related project contract has multiple funding

	source, Customer name defined on the project will be displayed.
Legal entity	Displays the legal entity of the expense.
Project ID	Displays Project Id for which time is submitted.
Project name	Displays project name.
Parent project	Displays the parent project name of the Project.
Total lines	Displays the total lines for approval.
Total amount	Displays the total expense amount for approval.
Principal	Displays the principal responsible for the project.
Project manager	Displays the manager manager responsible for the project.
Project accountant	Displays the project accountant responsible for the project.

Details of the buttons available on Expense report lines tab are as follows –

Fields	Description
View expense	Expense approver can view the expense report details.
Chat with resource	Expense approver can chat with resource who has submitted the expense.

Details of the fields available on Expense report lines tab are as follows –

Fields	Description
Transaction date	Displays the transaction date of the expense. Date can be edited if 'Date' parameter under 'Allow to edit' is turned on.
Resource name	Displays the resource name of the expense.
Activity	Displays Activity name.
Expense category	Displays the category for which expense is submitted.
Merchant	Displays the merchant of the expense.
Transaction amount	Displays the transaction amount of the expense. Transaction amount can be edited if 'Expense amount' parameter under 'Allow to edit' is turned on.
Currency	Displays currency. Currency can be edited if 'Currency' parameter under 'Allow to edit' is

	turned on.
Line property	Displays the line property of the expense. Line property can be edited if 'Line property' parameter under 'Allow to edit' is turned on.
Receipts attached	Indicates if the receipts are attached on the expense.

Details of the fields available on Timesheet line details tab are as follows –

Fields	Description
Additional information	Displays additional information from expense line. This field is editable which gets updated on the expense lines.
Rejection instructions	Approver can update rejection instructions which gets updated on the expense lines.

1. All the lines that are assigned for approval for the current user is seen in this list page.
2. The lines shown are from all the legal entities displaying the total number of lines and total amount of expense.
3. Lines are grouped based on the project.

Standalone Unit entry code

This new feature allows users to enter “Unit codes” for specific project/sub-project for billing purposes directly through a newly developed form “Unit codes entry”. Based on the “Unit codes” and “Deliver now quantity” entered by the user on the form, the system automatically creates expense journals and/or fee journals for billing purposes. Users are provided with the option of either posting “Deliver now quantity” or all the “Remaining quantity”.

“Unit codes” can be configured to either use expense or fee categories. This feature is independently activated through “projects360 parameters”.

Configure

 This section details the setup required to be configured in order to use the Unit entry code feature.

Parameter setup

On projects360 parameter form, under Transactions tab, a new parameter “Activate unit codes entry” has been introduced to enter unit code without using timesheet. User needs to set the ‘Activate unit codes entry’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Transactions*

Invoicing Enhancements

Features of projects360 which are related to invoicing are grouped together in this document. The features explained in this segment are:

[Billing schedule](#)

[Adjustment request](#)

[Customer PO Matching](#)

[Invoice Document Review](#)

[Simple Adjustments](#)

[Invoice Grouping](#)

[Invoice Archives](#)

[Invoice Email](#)

[AR Aging](#)

Select a feature to view more details about them.

Billing schedule

Billing is one of the most crucial aspect of every business. If the invoices are not sent out on the timely basis, it can impact the business in negative way. To make the invoicing/billing process better, faster and smoother, we have introduced this feature.

This new functionality creates a billing schedules automatically through a configurable batch job on billing dues dates defined on the project contract. Project managers and projects accountants then can review the details on these billing schedules and get the invoices proposals created from the same form once the details are verified and confirmed.

This feature also provides a single page to review the status for each billing period, from here users can see if the invoices has already been created, if its pre-billing complete but invoice proposal not created or if it still pending for some reasons for a particular billing period. There are various indicators to quickly identify the billing periods needing attention.

Configure billing schedule

 This sections details out the setups required to configure in order to create Billing schedules.

Parameter Setup

On projects360 parameter form, under billing schedule tab, a new parameter “Activate billing schedule” has been introduced to control the Billing schedule feature. When this checkbox is turned on ‘Yes’, the Billing schedule feature is activated.

Go to *Project management and accounting > Setups > projects360 parameters > Billing schedule Tab.*

Page 617 of 981

Activate break down by main project	When this check box is turned on, Billing schedule will be created per main project. When the 'Activate billing schedule groups' parameter is marked, automatically 'Activate break down by main project' will get unmarked.
Default billing start date as blank	When this parameter is set to Yes, then "Billing period start" field will be defaulted as blank during billing schedule creation.
Activate service dates	When this parameter is set to Yes, then "Service date from" and "Service to date" fields will be displayed on the billing schedule and same dates will be used to default on invoice proposal..
Skip on-hold billing schedule lines	When this parameter is set to Yes, then billing schedule lines with pre-billing status "On-hold" will be skipped while creating invoice proposal.
Activate billing instructions	When this parameter is set to Yes, then billing instructions fields on Contract billing frequency will get activated.
View instructions in proposals	When this parameter is set to Yes, new button "View instructions" will get displayed on project invoice proposals and user will be able to view the instructions updated on the contract billing frequency.
Activate pre-billing review	When this parameter is set to Yes, new status called "Pre-billing reviewed" will be added to billing schedule status on billing schedule header level.
Activate pre-billing summary	When this parameter is set to Yes, then user will have an option to generate and review pre-billing transactions through a report.
Document type	Select the document type that will be used to generate pre-billing summary report.
Billing frequency	Select the frequency as Daily, Weekly, Bi weekly, Monthly or Billing calendar to create billing schedules based on set frequency.
Day of week	Select 'Day of the week' when billing frequency is selected as 'Weekly' to create billing schedule on set day.
Day of month	Set the 'Day of the month' when billing frequency is selected as 'Monthly' to create billing schedule on set day.
Billing calendar	Set 'Billing calendar' when billing frequency is selected as 'Billing calendar' to create billing schedule based on calendar setup.

Days for validation target date	Set value in this field to arrive at the pre-validation billing date for a billing schedule.
Days for posted target date	Set value in this field to arrive at the posted target date for a billing schedule.
Break down by billing schedule group	When this parameter is set to Yes, then “Break down by billing schedule group” field will be defaulted as during project contract creation. When ‘Break down by billing schedule by group’ parameter is marked, automatically ‘Break down by main project’ parameter will get unmarked.
Break down by main project	When this parameter is set to Yes, then “Break down by main project” field will be defaulted as during project contract creation. When ‘Break down by main project’ parameter is marked, automatically ‘Break down by billing schedule group’ parameter will get unmarked.

On projects360 parameter form, under simple adjustment tab, a new parameter “Activate simple adjustments” has been introduced to control the simple adjustment feature for billing schedules. When this checkbox is turned on ‘Yes’, the simple adjustments feature is activated on billing schedules.

Go to Project management and accounting > Setups > projects360 parameters > Simple adjustments Tab.

The screenshot shows the 'projects360 parameters' form with the 'Simple adjustments' tab selected. The 'BILLING SCHEDULE' section is highlighted with a green box. It contains the following fields:

- Activate simple adjustments:** A toggle switch set to 'Yes'.
- On-hold reason code:** A dropdown menu with 'OH' selected.
- On-hold action:** A dropdown menu with 'OH8' selected.

Other sections visible include 'SIMPLE ADJUSTMENTS FOR HOURS', 'SIMPLE ADJUSTMENTS FOR EXPENSES', and 'ADJUSTMENT REQUEST'.

Details of the fields available on this tab are as follows:

Field	Description
Activate simple adjustments	When this check box is turned on, simple adjustment feature gets activated on billing schedules.

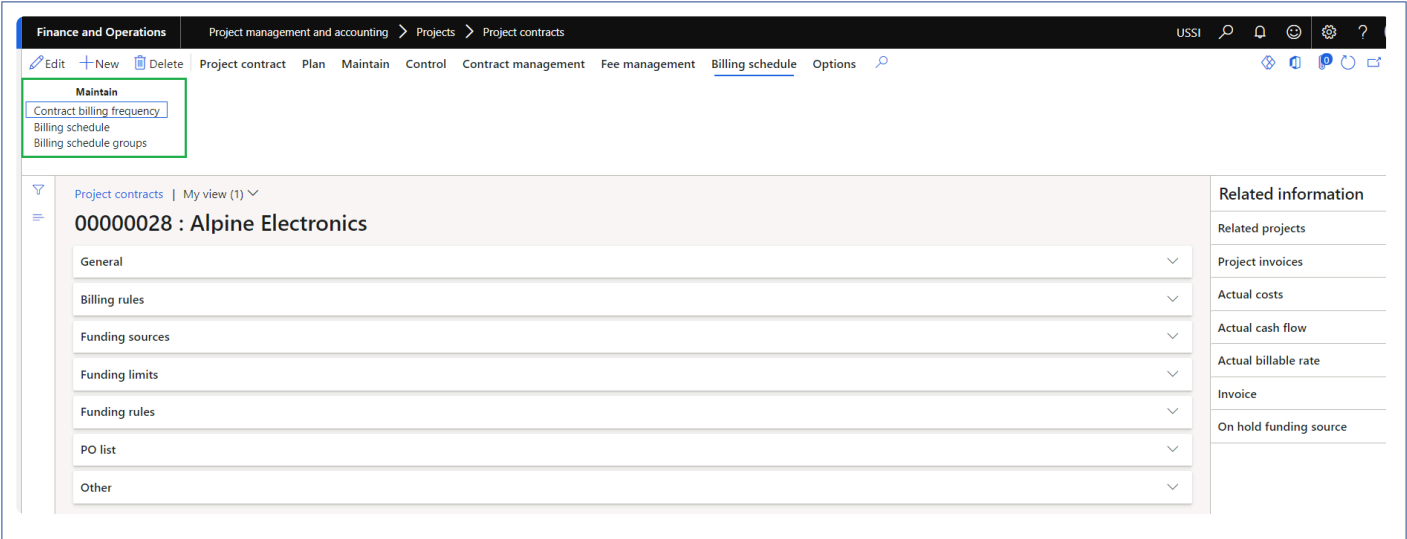

On-hold reason code	Select the reason code which will be used to create the adjustment request header when transactions is put on hold from simple adjustments form. This parameter will be active when 'Activate adjustment request', 'Activate simple adjustments' and 'Activate billing schedule' parameter is set to "Yes".
On-hold action	This will display "On-hold Billing" action type, which will show on the adjustment request lines. This parameter will be active when 'Activate adjustment request', 'Activate simple adjustments' and 'Activate billing schedule' parameter is set to "Yes".

Project contracts and Projects

On the projects contracts form, new button 'Contract billing frequency' is introduced on tab 'Billing schedule' to define the billing schedule parameter per project contract. Same button is placed on the projects form also.

Go to *Project management and accounting > Projects > Project Contracts > Billing schedule tab.*

Go to *Project management and accounting > Projects > Projects > Billing schedule tab.*

Details of the fields available on Contract billing frequency form are as follows:

Field	Description
Project contract ID	This field defaults with selected project contract ID.
Billing frequency	This field will default from the parameter and user will be allowed to edit the 'Billing frequency' to create billing schedules.
Day of week	This field will default from the parameter and user will be allowed to edit 'Day of the week' when billing frequency is selected as 'Weekly' to create billing schedule on set day.
Day of month	This field will default from the parameter and user will be allowed to edit 'Day of the month'

	when billing frequency is selected as 'Monthly' to create billing schedule on set day.
Billing calendar	This field will default from the parameter and user will be allowed to edit 'Billing calendar' when billing frequency is selected as billing calendar to create billing schedule based on calendar setup.
Days for validation target date	This field will default from the parameter and user will be allowed to edit value in this field to arrive at the pre-validation billing date for a billing schedule.
Days for validation target date	This field will default from the parameter and user will be allowed to edit value in this field to arrive at the posted target date for a billing schedule.
Break down by billing schedule group	When this parameter is set to 'Yes', billing schedule will be created for group of main project based on billing schedule groups setup. When the 'Break down by billing schedule group' parameter is marked, automatically 'Break down by main project' will get unmarked.
Break down by main project	When this parameter is set to 'Yes', billing schedule will be created for each main project. When the 'Break down by main project' parameter is marked, automatically 'Break down by billing schedule group' will get unmarked.
Billing instructions notes	User can update billing instructions notes for each contract. Billing instructions notes defined on the project contract can be viewed on the billing schedule and project invoice proposals.

Billing schedule groups

New form 'Billing schedule groups' is introduced allowing us to define different groups of projects that will be added to the same 'Billing schedule'. The user can select what main projects from the same contract will be invoiced together. The billing schedule will use these groups to separate the billing schedule records creation breaking down them by each group. After the main project is selected on the billing schedule group, same is not available for selection on the same group.

Billing schedule calendar

New form 'Billing schedule calendar' is introduced to create particular billing date based on which billing schedules will be created. Ex: If the user wants to bill his customer every first Monday of the month, then this can be setup through billing calendar.

Go to Project management and accounting > Setup > projects360 setup > Billing schedule > Billing schedule calendar.

The screenshot shows the 'Billing schedule calendar' form. The sidebar on the left has a filter section with two items: 'FirstMondayEveryMnth' (First monday of every month) and 'FirstFridayEveryMth' (First Friday of Every Month). The main form area has a 'Calendar' field with the value 'FirstMonday...' and a 'Description' field with the value 'First monday of every month'. Below these fields is a 'Calendar days' section with a table. The table has columns for 'Date', 'Day of week', 'Month', and 'Year'. The data rows show dates from 4/6/2020 to 12/7/2020, all of which are Mondays.

Date	Day of week	Month	Year
4/6/2020	Monday	April	2020
5/4/2020	Monday	May	2020
6/1/2020	Monday	June	2020
7/6/2020	Monday	July	2020
8/3/2020	Monday	August	2020
9/7/2020	Monday	September	2020
10/5/2020	Monday	October	2020
11/2/2020	Monday	November	2020
12/7/2020	Monday	December	2020

Details of the fields available on this form are as follows:

Field	Description
Calendar	Set the calendar name.
Description	Set the calendar description.
Date	Set the date for the to create billing schedule.
Day of week	This field will default based on the set date.
Month	This field will default based on the set month.
Year	This field will default based on the set year.

Billing schedule number sequence

To generate the billing schedule, number sequence has to be set up in the project management and accounting parameters form.

Go to Project management and accounting > Setup > Project management and accounting parameters.

Billing schedule ID

Create billing schedule

This sections details out the how to create billing schedule and view various details on billing schedule form.

Billing schedule form

New form is introduced to create billing schedule based on the frequency and maintain the billing schedules for a project contract. This form helps to review the status for each billing period whether its pre-billing complete or not, invoice proposal is created or not or if it still pending for some reasons for a particular billing period. Users can review the details on these billing schedules and get the invoices proposals created from the same form once the details are verified and confirmed.

This form provides the details of all the transactions posted for each billing schedule and provides information on all the invoices posted for this particular contract and can also perform adjustments.

Go to *Project management and accounting > projects360 > Billing schedule > All billing schedule.*

Go to *Project management and accounting > projects360 > Billing schedule > My billing schedule.*

Go to *Project management and accounting > projects360 > Billing schedule > Billing schedule by approver.*

Go to *Project management and accounting > Projects > Project contracts > Billing schedule tab > Billing schedule button.*

Go to *Project management and accounting > Projects > All projects > Billing schedule tab > Billing schedule button.*

Note – My billing schedule form and lines will displays where the logged in user is Principle, Project manager, Project accountant for a project.

Note – Billing schedule form will display where the logged in user is assigned as billing approver for a project contract.

Details of the buttons available on this form are as follows:

Field	Description
Billing schedule	User can create new billing schedules for a project contract. Billing schedule will get created based on the billing frequency set on the project contract. Ex: If Weekly is set as billing frequency and Day of week is set as Wednesday, then user will be able to create billing schedule every Wednesday.
Pre-billing summary	Pre-billing summary process creates pre-billing summary review report for the given date range and selected parameters.
Invoice proposal	User can create invoice proposal for a single or multiple billing schedule which is in pre-billing complete status. Once the invoice proposal is created thereafter standard process to be followed to post the invoice.
Billing schedule status	User can select the billing schedule status as Pending, On hold, Pre-billing reviewed and Pre-billing complete for a billing schedule when each of the process gets completed.
Adjustment requests	User will be able to generate adjustment request for a billing schedule.
Pre-billing summary review	User will be able to view the generated pre-billing summary report for a billing schedule.
Simple adjustments	User will be able to perform adjustments for the transactions.
Project invoices	User will be able to view the posted project invoice for a billing schedule.
Project invoice proposals	User will be able to view the project invoice proposal for a billing schedule.
View instructions	User will be able to view billing instructions defined on the Contract billing frequency.
Posted project transactions	User will be able to view the posted transactions for a billing schedule.
Pending	User will be able to view the pending project invoice for a billing schedule.

project transactions	
----------------------	--

Details of the filter options available on this form are as follows:

Field	Description
Filter	User can filter the billing schedules records based on the available fields.
Status	User can filter the billing schedules based on various status like All, Pending, On hold, Pre-billing complete. When the status filter is other than All, billing schedule status button will be enabled and allowed to select multiple billing schedule to update the status.
Indicator	User can filter the billing schedule based on various Indicator like All, Billing cycle finished, Pre-billing is due, Billing is due.

Details of the fields available on this form are as follows:

Field	Description
Billing schedule ID	Displays billing schedule ID created through number sequence.
Project contract ID	Displays project contract ID for the billing schedule.
Contract name	Displays contract name.
Billing schedule group	Displays billing schedule group if the billing schedule is created with billing schedule group.
Main project ID	Displays main project ID for the billing schedule. Main project ID will display only when billing schedule is created when 'Break down main project" parameter is marked on project contract.
Main project name	Displays main project name.
Billing period start	Displays start date of the billing schedule. When the billing period is created for first time, this field will be blank and for subsequent records it will take Billing period end+1 day.
Billing period	Displays end date of the billing schedule. This is calculated based on the frequency set on the project contract. Ex: If Weekly is set as billing frequency and Day of week is set as Wednesday, the

end	the billing period end date will be every Wednesday that is 5th, 12th, 19th, 26th of august 2020.
Service date from	Displays billing period start date. This field is controlled through a parameter and is editable.
Service date to	Displays billing period end date. This field is controlled through a parameter and is editable.
Billing frequency	Defaults the billing frequency used for creating billing schedule.
Billing calendar	Defaults the billing frequency used for creating billing schedule.
Pre billing validation target date	Displays the validation date to complete pre-billing. This is arrived by adding the value set in 'Days for validation target date' to the billing period end date.
Posted target date	Displays the validation date to complete billing. This is arrived by adding the value set in 'Days for posted target date' to the billing period end date
Status	Displays the status of billing schedule whether it is Pending, On hold, Pre billing complete, Invoice proposal created, Invoice posted for a billing schedule. When the invoice proposal is created/posted from the billing schedule automatically status gets changed to Invoice proposal created/Invoice posted.
Indicator	Displays the indicator which helps to take necessary on the billing schedule. When 'Pre-billing validation target date' crosses current date then the indicator will be 'Pre-billing is due' and when 'Posted target date' crosses current date then the indicator will be 'Billing is due' and when the invoice gets posted the Indicator will be 'Billing cycle finished'.
Billing approver	Displays the billing approver of the project contract. User can filter the records based on billing approver
Modified by	Displays the person name who modified the billing schedule.
Modified date and time	Displays the modified date and time of the billing schedule.

Details of the fact boxes available on this form are as follows:

Field	Description
Project invoice proposals	Displays all the project invoice proposals for a billing schedule.

Project invoices	Displays all the projects invoices for the project contract.
------------------	--

Billing schedule details form

In the billing schedule details form, all the project related details will be created based on conditions. Projects with fee type 'Time and expense' and 'None' will be created even without contract value and for projects with fee type 'Time and expense NTE', 'Fixed fee', 'Progress' will be created only when contract value is approved. User able to view the various indicators which describes if they are no posted transactions or no completed milestones or if progress percentage is not updated for the billing period. There is an option provided to the user to view the details such as Contract value, Progress percentage, Milestones etc.

Go to Project management and accounting > projects360 > Billing schedule > All billing schedule > Select Billing schedule ID.

Go to Project management and accounting > projects360 > Billing schedule > My billing schedule > Select Billing schedule ID.

Pending project transactions	User will be able to view the pending project invoice for a billing schedule.

Details of the fields available on General tab are as follows:

Field	Description
Billing schedule	Displays billing schedule ID created through number sequence.

ID	
Project contract ID	Displays project contract ID for the billing schedule.
Contract name	Displays contract name.
Billing schedule group	Displays billing schedule group.
Main project ID	Displays main project ID for the billing schedule.
Main project name	Displays main project name.
Billing period start	Displays start date of the billing schedule. This field is made editable to include any type of corrected transaction with the question message to the user to proceed with changes.
Billing period end	Displays end date of the billing schedule. This field is made editable to include any type of corrected transaction with the question message to the user to proceed with changes.
Service date from	Displays billing period start date. This field is controlled through a parameter and is editable.
Service date to	Displays billing period end date. This field is controlled through a parameter and is editable.
Billing frequency	Defaults the billing frequency used for creating billing schedule.
Status	Displays the status of billing schedule.
Pre billing validation target date	Displays the validation date to complete pre-billing.
Posted target date	Displays the validation date to complete billing.
Proposed invoice date	Select proposed invoice date for the invoice proposal.
Billing approver	Displays the billing approver of the project contract.
Modified by	Displays the person name who modified the billing schedule.
Modified date and time	Displays the modified date and time of the billing schedule.

Details of the buttons available on Billing schedule lines tab are as follows:

Field	Description
-------	-------------

Fee management	Opens Fee management form for the selected project.
ETC/EAC management	Opens ETC/EAC management form for the selected project.
Pending posted transactions	Displays all the pending transactions.
Transaction details	Displays all the Hour and Expense transactions for the select project.
% Progress history	Displays % progress history form and will be enabled only for projects with Fee type progress.
Update pre-billing status	User can change the pre-billing status for single or multiple lines.
Revenue adjustment	User can generate revenue adjustments for the project.

Details of the fields available on Billing schedule lines tab are as follows:

Field	Description
Project ID	Displays project ID included in the billing schedule.
Project name	Displays project name.
Fee type	Displays fee type of the project.
Pre-billing status	Select pre-billing status as Pending, On hold or Complete for a project.
Principal	Displays responsible principal for the project.
Project manager	Displays responsible project manager for the project.
Project accountant	Displays responsible project accountant for the project.
Indicator	Displays the indicator for the project. For fixed fee type of project, if the milestone is not completed for a billing period then the indicator will be displayed as 'There are no milestones completed'. For progress type of project, if the progress % is not updated for a billing period then the indicator will be displayed as '% progress is not updated. For Time and expense or Time and expense NTE, if there are pending transactions for a billing period then indicator will be displayed as 'There are pending transactions. If the projects are displayed with Header project parameter marked on projects the the indicator will be displayed as "Header". In case if all the criteria is completed for a billing period then there will not be any indicator displayed.

Contract value	Displays the contract value of the project.
% Progress	User can update % Progress for the projects with fee type 'Progress'.
WIP	Displays the WIP amount of the project.
Invoiced	Displays the Invoiced amount of the project.
Modified by	Displays the person name who modified the project.
Modified date and time	Displays the modified date and time for the project.

Based on the type of the project selected on the Billing schedule lines tab, fields will be displayed accordingly.
Ex: For Fixed fee type of project milestone details and for progress % of progress will be displayed.

The screenshot displays the 'Billing schedule' interface in the projects360 application. The top navigation bar shows the path: Finance and Operations > Project management and accounting > projects360 > Billing schedule > All billing schedules. The main content area is titled 'Billing schedule | My view' and shows a specific schedule line 'BS00000394 : 00002178'. Below this, there is a table of 'Billing schedule lines' with columns: Project ID, Project name, Fee type, Pre-billing status, Principal, Project manager, Project accountant, Indicator, Contract value, % Progress, WIP, Invoiced, Modified by, and Modified date and time. The table lists four lines, with the last one (00000605.30) selected. Below the table, the 'Line details' section is expanded, showing 'General' information and 'FEE MANAGEMENT' details. The 'FEE MANAGEMENT' section includes fields for Contract value (75,000.00), WIP (83,300.00), Invoiced (100,100.00), Remaining revenue (-108,400.00), % Revenue completed (244.53), and Estimated % complete (100.00).

Invoice footer text	User can add text in this field. This value will get defaulted on the invoice proposal Invoice footer text field.

Details of the fact boxes available on this form are as follows:

Field	Description
Project invoice proposals	Displays all the project invoice proposals for a billing schedule.
Project invoices	Displays all the projects invoices for the selected project.
Project totals	Displays the details of Contract value, Contract hours, WIP, Invoiced, Revenue, Actual hours, Revenue % completed, Estimated % complete and Remaining revenue on the main project for a billing schedule.

Pre-billing summary

New button is introduced to generate pre-billing summary where a report will be created showing a summary of % progress and transactions for all the projects in the structure from “Billing schedule” form. This report will be available for the review where users will be able to highlight, makes notes, corrections or any edits.

The screenshot shows the 'Pre-billing summary' form in the HSO | ProServ interface. The form is titled 'Pre-billing summary' and is part of the 'Billing schedule' section. It includes a 'Parameters' section with 'BILLING PERIOD' (From date: 1/1/2022, To date: 1/25/2022), 'INCLUDE TRANSACTION TYPES' (Hour transactions, Expense transactions, Fee transactions, Item transactions, all set to Yes), 'DATA' (Show progress summary, set to Yes), 'Records to include', and 'Run in the background'. The main table shows 'Billing schedule lines' with columns for Project ID, Project name, Fee type, Pre-billing status, Principal, and Project manager. The table contains several rows of data, including Project ID 00001671 and 00001674.

Details of the fields available on this form are as follows:

Fields	Description
From date	User can define the From date to include the project posted transactions.
To date	User can define the To date to include the project posted transactions.
Hour transactions	User can select this option to include hour transactions.
Expense transactions	User can select this option to include expense transactions.
Fee transactions	User can select this option to include fee transactions.
Item transactions	User can select this option to include item transactions.
Show summary progress	When this parameter is turned on, 'Progress summary' section will be printed on the report.
OK	On clicking OK, pre-billing summary report will get generated and tiff file will get attached.

Cancel

On clicking Cancel the process will get cancelled.

Pre-billing summary review

New form is introduced to maintain all the “Pre-billing summary” versions generated. Once the pre-billing summary is generated, a tiff file will be opened for user to review where users will be able to highlight, makes notes, corrections or any edits using toolbar. This report displays the progress summary section provides an insight of progress of each subprojects and transaction summary section provides an insight of all the posted transactions which includes chargeable and non-chargeable transactions for each subprojects with fee type.

‘Comments’ functionality is added for the users to put in their thoughts and if any clarifications required. Comments can be added on each attachment and history of it will be maintained.

Apart from above capabilities, user can open the tiff attachment and related billing schedule.

The screenshot displays the 'Pre-billing summary review' interface. The sidebar on the left lists documents with timestamps and titles like 'PrebilSummary'. The main area shows a report for 'Pre-billing summary review for billing schedule: BS00002056'. The report includes a toolbar with icons for editing and viewing. The report content is divided into sections: 'Billing schedule Id', 'Contract number', 'Contract name', 'Legal entity', 'From date', 'To date', 'Progress summary', 'Phase/Task', 'Fee type', 'Contract value', '% Progress', '% Complete', 'Earned', 'Previous billing', 'Current billing', 'Transactions summary', and 'Expense'. The right-hand panel shows a list of comments from users like 'Usha Ravindra Rao' and 'Narasannavar Appasaheb'.

Details of the fields available on this report header are as follows:

Field	Description
Company logo	Displays company logo.
Billing schedule Id	Displays billing schedule Id from selected billing schedule.
Contract number	Displays contract number related with billing schedule.
Contract name	Displays contract name related with contract number.
Legal entity	Displays legal entity related with billing schedule.

From date	Displays from date from process parameters.
To date	Displays to date from process parameters.

Details of the fields available under Progress summary section are as follows:

Field	Description
Phase/ Task	Displays subproject name.
Fee type	Displays fee type of the subproject.
Contract value	Displays contract value of the subproject.
Progress	Displays “ progress” if the project type is Progress or displays value where Earned value is divided by Contract value and multiplied by 100.%
Complete	Displays “Estimated % complete” from fee management If “ETC/EAC management” is active or displays “ revenue completed” from fee management form.%
Earned	Displays value by multiplying Contract value * % Progress if the project type is Progress or displays value by adding Previous billing and Current billing
Previous billing	Displays value from “Invoiced” field from Fee management form related with selected subproject.
Current billing	Displays value by deducting Previous billing value from Earned value if the project type is Progress or displays sum of sales amount for all the chargeable transactions

Details of the fields available under Transactions summary section for Hour transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Role	Display role from the related transaction.
Resource name	Display resource name from the related transaction.
Category	Displays category from the related transaction,
Hours	Displays hours quantity from the related transaction.
Sales price	Displays sales price from the related transaction.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Details of the fields available under Transactions summary section for Expense transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Resource name	Display resource name from the related transaction.
Category	Displays category from the related transaction,
Qty	Displays hours quantity from the related transaction.
Sales price	Displays sales price from the related transaction.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Details of the fields available under Transactions summary section for Fee transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Category	Displays category from the related transaction,
Transaction text	Displays transaction text from the related transaction.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Details of the fields available under Transactions summary section for Item transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Category	Displays category from the related transaction,
Transaction text	Displays transaction text from the related transaction.
Qty	Displays quantity from the related transactions.
Sales prices	Displays sales price from the related transactions.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Simple adjustments

New form has been introduced to perform simple adjustment directly from the Billing schedule form. This form will display posted Hour/Expense transactions of all the projects available on 'billing schedule lines' from the selected 'billing schedule'. User can view projects/subprojects in a tree structure and select a node to get the respective transactions.

Users can perform simple adjustments on selected Hour transaction such as "modify time", "write off time – transactions", "write off time – percent", "modify work location", "reapply sales price". Users can also be able to perform simple adjustments on selected Expense transaction such as "modify expenses", "write off expense".

User will be able to put the transactions 'On-hold' and 'Release transactions' for billing. When the transactions are put on hold, adjustment request gets automatically created based on the parameter setup.

User will be able to filter the transaction based on the Invoice status. If 'All' option is selected both chargeable and non-chargeable transactions will be displayed.

This form comprises of two sections:

Left hand section – In this section all projects and subprojects will be listed from the billing schedule lines.

Right hand section – In this section transactions are displayed based on the selected project. If the parent project is selected, then all the transactions including subprojects are displayed.

Go to Project management and accounting > projects360 > Billing schedule > All billing schedule > Process > Simple adjustments

Periodic process

✿ *This section details out the how to create billing schedule and invoice proposal through periodic process.*

Billing schedule creation

Billing schedule creation periodic process helps in creating billing schedule for a selected project contract or for all projects contracts. This process can be executed in batch as well.

Below conditions has to be met in order to create billing schedule:

- Project contract should be active.
- Project contract apart from billing frequency None and End of projects.
- Calculated period end date should be equal to 'Process date + Days in advance'.
- There should not be any existing billing schedule for the same date range for the project contract.

Below conditions has to be met in order to create billing schedule lines:

- Project stage should allow the invoice proposal creation.
- If the 'Contract management' parameter is active, project must have approved contract value.

Go to Project management and accounting > projects360 periodic > Billing schedule > Billing schedule creation.

Go to Project management and accounting > Projects > Project contracts > Billing schedule tab > Billing schedule button.

Go to Project management and accounting > Projects > All projects > Billing schedule tab > Billing schedule button.

Process date	This field defaults with current date and user is allowed to select the preferred date.
Allow to duplicate billing period	When this parameter is set to Yes, user will be allowed to create billing schedule with the same date for which already billing schedule is created.
Auto-create 'Pre-billing summary'	When this parameter is set to Yes, Pre-billing summary report will get generated along with the billing schedule.
OK button	Click OK button to create billing schedules.
Cancel button	Click Cancel button to cancel the creation process.

Invoice proposal creation

Invoice proposal creation periodic process helps in creating project invoice proposals for a selected billing schedule ID or for all billing schedules where the status is pre-billing complete. The process can be executed in batch as well.

While creating invoice proposal if there are any project with pre-billing status as “on-hold” on the billing schedule lines, such projects will not be considered for the invoice proposal. This is controlled through a parameter “Skip on-hold billing lines”.

On the billing schedule if there is any adjustment request created, billing schedule ID will get updated on the adjustment request and if the user updates the action type as “On-hold billing” such transactions will not be considered for the invoice proposal.

Go to Project management and accounting > projects360 periodic > Billing schedule > Invoice proposal creation.

Go to Project management and accounting > Projects > Project contracts > Billing schedule tab > Billing schedule button > Invoice proposal button .

Go to Project management and accounting > Projects > All projects > Billing schedule tab > Billing schedule button > Invoice proposal.

Details of the fields and buttons available on this form are as follows:

Field	Description
Billing schedule ID	User can select the Billing schedule ID for which invoice proposal has to be created.
OK button	Click OK button to create invoice proposals.
Cancel button	Click Cancel button to cancel the creation process.

Once the Invoice proposal is created through manual process or through periodic process from the billing schedule, new button “Pre-billing summary review” will be available for the users to view the “Pre-billing summary” which is already generated for that “Billing schedule”.

Pre-billing summary review” button will not be available if the invoice proposal is created through other than Billing schedule form.

The screenshot shows the 'Pre-billing summary review' button highlighted in a green box within the top navigation bar of the 'Invoice proposals' form. The form is titled 'PJIP_00017138 : 00014103' and displays various fields organized into sections: GENERAL, CONTRACT, FUNDING SOURCE, PRINTING OPTIONS, PO DETAILS, and SERVICE DATES. The 'Pre-billing summary review' button is located in the top right area of the form, next to other navigation options like 'Invoice document review' and 'Chat with billing approver'.

Pre-billing Summary

 This sections details out the setups required to configure and process Pre-billing summary.

Parameter Setup

On projects360 parameter form, under billing schedule tab, a new parameter “Activate pre-billing summary” has been introduced to control the pre-billing summary functionality. When this checkbox is turned on ‘Yes’, the Pre-billing summary feature is activated.

Go to *Project management and accounting > Setups > projects360 parameters > Billing schedule Tab.*

Pre-billing summary

New button is introduced to generate pre-billing summary where a report will be created showing a summary of % progress and transactions for all the projects in the structure from “Billing schedule” form. This report will be available for the review where users will be able to highlight, makes notes, corrections or any edits.

The screenshot shows the 'Pre-billing summary' form. The left sidebar has tabs for 'New', 'Process', 'Bill', and 'Related information'. The 'Process' tab is active, showing 'Billing schedule status', 'Pre-billing summary review', and 'Simple adjustments'. The main content area displays a 'Billing schedule' section with a 'Standard view' dropdown and a table of billing schedules. The right sidebar contains the 'Pre-billing summary' parameters, including 'BILLING PERIOD' (From date, To date), 'INCLUDE TRANSACTION TYPES' (Hour, Expense, Fee, Item, On-account transactions), 'DATA' (Show progress summary, Show timesheet comments), 'Records to include', 'Run in the background', 'Batch processing', and 'Task description'. The 'Task description' field is set to 'Pre-billing summary'.

Details of the fields available on this form are as follows:

Fields	Description
From date	User can define the From date to include the project posted transactions.
To date	User can define the To date to include the project posted transactions.
Hour transactions	User can select this option to include hour transactions.
Expense transactions	User can select this option to include expense transactions.
Fee transactions	User can select this option to include fee transactions.
Item transactions	User can select this option to include item transactions.
On-account transactions	User can select this option to include on-account transactions.
Show summary progress	When this parameter is turned on, 'Progress summary' section will be printed on the report.

Show timesheet comments	When this parameter is turned on, timesheet internal and external comments will get displayed for each hour transaction.
OK	On clicking OK, pre-billing summary report will get generated and tiff file will get attached.
Cancel	On clicking Cancel the process will get cancelled.

Pre-billing summary review

New form is introduced to maintain all the “Pre-billing summary” versions generated. Once the pre-billing summary is generated, a tiff file will be opened for user to review where users will be able to highlight, makes notes, corrections or any edits using toolbar. This report displays the progress summary section provides an insight of progress of each subprojects and transaction summary section provides an insight of all the posted transactions which includes chargeable and non-chargeable transactions for each subprojects with fee type.

‘Comments’ functionality is added for the users to put in their thoughts and if any clarifications required. Comments can be added on each attachment and history of it will be maintained.

Apart from above capabilities, user can open the tiff attachment and related billing schedule.

Details of the fields available on this report header are as follows:

Field	Description
Company logo	Displays company logo.
Billing schedule Id	Displays billing schedule Id from selected billing schedule.
Contract number	Displays contract number related with billing schedule.
Contract name	Displays contract name related with contract number.
Legal entity	Displays legal entity related with billing schedule.
From date	Displays from date from process parameters.
To date	Displays to date from process parameters.

Details of the fields available under Progress summary section are as follows:

Field	Description
Phase/ Task	Displays subproject name.
Fee type	Displays fee type of the subproject.
Contract value	Displays contract value of the subproject.
Progress	Displays “ progress” if the project type is Progress or displays value where Earned value is divided by Contract value and multiplied by 100.%
Complete	Displays “Estimated % complete” from fee management If “ETC/EAC management” is active or displays “ revenue completed” from fee management form.%
Earned	Displays value by multiplying Contract value * % Progress if the project type is Progress or displays value by adding Previous billing and Current billing
Previous billing	Displays value from “Invoiced” field from Fee management form related with selected subproject.
Current billing	Displays value by deducting Previous billing value from Earned value if the project type is Progress or displays sum of sales amount for all the chargeable transactions

Details of the fields available under Transactions summary section for Hour transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Role	Display role from the related transaction.

Resource name	Display resource name from the related transaction.
Category	Displays category from the related transaction,
Hours	Displays hours quantity from the related transaction.
Sales price	Displays sales price from the related transaction.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Note – When the Show timesheet comments parameter is marked while generating the report, Internal comments and External comments will get displayed for the timesheet transactions.

Details of the fields available under Transactions summary section for Expense transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Resource name	Display resource name from the related transaction.
Category	Displays category from the related transaction,
Qty	Displays hours quantity from the related transaction.
Sales price	Displays sales price from the related transaction.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Details of the fields available under Transactions summary section for Fee transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Category	Displays category from the related transaction,
Transaction text	Displays transaction text from the related transaction.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Details of the fields available under Transactions summary section for Item transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Category	Displays category from the related transaction,
Transaction text	Displays transaction text from the related transaction.
Qty	Displays quantity from the related transactions.
Sales prices	Displays sales price from the related transactions.
Sales amount	Displays sales amount of the related transaction.
Status	Displays chargeable status of the related transaction.

Details of the fields available under Transactions summary section for On account transactions are as follows:

Field	Description
Date	Display the project date from transaction.
Description	Displays description from the related transaction,
Transaction origin	Displays transaction origin from the related transaction.
Sales price	Displays sales price from the related transactions.
Status	Displays chargeable status of the related transaction.

Progress billing phases

✿ This sections details out the setups required to configure and process Progress billing phases.

Progress billing phases functionality in Billing schedule enables users to perform progress billing based on a new configurable structure for invoicing purposes. Users can define different phases and % of the contract value to be billed in each phase at the project contract level.

Parameter Setup

On projects360 parameter form, under billing schedule tab, a new parameter “Activate progress billing phases” has been introduced to control the progress billing phases functionality. When this checkbox can be turned on to ‘Yes’ only when “Activate billing schedule” checkbox is turned on.

Go to *Project management and accounting > Setups > projects360 parameters > Billing schedule Tab.*

The screenshot displays the 'projects360 parameters' setup page for the 'Billing schedule' tab. The page is organized into several sections with various configuration options:

- Activate billing schedule:** A toggle switch set to 'Yes'.
- INVOICE PROPOSAL:** Includes 'Skip on-hold billing schedule lines' (Yes) and 'BILLING INSTRUCTIONS' (Yes).
- PRE-BILLING REVIEW:** Includes 'Activate pre-billing review' (Yes), 'Activate pre-billing summary' (Yes), 'Document type' (PrebilSummary), 'Activate Apryse markup tool (Pre...)' (Yes), 'Apryse web server URL' (https://apyse.hsoproserve.com), and 'Apryse license key' (*****).
- APRYSE MARKUP TOOLBAR:** Includes 'Enable annotate toolbar' (Yes), 'Enable shapes toolbar' (Yes), 'Enable edit toolbar' (Yes), 'Enable insert toolbar' (Yes), 'Enable redact toolbar' (Yes), 'Enable measurement toolbar' (Yes), 'Enable fill and sign toolbar' (Yes), and 'Enable forms toolbar' (Yes).
- BILLING FREQUENCY:** Includes 'Billing frequency' (Billing calendar), 'Day of week' (Monday), 'Day of month' (9), 'Billing calendar' (10th Day), 'Days for validation target date' (2), 'Days for posted target date' (3), 'Break down by billing schedule g...' (No), and 'Break down by main project' (Yes).
- PROGRESS BILLING PHASES:** A section highlighted with a green box, containing 'Activate progress billing phases' (Yes).

Details of the fields available for this feature are as follows:

Field	Description
Activate progress billing phases	When this parameter is set to Yes, then user will have an option to configure progress billing phases.

Adjustment requests

This feature has been developed to allow projects managers to request any type of adjustments to project accountants on posted hours and expense transactions. This new functionality allows project managers to review all the transactions through an excel format which allows to define what actions to be taken and any comments for each transaction. This excel format can be viewed by the project accountant and perform adjustment accordingly and update the status of the adjustment request.

Configure

 This sections details out the setups required to be configured for Adjustment request.

Parameter Setup

On projects360 parameter form, under Simple adjustment tab, a new parameters under “Adjustment request” has been introduced to control the creation of adjustment request. User needs to set the ‘Activate adjustment request’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 Parameters > Simple adjustment tab.*

The screenshot shows the 'projects360 parameters' form in the 'Simple adjustments' tab. The left sidebar lists various setup categories: Invoicing, Simple adjustments (selected), Work breakdown structure, Resourcing, Timesheets, Transactions, Qualification, Billing schedule, and Unit billing. The main content area is titled 'Set up parameters for simple adjustments' and is divided into two columns: 'SIMPLE ADJUSTMENTS FOR HOURS' and 'SIMPLE ADJUSTMENTS FOR EXPENSES'. The 'ADJUSTMENT REQUEST' section is highlighted with a green box. It contains three fields: 'Activate adjustment request' (set to Yes), 'Require reason code' (set to Yes), and 'Submission is not required' (set to Yes). Other fields in the 'SIMPLE ADJUSTMENTS FOR HOURS' column include 'Activate modify time' (Yes), 'Activate write off time - transa...' (Yes), 'Line property id for write off' (Demo-NB), 'Activate write off time - percent' (Yes), 'Activate write off time - quantity' (Yes), 'Activate Write up / write down' (Yes), and 'Write up / write down view' (By resource).

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate adjustment request	When this parameter is set to Yes, user can create adjustment request through adjustment request form.
Require reason code	When this parameter is set to Yes, it becomes mandatory to to select reason code while creating adjustment requests.
Submission is not required	When this parameter is set to Yes, user can process adjustment request without the submission process through adjustment request form.

Adjustment request reason codes form

New form is introduced to create adjustment request reason codes to use later during the creation of adjustment requests.

Go to *Project management and accounting > projects360 setups > Adjustment request > Adjustment request reason codes*.

Generate adjustment request

This section details out the how to generate adjustment request and view various details on Adjustment request form.

Adjustment request form

New form is introduced to view all the created adjustment request for a project. This form helps to generate adjustment request and view the status of the same. This form provides the details of all the generated requests for each project and can define the adjustment action to be taken on each transaction and can also provide any comments by the project manager.

Go to Project management and accounting > projects360 > Adjustment requests > All adjustment requests.

Go to Project management and accounting > projects360 > Adjustment requests > My Adjustment requests .

Go to Project management and accounting > projects360 > Billing schedule > All Billing schedule > Adjustments request.

Go to Project management and accounting > projects360 > Billing schedule > My Billing schedule > Adjustments request .

Go to Project management and accounting > Projects > All projects > Fee management tab > Adjustments request.

Go to Project management and accounting > Projects > All projects > Fee management form > Adjustments request .

Note – When the adjustment request is opened from the projects, all records related with main project and subprojects will be displayed.

Details of the buttons available on the Adjustment requests form are as follows –

Fields	Description
Update status	User can update the status as Created, Submitted, In process, Completed or Cancelled status for the adjustment record. User will be able to select the multiple adjustment request with the same status and can update the status for multiple records. By default status is displayed from the selected record.
Regenerate request	User can regenerate adjustment request through this button.

Details of the fields available on Adjustment requests tab of Adjustment request form are as follows –

Fields	Description
Status	User can filter the adjustment records based on the status.
Request	Displays the attachment generated through generate request process.
Request ID	Displays auto generated number sequence for Adjustment request.
Project ID	Displays the project Id for which the adjustment request is created.
Project name	Displays the project name for which the adjustment request is created.
Reason code	User can select the reason code for the adjustment request.
Description	Displays the description of the reason code and is editable.
Status	Displays the status of the adjustment request.

Requested by	Displays the user name who requested the adjustment.
Project manager	Displays the project manager of the project.
Project accountant	Displays the project accountant of the project.
Principal	Displays the principal of the project.

Details of the fields available on the Details tab of Adjustment requests form are as follows –

Fields	Description
Project ID	Displays the project Id for which the adjustment request is created.
Project name	Displays the project name for which the adjustment request is created.
Reason code	User can select the reason code for the adjustment request.
Description	Displays the description of the reason code and is editable.
Status	Displays the status of the adjustment request.
Note	User can enter notes for the adjustment request.
Project manager	Displays the project manager of the project.
Project accountant	Displays the project accountant of the project.
Principal	Displays the principal of the project.
Requested by	Displays the user name who requested the adjustment.
Requested date and time	Displays the requested date and time of the adjustment request.
Updated by	Displays the user name who updated the adjustment request.
Updated date and time	Displays the updated date and time of the adjustment request.

New and Regenerate request button

New button is introduced to create and generate adjustment request for a project at a same time. This form helps to generate adjustment request with different filter options. “Regenerate request” button is introduced to regenerate the adjustment request if required.

Go to Project management and accounting > projects360 > Adjustment requests > All adjustment requests.

Go to Project management and accounting > projects360 > Adjustment requests > My Adjustment requests .

Go to Project management and accounting > projects360 > Billing schedule > All Billing schedule > Adjustments request.

Go to Project management and accounting > projects360 > Billing schedule > My Billing schedule > Adjustments request .

Go to Project management and accounting > Projects > All projects > Fee management tab > Adjustments request.

Go to Project management and accounting > Projects > All projects > Fee management form > Adjustments request .

Adjustment request details form.

When the clicks on the “Request ID” it opens the adjustment request details form where user can update the actions and comments required on each transaction and submit the adjustment request.

The screenshot displays the 'Adjustment request details form' within the 'projects360' application. The breadcrumb trail at the top indicates the path: Finance and Operations > Project management and accounting > projects360 > Adjustment requests > All adjustment requests. The form is divided into several sections:

- Related information:** Includes 'Posted transactions'.
- Standard view:** A dropdown menu set to 'Standard view'.
- Adjustment requests:** The main section containing:
 - General:** Fields for Request Id (00000449), Status (Submitted), Requested by (UshaR), Main project name (ETC/EAC 7), and dates (From date: 4/1/2021, To date: 4/30/2021). It also includes toggle switches for Hour transactions, Expense transactions, Fee transactions, and Item transactions, all currently set to 'No'.
 - Project invoice status:** Set to 'All'.
 - Date stamp:** 5/10/2021.
 - Adjustment request lines:** A table with columns: Project date, Project ID, Parent name, Name, Category, Resource..., Quantity, Sales price, Sales amo..., Description, Line property, Invoice status, Action, Comment, Transaction type, and Adjusted. It contains five rows of transaction data.
- Related information (right sidebar):** Includes 'Timesheet comments' and 'Internal comment'.

The 'Adjustment request lines' table data is as follows:

Project date	Project ID	Parent name	Name	Category	Resource...	Quantity	Sales price	Sales amo...	Description	Line property	Invoice status	Action	Comment	Transaction type	Adjusted
4/14/2021	00001207	ETC/EAC 7	PM			2.00	400.00	800.00		Billable	Chargeable	Modify time		Hour	<input type="checkbox"/>

4/21/2021	00001207	ETC/EAC 7	ERPDev	Usha Ra...	3.00	350.00	1,050.00		Billable	Chargeable	On hold			Hour	
4/21/2021	00001207	ETC/EAC 7	Meals		1.00	110.00	110.00		Billable	Chargeable	Modify expense			Expense	

Details of the buttons available on the adjustment request form are as follows –

Fields	Description
Update status	User can update the status as Created, Submitted, In process, Completed or Cancelled status for the adjustment record.
Generate request	User can generate adjustment request through this button.
Posted transactions	Displays posted transactions for the adjustment request date range along with subprojects.

Details of the fields available on the General tab are as follows –

Fields	Description
Request ID	Displays the request Id of the adjustment request.
Main project name	Displays the main project name for which the adjustment request is created.
Requested by	Displays the user name who requested the adjustment.
Status	Displays the status of the adjustment request.
From date	Displays From date of the adjustment transaction.
To date	Displays From date of the adjustment transaction.
Hour transactions	Displays parameter selected while generating adjustment request.
Expense transaction	Displays parameter selected while generating adjustment request.
Project invoice status	Displays transaction status selected while generating adjustment request.
Date stamp	Displays the date when the adjustment request was created.

Details of the buttons available on the Adjustment request lines tab are as follows –

Fields	Description
Remove	User can remove the transactions.
Update action	User can update “Action” field for single or multiple transactions.

Details of the fields available on the Adjustment request lines tab are as follows –

Fields	Description
Project date	Displays the project date of the transaction.
Project ID	Displays the project ID of the project.
Parent name	Displays the parent project name of the child project.
Name	Displays the project name of the project.
Category	Displays the category of the transaction.
Resource name	Displays the resource name of the transaction.
Quantity	Displays the quantity of the transaction.
Sales price	Displays the sales price of the transaction.
Sales amount	Displays the sales amount of the transaction.
Description	Displays the description of the transaction.
Line property	Displays the line property of the transaction.
Invoice status	Displays the Invoice status of the transaction.
Action	User can update the action to be performed on the each transaction.
Comments	User can update the comments if any on the each transaction.
Adjusted	This field will be automatically marked when the adjustment is performed for a transaction.

Details of the fact box available on the Adjustment request are as follows –

Fields	Description
Internal comments	Displays internal comment from the timesheet for the select transaction.
External comments	Displays external comment from the timesheet for the select transaction.

Once the user submits the adjustment request, option is provided to perform adjustment actions through the simple adjustment buttons. New field “Action type” is added on the Adjustment request lines tab where the user can select required action to be performed. By default action type will be “All”. Based on the action type selected simple adjustment buttons get displayed. Ex: If Modify time action type is selected then “Modify time” button is displayed. If the user updates the action type to ‘On hold’ or ‘on hold billing’, these transactions will be included in the next adjustment request process.

When the adjustment request process is run again, all the transactions within the given date range will be included even if those transactions are already part of the other adjustment request process which is in ‘Completed’ or ‘Cancelled’ status.

Details of the buttons available on the adjustment request form when the adjustment request is submitted are as follows –

Fields	Description
Modify time	User can modify time to other activity, Category or Project. Also user can partially move time to another project, activity or category for hour transactions.
Write off time-transaction	User can write off time to non-chargeable for hour transactions.
Write off time-percent	User can write off percentage of time to non-chargeable for hour transactions.
Modify expense	User can modify time to other activity, Category or Project for expense transactions.
Write off expense-transaction	User can write off time to non-chargeable for expense transactions.
Re-apply sales price	User can reapply the sales price on the hour transactions and expense transactions. When sales price is reapplied 'Sales currency' and 'Sales price' only will be by default as 'Yes' while performing the sales price adjustment.

Request attachment.

When the user opens the attachment generated through adjustment request, user can update the actions and comments required on each transaction.

Details of the fields available on the attachment are as follows –

Fields	Description
Request ID	Displays the request Id of the adjustment request.
Main project name	Displays the main project name for which the adjustment request is created.
Requested by	Displays the user name who requested the adjustment.
Date stamp	Displays the date when the adjustment request was created.
Line number	Displays the line number of the transactions.
Project date	Displays the project date of the transaction.
Project ID	Displays the project ID of the project.
Parent name	Displays the parent project name of the child project.
Name	Displays the project name of the project.
Category	Displays the category of the transaction.
Resource name	Displays the resource name of the transaction.
Quantity	Displays the quantity of the transaction.
Sales price	Displays the sales price of the transaction.
Sales amount	Displays the sales amount of the transaction.
Description	Displays the description of the transaction.
Line property	Displays the line property of the transaction.
Invoice status	Displays the Invoice status of the transaction.
Action	User can update the action to be performed on the each transaction.
Comments	User can update the comments if any on the each transaction.

Customer PO Matching

This feature has been developed to track and match the invoices with the Customer's Purchase order (PO). This feature allows the user to add Customer PO at the project contract level, at the funding source level. This feature tracks the usage of a PO and shows the remaining PO balance after invoices are paid.

Configure PO Matching

 This sections details out the setups required to configure for the Customer Purchase Order matching.

Parameter Setup

On projects360 parameter form, under Invoicing tab, a new parameter “Customer PO Matching” has been introduced to control the customer PO matching feature. When the user makes the value of this checkbox as ‘Yes’, the customer PO Matching is activated.

Go to *Project management and accounting > Setups > projects360 Parameters > Invoicing Tab.*

The screenshot shows the 'projects360 parameters' form in the 'Invoicing' tab. The 'CUSTOMER PO MATCHING' section is highlighted with a green box. It contains the following settings:

- Activate customer PO matching:** Yes
- Invoice amount to exclude tax:** Yes

Field	Description
Activate customer PO matching	Set this field to Yes, to activate the feature.
Invoice amount to exclude tax	Set this field to Yes, to exclude the tax amount from the Invoice amount and update ‘Amount remaining’ and ‘Amount invoiced’ the PO list.

Creating Customer PO

Customer PO can be created in the PO List Fast Tab that has been added newly for this feature in the Project contract form. The user can add as many Customer PO lines as required per funding source. However, per

funding source only one PO can be set as default, for the PO to default onto the invoice. Once there is an approved Invoice proposal attached to a Customer PO line, then the Customer PO record cannot be deleted.

Go to Project management and accounting > Projects > Project Contracts > PO List.

Go to Project billing > All invoices > Project Contracts > PO List.

The screenshot displays the 'PO list' tab within the 'Project contracts' section. The table below represents the data shown in the application.

	Date	Funding source ID	Customer PO	Amount	External description	PO internal description	Closed	Default	Amount remaining	Amount invoiced
<input checked="" type="checkbox"/>	7/1/2021	Global Sportin...	CP29408	100,000.00	PO invoicing	PO customer invoicing	<input type="checkbox"/>	<input type="checkbox"/>	100,000.00	0.00

Details of the fields available on this tab are as follows:

Field	Description
Date	The user can update the Customer PO date in this field.
Funding source ID	Identification of the funding source.
Customer PO	This is an alpha numeric field, where the user can enter the Customer PO references that will be used on the invoice proposal and invoice.
Amount	The total amount of the Customer PO is entered in this field.
External description	This is a description field where in the user can enter details which are received from the customer.
PO Internal description	This is also a description field where the user can enter notes/description internal to the organization such as project details, cost centers, etc.
Closed	Selecting this check box will eliminate the usage of the related PO in the invoice proposal form and can be used only after the check box is cleared.
Default	Selecting this check box will make the PO reference default in the invoice proposal form Customer PO field. At any point in time only one line can be marked as a default Customer PO.

Amount remaining	The amount remaining to be invoiced out of the total amount is shown in this field (i.e. Amount – Amount invoiced).
Amount Invoiced	The total of all invoices posted with the Customer reference relating to the line is shown in this field. If the 'Invoice amount to exclude tax' is marked then total invoice amount excluding taxes will be displayed.

Matching PO on Invoices

This section deals with how the customer PO's are matched with the invoices and the PO details are printed on the reports.

Customer PO Reference on Invoice Proposal

The user will have to create an invoice proposal using the Invoice proposal form.

The default Customer PO details will be updated automatically in the customer PO field if Project contract contains PO line. The user can change the customer PO reference at the invoice proposal level.

Go to Project management and accounting > Projects Invoices > Projects Invoice Proposals.

Go to Project billing > All invoices > Invoice proposals.

Update PO number on posted invoices

The user can update the PO number on the posted invoices. Update PO number button is provided to update the PO numbers on the posted invoices. The lookup displays all the PO numbers available from the invoice funding sources.

Go to *Project management and accounting > Projects Invoices > Project invoices*.

The screenshot shows the Microsoft Dynamics 365 interface for 'Project invoices'. The 'Update PO number' dialog box is open, allowing the user to update the PO number for a selected invoice. The dialog box has a 'PO number' dropdown menu with 'CP29408' selected and an 'OK' button. The background shows the 'Project invoices' list with columns for Invoice, Date, Invoice account, Name, Legal entity, Project contract, Sales currency, Invoice amount, Due date, Sent electronic, Invoice status, Email sent date, and PO number. The 'PO number' column is highlighted in green for the selected invoice.

When the user updates the PO number on the posted invoices, 'Amount invoiced' and 'Amount remaining' fields on the PO list will get updated on the project contract

Invoice document review

As an approver you want some corrections on the invoice proposal but not sure on how to pass this information to the user visually? projects360 brings in a new feature to address this need. This feature provides the ability to write electronic notes on Invoice proposals as part of the Invoice workflow. TIF attachments are automagically saved when the Invoice proposal is submitted or resubmitted to workflow.

The version history of proposal notes is saved and available for future reference. Default file name for the “PJIP_00000XXX-YYYY-MM-DD – Timing -.tif”. We have added a parameter under projects360 parameters to control this functionality.

Configure Invoice Review

 This sections details out the setups required to be configured for marking up invoices.

Parameter Setup

Invoice document review setup

On projects360 parameter form, under Invoicing tab, a new parameter “Invoice document review” has been introduced to control the reviewing of the invoices. User needs to set the ‘activate invoice document review’ field value to ‘Yes’ in order to use this feature and configure the document type to be used for Invoice document review.

Go to *Project management and accounting > Setups > projects360 Parameters > Invoicing Tab.*

Apyrse tool setup

On projects360 parameter form, under Invoicing tab, a new parameter “Activate Apyrse markup tool” has

been introduced to manage Invoice document review in PDF format. These capabilities enable users to make the required changes directly on the PDF invoice, ensuring accuracy and reducing the need for manual adjustments. User needs to set the 'Activate Apryse markup tool' field value to 'Yes' in order to use this feature and define the related fields.

Update references in DocuRef batch process hyper link is provided to update the document process on the existing invoice review documents.

Go to Project management and accounting > Setups > projects360 Parameters > Invoicing Tab.

The screenshot displays the 'projects360 parameters' setup page for Invoicing. The page is divided into several sections:

- INVOICE ENHANCEMENTS:** Includes fields for 'Activate invoice enhancements' (Yes), 'Default invoicing group' (InvoiceGrp), 'Rounding type' (Rounding by project), 'Rounding fee category' (Rounding), 'Invoicing group translations' (No), 'Invoicing paragraph' (Yes), 'Role billing descriptions' (Yes), and 'Enhanced invoice header/footer ...' (Yes).
- CUSTOMER PO:** Includes fields for 'Activate customer PO matching' (Yes), 'Invoice amount to exclude tax' (Yes), 'Activate customer PO managem...' (Yes), 'Email template' (INVEmail), 'Email provider ID' (Exchange), 'Email attachment' (Yes), and 'Attach as PDF' (Yes).
- INVOICE DOCUMENT REVIEW:** Includes fields for 'Activate invoice document review' (Yes), 'Document type' (DocReview), 'Activate Apryse markup tool (Pre...' (Yes), 'Apryse web server URL' (https://aprysewebapp.hsopro...), and 'Apryse license key' (*****).
- APRYSE MARKUP TOOLBAR:** Includes fields for 'Enable annotate toolbar' (Yes), 'Enable shapes toolbar' (Yes), 'Enable edit toolbar' (Yes), 'Enable insert toolbar' (Yes), 'Enable redact toolbar' (Yes), 'Enable measurement toolbar' (Yes), 'Enable fill and sign toolbar' (Yes), and 'Enable forms toolbar' (Yes).

The 'Activate Apryse markup tool (Pre...' field is highlighted with a green box, and the 'Update references in DocuRef' link is also highlighted.

Field	Description
Activate Apryse markup tool	Set this field to Yes, to activate the feature.
Apryse web server URL	Set this field with the URL link where the the apryse tool is installed.
Apryse license key	Define license key.
Enable annotate toolbar	Set this field to Yes, to highlight, write text, underline, Strikeout, Squiggly, adding notes.
Enable shapes toolbar	Set this field to Yes, to highlight with different shapes.
Enable edit	Set this field to Yes, to crop the page.

toolbar	
Enable insert toolbar	Set this field to Yes, to insert images, attach files, add signatures, add existing stamps or create custom, point out and add text.
Enable redact toolbar	Set this field to Yes, to redact the sensitive information, financial information.
Enable measurement toolbar	Set this field to Yes, to measures area, perimeter, height, length, or distance between shapes in PDF.
Enable fill and sign toolbar	Set this field to Yes, add existing stamps or create custom, to add text, add signatures, add cross sign, tick sign, dot sign, add calendar.
Enable forms toolbar	Set this field to Yes, to add signature field, add text, add checkbox, add radio button, add list box, add combo box.
Filter notes in comments	Set this field to Yes, to filter the notes in the comments section.

Invoice proposal workflow

On project management and accounting parameter form, under Invoice tab, user needs to set the 'Enable processing invoice proposal workflow' field value to 'Yes' and workflow has to be setup for project invoice proposals in order to use this feature.

Go to Project management and accounting > Setups > Project management and accounting parameters> Invoice Tab.

The screenshot shows the 'Project management and accounting parameters' form in the 'Invoice' tab. The 'INVOICE PROPOSAL WORKFLOW' section is highlighted with a green box, indicating that the 'Enable processing invoice proposals...' toggle is set to 'Yes'. Other sections visible include 'FUNDING ALLOCATION ORDER', 'DEFAULT INVOICE LAYOUT', 'PROJECT CONTRACT', 'PREPAYMENT RATING', and 'BILLING RULES'.

Go to Project management and accounting > Setups > Project management and accounting workflow.

Print destination settings

On the project print management setup form, select a destination to automatically attach the Invoice document to the Invoice proposal for the review. Here user can select any options except for the 'Screen' and invoice document review will work. If the user has set this option to 'Screen', the message pops during the invoice proposal submission but invoice document review do not get attached/created due to technical limitations. If the option selected is 'Print archive', make sure the 'Save in print archive?' is set to yes.

Go to Project management and accounting > Setup > Forms > Form setup > General tab > Print management > Select report > Printer setup option.

Invoice proposal transactions

Invoice lines	Hour
<div> Description Quantity Sales price Line amount </div> <div> Project 00000380 ; ABP_2501... </div> <div> Hours AbhishekV; Internal Training ... 10.00 300.00 3,000.00 </div> <div> Indirect costs 10% Surcharge 100.00 Indirect costs total 100.00 </div>	

- On clicking of Invoice document review button, new form opens with the invoice report attached. Here the approver can leave the notes, corrections or any edits. The workflow approvers can reject so a Project accountant can fix and resubmit the document. On the right hand side of the Invoice review document 'Comments' functionality is added for the users to put in their thoughts and if any clarifications required. Comments can be added on each attachment and history of it will be maintained.

Note – Security roles has been enabled for 'Invoice document review' form same as Invoice proposal form.

Appasaheb Narasannavar
Hi Usha - Can please change the price on highlighted item to 125.00
11/6/2020 06:39:15 PM

Usha Ravindra Rao
Hi Appasaheb, I have made the price changes. Let me know for any other changes.
11/6/2020 06:40:48 PM

Appasaheb Narasannavar
No this looks good. We can send this invoice out. Thanks you
11/6/2020 06:42:43 PM

- After this the project accountant can modify the invoice lines and resubmit the invoice proposal with new document attached to the proposal and hence maintaining the history of the invoice proposal.
- Display of the notes on the invoice document review will be ordered by date and time.
- Added new button called “Open invoice proposal” in the invoice document review form, so user can navigate back to the invoice proposal from “Invoice document review”.
- Added new button called “Invoice archive” in the invoice document review form, so user can open/download the zip file generated as Invoice archives.
- Added new button called “Invoice document review” at the list page of “Work items assign to me” form, So user can navigate to “Invoice document review” form from list page itself and take action accordingly.

The screenshot shows the Dynamics 365 Finance and Operations interface. The top navigation bar includes 'Dynamics 365', 'Finance and Operations', and a breadcrumb trail: 'Common > Common > Work items > Work items assigned to me'. The 'Invoice document review' option is highlighted in the top navigation bar. Below the navigation bar, there are sections for 'PERSONALIZE', 'PAGE OPTIONS', and 'SHARE'. The main area displays a table of 'WORK ITEMS ASSIGNED TO ME' with columns: ID, Subject, Document type, Due date time, From, and Created date and time. The table contains several rows of invoice proposals and project time off entries.

Invoice document review with Apyrse tool

- Once the user has activated and configured Apyrse tool, Invoice document review can be used in PDF format. Based on the parameters selected, different edit options will be made available for the users to highlight, comment, edit and insert.

The screenshot shows the 'Attachments for Invoice proposal: PJIP_00023648, 00008105' interface. The top navigation bar includes 'Finance and Operations' and a breadcrumb trail: 'Delete > Open > Open invoice proposal > Invoice archive > Workflow > Options'. The main area displays a PDF document titled 'Pro forma invoice' with a 'DRAFT' watermark. The document includes a table of expenses and a summary section.

Description	Quantity	Price	Amount
Project 00001394 Invoice document review			
Test 00001394 Invoice document review			
Expenses			
Flights 200.00	2.00	200.00	400.00
Expenses Subtotal	2.00		400.00
Test Subtotal			400.00
Limit: 0.00 To date: 1,500.00 Remaining: 0.00			

Summary section:

Nontaxable	400.00
Taxable	0.00
Grand total	400.00
Currency	USD

- This tool enables many functions for the users where we can download the report with certain options, save the report as PDF or as image, print the report with annotations and comments.
- User is provided panel option where user can insert new pages, replace the file, extract the information or delete the file.

- User is provided view controls where user can rotate clockwise, counterclockwise, single page, double page, full screen.
- User can PAN the page, search words on PDF and filter the comments based on various provided options.
- Based on the parameters activated on the projects360 parameters form, User can use annotations, shapes, edit, insert, redact, measure, fill and sign, user form tools and filter the notes on the PDF.

Simple Adjustments

Currently in Microsoft Dynamics 365 for Finance and Operations, the Invoice proposal form does not give the flexibility to adjust transactions. Enhancements have been made on the Invoice proposal form to perform adjustments for the hour transactions.

This feature provides user the ability to perform adjustments on the hour transactions available on the Invoice proposal. User will be able to modify time, write off time fully or partially with the percent or quantity of hours, write up or down the hours and reapplying of the sales price with this feature. This feature is controlled by the parameter.

This feature also provides user the ability to perform adjustments on the expense transactions available on the Invoice proposal. User will be able to modify expense, write off time expense with this feature. This feature is controlled by the parameter.

Configure

✿ This sections details out the setups required to be configured in order to use the adjustment on invoice proposal functionality.

Parameter Setup

On projects360 parameter form, under Simple adjustment tab, a new set of parameters has been introduced to control the adjustments on the transactions and invoice proposal. User needs to set the field value to 'Yes' in order to use the different functionalities provided.

Go to *Project management and accounting > Setups > projects360 parameters > Simple adjustment tab*
Go to *Project billing > Setups > Billing parameters > Adjustment tab*

The screenshot displays the 'projects360 parameters' form in the 'Simple adjustments' tab. The form is titled 'Set up parameters for simple adjustments' and is divided into three main sections: 'SIMPLE ADJUSTMENTS FOR HOURS', 'SIMPLE ADJUSTMENTS FOR EXPENSES', and 'ADJUSTMENT REQUEST'. The 'SIMPLE ADJUSTMENTS FOR HOURS' section includes parameters like 'Activate modify time' (Yes), 'Activate write off time - transaction' (No), 'Line property id for write off' (Demo-NB), 'Activate write off time - percent' (Yes), 'Activate write off time - quantity' (Yes), 'Activate Write up / write down' (Yes), 'Write up / write down view' (By project, resource, and ca...), 'Company write up/down fee' (WUWD01), 'Activate reapply sales price' (Yes), and 'Copy effective labor cost' (Yes). The 'SIMPLE ADJUSTMENTS FOR EXPENSES' section includes 'Activate modify expense' (Yes), 'Activate write off expense - transaction' (Yes), and 'Activate reapply sales price' (Yes). The 'ADJUSTMENT REQUEST' section includes 'Activate adjustment request' (Yes), 'Require reason code' (Yes), 'Submission is not required' (Yes), 'On-hold reason code' (OH), and 'On-hold action' (OHB). The 'BILLING SCHEDULE' section includes 'Activate simple adjustments' (Yes). The left sidebar shows a navigation menu with options like Invoicing, Simple adjustments, Work breakdown structure, Resourcing, Timesheets, Transactions, Qualification, Billing schedule, Unit billing, Communication, Manage subprojects, Pending work items, Contract management, Fee management, and Quick project search.

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate modify time	When this parameter is set to Yes, user can modify time to other activity, Category or Project on the Invoice proposal for the Hour transactions.
Activate write off time – transaction	When this parameter is set to Yes, user can write off time to Non billable on the Invoice proposal for the Hour transactions.

Line property id for write off	This field is used to default the line property for write offs either fully or partially.
Activate write off time – percent	When this parameter is set to Yes, user can write off time by percent to non-billable on the Invoice proposal for the Hour transactions.
Activate write off time – quantity	When this parameter is set to Yes, user can write off time by quantity to non-billable on the Invoice proposal for the Hour transactions.
Activate Write up/ Write down	When this parameter is set to Yes, user can write up/ write down time updating the net amount in total or net amount for each resource within the Invoice proposal for the Hour transactions.
Write up/write down view	Select write up/write down view perform adjustment by resource, by project/resource/ category or by project/resource/category/company
Company write up/write down fee	Select company write up/write down fee category that will be used to create company write up/write down fee transaction.
Activate reapply sales price	When this parameter is set to Yes, user can reapply the sales price within the Invoice proposal for the Hour transactions.
Copy effective labor rate	When this parameter is set to Yes, cost setting during the adjustment will by default be No for the worker with 'Use effective labor rate' marked for the hour transaction.
Activate Modify expense	When this parameter is set to Yes, user can modify expense to other activity, Category or Project on the Invoice proposal for the expense transactions.
Activate write off expense – transaction	When this parameter is set to Yes, user can write off time to Non billable on the Invoice proposal for the expense transactions.
Activate reapply sales price	When this parameter is set to Yes, user can reapply the sales price within the Invoice proposal for the expense transactions.

Note – Currently, Simple adjustment functionality is dependent on the standard parameter “Invoice proposal” under Allow adjustment of transaction status.

Go to Project management and accounting > Setups > projects360 parameters > Quick project search tab

When the above parameter is marked, Quick project search look up will be displayed when performing simple adjustments.

Performing Simple adjustments

This sections details out the how the hour and expense transactions can be adjusted through the buttons placed for Simple adjustments.

Adjustment to hours

New menu item and buttons have been introduced on the projects for adjustments. These menu item is available for hour ransactions. Through these form user can filter only adjustable transactions and modify time from one project to another, from one category to another and from one activity to another within the same project or another project using “Modify time” button. User can also write off the entire time from chargeable to non-chargeable using “Write off time – transaction button”.

Go to Project management and accounting > Projects >All projects > Manage tab > Transaction details menu > Hour button

Go to Project management and accounting > Projects >All projects > Fee management tab > Transaction details menu > Hour button

The screenshot displays the 'Finance and Operations Preview' interface. The breadcrumb trail is 'Project management and accounting > Projects > All projects'. The 'Manage' tab is active. A dropdown menu for 'Transactions details' is open, showing options: 'Cases', 'Hour', and 'Expenses'. The 'Hour' option is highlighted. Below the menu, a table lists various projects. The table has columns: Project ID, Project name, Legal entity, Project contract ID, Customer name, Fee type, Project stage, and Integration source. The table is filtered by 'simple' in the search bar, 'Active' in the 'Show projects' dropdown, 'Top' in the 'Show levels' dropdown, and 'ussi' in the 'Legal entity' dropdown. The table contains 15 rows of data. The row with Project ID '00000788' is highlighted, showing 'Simple adjustment - Hour 1'.

Project ID	Project name	Legal entity	Project contract ID	Customer name	Fee type	Project stage	Integration source

New parameter is placed “Allow adjustments”, upon marking this parameter only the transaction which are eligible for adjustment will be displayed and allows user to perform the adjustment

Details of the buttons available on the Transaction details inquiry form are as follows –

Buttons	Description
Modify expense	User can modify expense to other activity, Category or Project on the Transaction details inquiry for the Expense transactions.
Write off expense-transaction	User can write off expense to non-chargeable on the transaction details inquiry for the expense transactions.
Reapply sales price	User can reapply the sales price on the expense transactions. When sales price is reapplied ‘Sales currency’ and ‘Sales price’ only will be by default as ‘Yes’ while performing the sales price adjustment.

Adjustment to Work location

New button have been introduced on the transaction details inquiry for adjustments. This button is available for hour transactions. Through this button user can modify the work location on the hour transactions using “Modify work location button”.

Go to *Project management and accounting > Projects >All projects > Manage tab > Transaction details menu > Hour button*

Go to *Project management and accounting > Projects >All projects > Fee management tab > Transaction details menu > Hour button*

Details of the buttons available on the Transaction details inquiry form are as follows –

Buttons	Description
Modify work location	User can modify work location for the hour transactions.

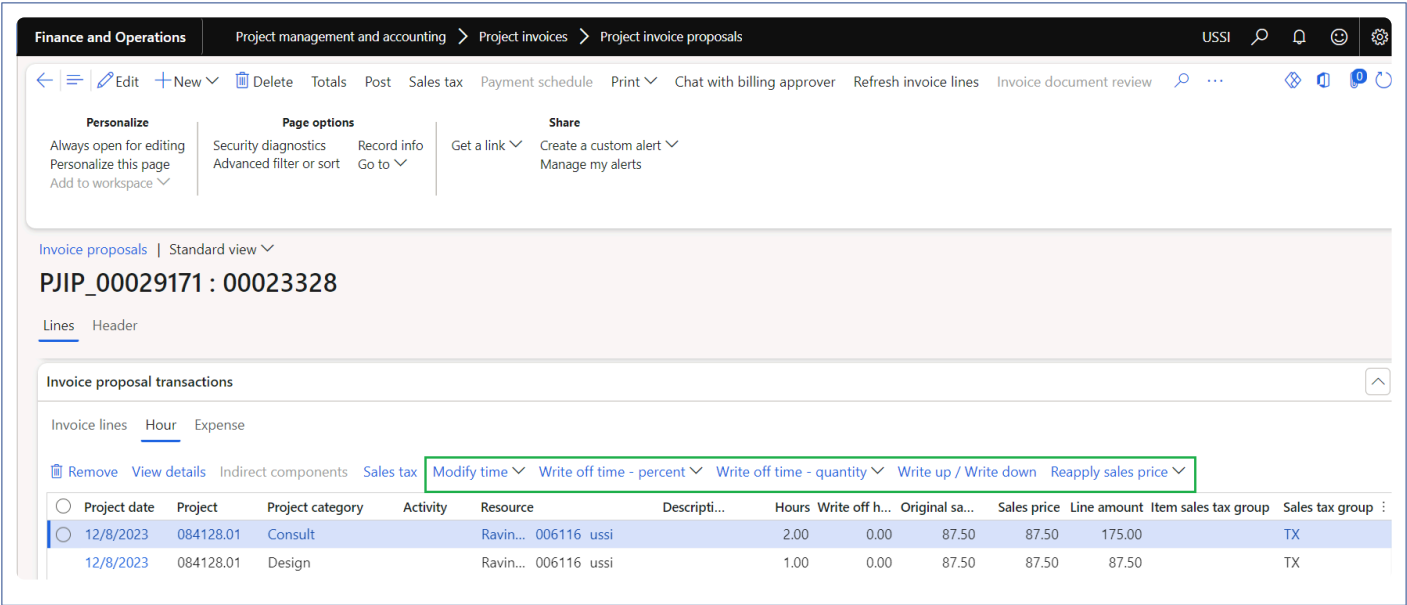

Adjustment to hours on Invoice proposal

New buttons have been introduced on the Invoice proposal for adjustments. These buttons are available for hour and expense transactions. Through new button “Modify time” user can modify time from one project to another, from one category to another and from one activity to another within the same project or another project. User can write off the entire time from chargeable to non-chargeable using “Write off time – transaction button”. User can also modify the role for the hour transactions using this button.

In order to partially write off time two new buttons were provided “Write off time – percent” and “Write off time – quantity” giving user the flexibility to choose between the two ways of partially writing off time. With the new button “Write up/write down” now user has the ability to write up/down amounts for the transactions within the invoice proposal. In order to reapply the sales price on the invoice proposal new button ‘Reapply sales price’ is available.

Go to *Project management and accounting > Project invoices > Project invoice proposals > open an invoice proposal*

Go to *Project billing > All invoices > Invoice proposals > open an invoice proposal*

Details of the buttons available on the Invoice proposal form are as follows –

Buttons	Description
Modify time	User can modify time to other activity, Category or Project on the Invoice proposal for the Hour transactions. Also user can partially move time to another project, activity, role or category. Quick project search function is available to search the project and transfer accordingly.
Write off time – transaction	User can write off time to non-chargeable on the Invoice proposal for the Hour transactions.
Write off time – percent	User can partially write off time by percent to non-chargeable on the invoice proposal for the Hour transactions.
Write off time – quantity	User can partially write off time by quantity to non-chargeable on the invoice proposal for the Hour transactions. User needs to update ‘Write off hours’ and then click on Write off time – quantity to perform the adjustment.
Write up/write down	User can update the line amount for transactions within invoice proposal based on the option selected on the parameters form and the write up/write down amount cannot be utilized in the future invoices.
Reapply sales price	User can reapply the sales price on the Invoice proposal.

When the Write up/write down parameter is selected as ‘By resource’, adjustment can be performed per resource on the write up/write down form.

12/12/2023	084128.01	Common				1.00	0.00	0.00	ALL	TX

Buttons	Description
Modify expense	User can modify expense to other activity, category or project on the Invoice proposal for the expense transactions. Quick project search function is available to search the project and transfer accordingly.
Write off expense – transaction	User can write off expense to non-chargeable on the Invoice proposal for the expense transactions.
Reapply sales price	User can reapply the sales price on the Invoice proposal.

Note – Whenever the adjustment is performed on the invoice proposal, user has to manually click on the 'Refresh invoice lines' button to populate the Invoice lines section.

Note – Whenever the adjustment is performed on the invoice proposal, Fee sales price will get automatically recalculated.

Note – Currently, when Modify time, Write off time – Transaction, Write off time – percent, Write off time – quantity and Reapply sales price adjustment is performed on the Invoice proposal, it will work same as the adjustment performed through the standard adjustment form.

Invoicing groups

Microsoft Dynamics 365 Finance and Operations lacked the ability to group transactions on an invoice proposal based on various attributes. However, we are excited to announce that we have implemented substantial improvements to the invoicing functionality. As a result, you now have the flexibility to group transactions on an invoice proposal using different attributes, including Category, Activity, and more. These enhancements empower you to streamline your invoicing process and tailor it to your specific business needs.

These enhancements provide you with the flexibility to create more organized and detailed invoices, making it easier to manage your transactions. In addition to this, there are a different report formats available that offer different flavors of grouping and an overall project progress status. With these features, you can now easily track and manage your project progress and finances more efficiently.

Our grouping feature is now available on a split screen, visible as a new tab in the invoice proposal. This feature allows you to group transactions and view them in a single screen, making it easy for you to manage and review grouped transactions. The split screen design allows you to view the grouping of transactions on one tab of the screen while reviewing the all the different transactions on the other tabs.

We understand that every business has unique invoicing requirements. That's why our grouping attributes are configurable, and you can set them up based on your specific business needs. You can choose from a range of attributes such as Category, Activity, Roles, Line property, Transaction ID and many more. This customization provides you with the flexibility to configure your invoicing process and group transactions based on relevant attributes.

Configure Grouping

This section explains the setups required to be completed in order to use the Invoicing groups feature effectively.

Parameter Setup

On projects360 parameters from, in the Invoicing tab, Invoice enhancements group has been introduced to control this feature.

The fields available in parameters pertaining to the Project Invoicing groups feature are as follows:

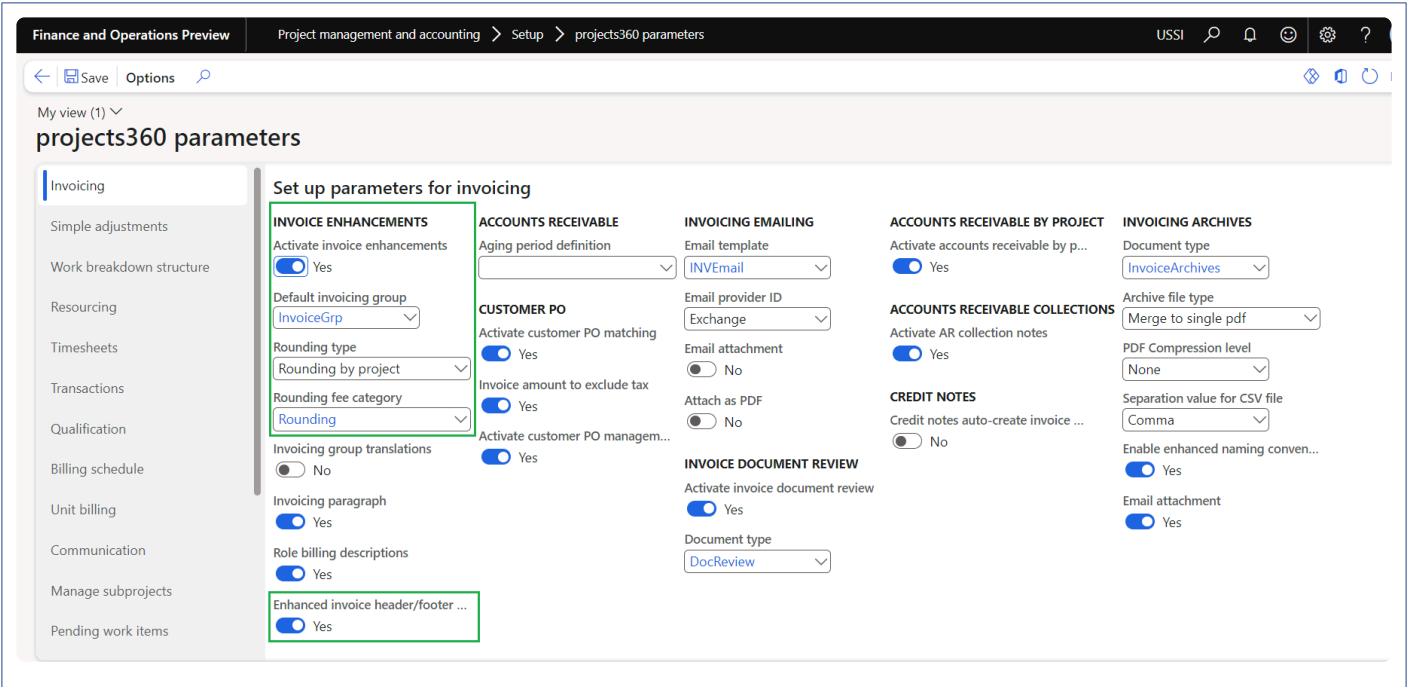

1. **Activate invoice enhancements:** Selecting this check box will activate invoicing groups feature.
2. **Default invoicing group:** The user can pick up the invoicing group that has to be defaulted onto the funding sources in the project contract form. All Project Invoicing groups defined in the invoicing group form will be available for selection in this drop-down.
3. **Rounding type:** The user can set the rounding type options which will be applied while posting the invoice proposal. There are 3 options 'General rounding', 'Rounding by project', 'None'. When 'General rounding' option is selected, fee rounding journal will get posted for the first project in the hierarchy. When 'Rounding by project' option is selected, fee rounding journal will get posted for the project for which rounding is raised. When 'None' option is selected, user will be stopped from posting.
4. **Non-printing fee category:** Fee categories, which are not of the type deferred, will be displayed in this lookup. The fee category chosen in this field would be used to create a fee journal to capture the rounding difference that may arise after grouping transactions based on the Project Invoicing groups. The fee journal created out of such rounding differences should not be included in the Invoice format/ printing.
5. **Enhanced invoice header/footer text:** When this parameter is set to Yes, Formatted invoice footer text will get displayed on project invoice proposal form and values available on Formatted footer text will be printed on the invoice report.

Note – When Fee category is selected in Non-printing fee category, make sure the 'Resource' field on the category is set to 'Never' as this journal is automatically created and posted for rounding difference.

Go to Project management and accounting > Setups > projects360 Parameters > Invoicing tab

Go to Project billing > Setups > Billing parameters > General tab

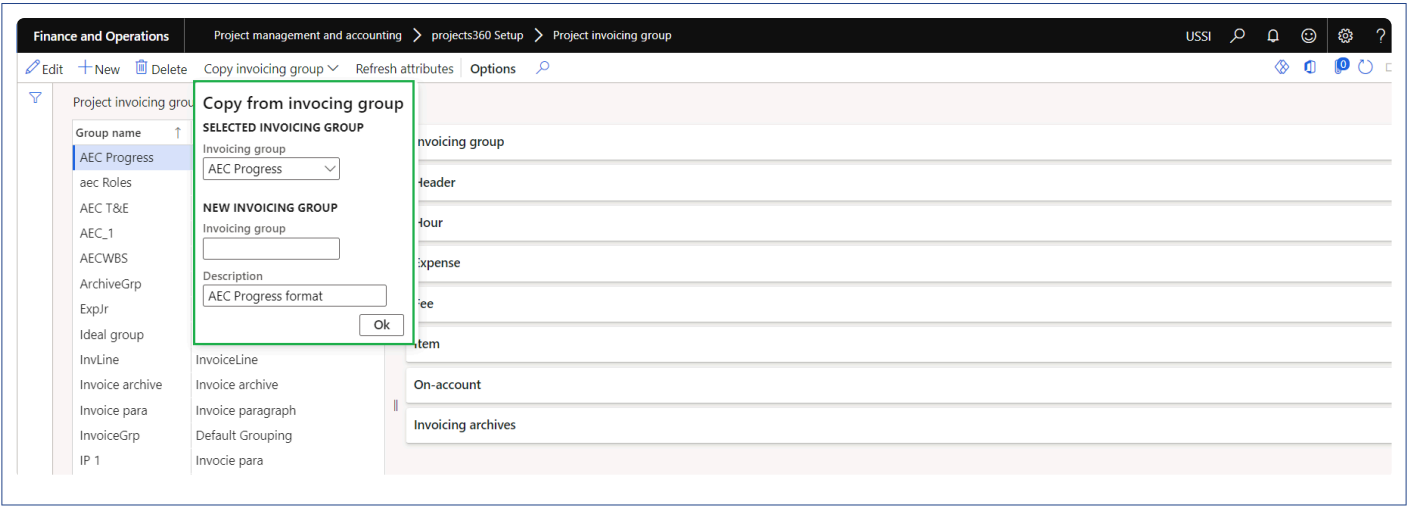

Setting up Invoicing groups.

Copy invoicing group

The user would be able to easily copy an existing invoicing group to a new invoicing group with all the details intact. This feature saves you valuable time and effort by allowing you to replicate an existing invoicing group with just a few clicks. By copying the group, you will have all the details from the existing invoicing group transferred to the new group, reducing the need for manual data entry.

Go to *Project management and accounting > Setup > projects360 Setup > Project invoicing group*.
Go to *Project billing > Setup > Project invoicing group*

Header Section

The user would be able to group transaction types based on some fixed options/attributes. The settings

defined in the group, would determine the way the invoice lines would be grouped to form the Invoice lines (Body section of the Invoice). Define the invoicing groups and the attributes that must be grouped on the invoices in the Project invoicing group form.

The screenshot displays the 'Project invoicing group' configuration form. On the left, a list of existing groups is shown, including 'AEC Progress', 'AEC Roles', 'AEC T&E', 'AEC T&E COPY', 'AEC_1', 'AECWBS', 'ArchiveGrp', 'AS_TEST', 'BPh', 'Cost Plus Progress', 'ExpJr', 'Grouping eval 2', 'Grouping eval 3', 'Grouping evaluat...', 'Ideal group', 'InvLine', 'Invoice archive', 'Invoice para', 'InvoiceGrp', 'IP 1', 'New One', 'Paragraph', and 'Parent project'. The main configuration area on the right includes sections for 'INVOICING GROUP SEPARATOR', 'PROJECT PARENT LEVEL GROUPING', 'SUBPROJECT LEVEL 1 GROUPING', 'PROJECT LEVEL GROUPING', 'TRANSACTION LEVEL GROUPING', and 'FEE MANAGEMENT'. Each section contains various checkboxes, dropdowns, and text fields for configuring the invoicing group.

The fields available in this form are as follows:

1. Group name: The user can enter the name of this invoicing group.
2. Description: The user can enter the description of the invoicing group in this field.
3. Invoicing group separator: The fields in this group are:
 - Separator: There are several separator signs available the user can select one. This will be used to separate the description of the line, in case more than one attribute is chosen for description. For example, if the description is category and resource, then the same will be displayed as: Category, Resource name, etc.. The options of characters available are as displayed in the screenshot below:
 - Show Prepayment: When this check box is selected and user posts any on account or milestone transactions, then the invoice grouping interface will show records transaction type as prepayment or invoice grouping interface shows Milestone for on-account and milestone records.
4. Project Parent level grouping: The check boxes below this group bring in the highest level of totaling on the invoice, which is the totals at the parent project level.
 - Parent project heading: Marking of this check box signifies that the user would be able to group the transactions on the invoice based on each parent project separately. This can be with further grouping based on transactions and subgroups based on the setup.
 - Parent project total: This check box will be enabled only when the parent project grouping check box is marked. This check box when selected will total up the transactions for each parent project.
 - Grouping caption: The value mentioned in this field will be added as a prefix to the parent project or

project while grouping.

5. Project level grouping: The check boxes below this group bring in the totaling on the invoice, which is, the totals at the project level.
 - Project grouping: Marking of this check box signifies that the user would be able to group the transactions on the invoice based on each project separately. This can be with further grouping based on transactions and sub groups based on the setup.
 - Project total: This check box will be enabled only when the project grouping check box is marked. This check box when selected will total up the transactions for each project.

Note – When parent project heading is marked, project grouping will be automatically turned off and vice versa.

6. Sub project level 1 grouping: The check boxes below this group bring in the totaling on the invoice, which is the totals at the sub project level 1.
 - Subproject grouping: Marking of this check box signifies that the user would be able to group the transactions on the invoice based on each sub project level 1 project separately. This can be with further grouping based on transactions and subgroups based on the setup.
 - Subproject total: This check box will be enabled only when the subproject grouping check box is marked. This check box when selected will total up the transactions for each subproject.
7. Transaction level grouping: The check boxes below this group bring in the next level of totaling on the invoice, which is, the totals at the transaction level.
 - Transaction type: When this check box is selected then the user interface of this form changes to transaction level, as shown in the preceding screenshot. Marking of this check box signifies that the user would be able to group the transactions on the invoice based on the transaction types such as hours, expenses, etc. Depending on this check box the attributes available for grouping changes.
 - Transaction total: This check box will be enabled only when the transaction type check box is selected. This check box, when selected, will total up transactions for each transaction type.
 - Activity roll-up: When this option is turned on then the grouping will rollup transactions to a higher activity level. When this option is turned on, then the Level field is enabled. Example: Activities are at level 2, 2.1, 2.3 and 2.4 and when this parameter is turned on with the level field set to 1, then the transactions at the lower level will all be rolled up to 2 in the above example.
 - Level: Level field indicates as to which level transactions should be rolled up to.
 - Show expense quantity: When this option is turned on, expense quantity will be displayed on the Invoice lines and Invoice report.
 - Show expense sales price: When this option is turned on, expense sales price will be displayed on the Invoice lines and Invoice report.
 - Show Fee quantity: When this option is turned on, fee quantity will be displayed on the Invoice lines and Invoice report.

- **Show Fee sales price:** When this option is turned on, fee sales price will be displayed on the Invoice lines and Invoice report.
- **Cost plus rate:** When this option is turned-on, Cost plus rate information will be displayed on the Invoice lines and Invoice report for Hour and expense transactions.
- **Main project details:** When this option is turned on, a line will be added with main project ID and main project description.
- **Progress details:** When this option is turned on, new section will be printed on the invoice report for each existing main project related with the project contract invoiced.
- **Billing limit details:** When this option is turned on, a line will be added after project group totals with details of Contract value, total invoiced value and remaining value to date.
- **Progress details by billing phase:** When this option is turned on, new feature 'Progress billing phases' will get enabled which allows users to perform progress billing based on a completely new configurable structure only for invoicing purposes.

When the transaction type check box is cleared, then the user interface changes and implies that the level of grouping transactions on the invoice is irrespective of the transaction type that it belongs to. Thus, there is a change in the options of attributes available and there is only one Fast Tab All.

Attributes

Attributes: Attributes is the basis of grouping the transactions on the invoice, it could be a category, or an activity, or a resource, based on which the transactions are being grouped. What attributes are available for grouping is decided based on the check box: Transaction type at the header level of the Invoicing group form. Either split based on transaction types or all transactions. Depending on this choice the number of Fast Tabs change.

When transaction type check box is selected, then there are Fast Tabs for each transaction type with the attributes by which the invoice can be grouped. They are below:

- Resource
- Role
- Sales tax group
- Timesheet ID
- Transaction text
- Transaction type
- Trans ID
- Unit of measure
- Vendor ID
- Resource role printing sequence

Field description on the attributes are as follows:

Group by: Select this check box to group the transaction on the invoice, for the attribute that it has been selected against.

Order by: User can enter numbers in this field based on the order in which he would like to arrange the grouping of the transactions on the invoice. This numbering works along with the group by check box. Only when the group by check box is marked, will those attributes be considered for grouping by.

Example:

The order as per the above setup will be Activity, Resource, Billing rule and Format invoice.

Sub-totals by: This check box, when selected, will group the transaction on the invoice and add a sub-total for the attribute that it has been selected against. The user could sub-total transactions on an invoice for only one attribute, which has been marked by group.

Description: This check box will be enabled only when the group by check box is selected for the attribute. The description of the attribute will be added as a description on the invoice line when this check box is selected. When more than one attribute has been considered for description, then the order of description will be based on the numbers entered in the order by field (ascending order is considered).

Note – When no transactions are marked on the invoicing group then the description of the invoicing group is printed on the invoice.

Project Contract Form

There have been several modifications done to the Project contract form for this feature. Billing approver, a new field has been added in the Project contract under General tab. The user can specify the billing approver for this contract. The worker selected in the field shall be the invoice approver, when the workflow has been set to be a participant; it is described in detail in the workflow modification section of this document.

This field displays the workers in the current legal entity, who can be chosen to be the invoice approver for this project contract.

Go to Project management and accounting > Projects > Project contracts > Assign approvers

Invoice format: There is a new fast tab – Invoice settings, added to the Details button on the funding source fast tab. On this fast tab the below setup can be done:

- Setup the emailing addresses for the Invoice emailing functionality to work, explained later in this document.
- Setup the default header text which will be printed on the Project invoice report.
- Invoice Format: where the user can setup the Invoice format. While using the invoicing group functionality, this option will be defaulted from the Invoicing enhancements parameter setup. The user

can change the invoicing group again on this form. The invoicing group selected in this field shall default onto the invoice proposal and will determine the grouping of the transactions on the invoice.

Performing Invoicing group

This section explains how the transactions can be grouped based different invoice grouping formats setup.

Invoice Proposal Form

There have been several modifications done to the Project Invoice proposal form for this feature.

Go to Project management and accounting > > Project invoices > Project invoice proposals.

Go to Project billing > All invoices > Invoice proposals.

The screenshot displays the 'Project invoice proposals' form in the USSI system. The breadcrumb trail at the top reads: Finance and Operations > Project management and accounting > Project invoices > Project invoice proposals. The form is titled 'PJIP_00005835 : 00004304' and includes a sidebar with 'Invoice proposals' and 'My view (1)'. The main form area is divided into several sections:

- GENERAL:** Includes fields for 'Invoice proposal' (PJIP_00005835), 'Invoice date' (9/28/2020), 'Invoice' (empty), and 'Sales currency' (USD).
- Status:** A dropdown menu set to 'Open'.
- Invoice template:** A dropdown menu set to 'PSAProjInvoice.Report'.
- Funding source:** A dropdown menu set to 'Trendy Department'.
- Billing approver:** A dropdown menu set to 'Usha Ravindra Rao'.
- CONTRACT:** Includes 'Project contract ID' (00004304) and 'Project contract name' (AEC New format 3).
- PRINTING OPTIONS:** Includes 'Invoicing group' (AEC Progress), 'Invoice format' (AEC New format 3), and 'Invoice grouping' (empty).
- Invoice header text:** A text area for the header.
- Invoice footer text:** A text area for the footer.
- Special invoice:** A checkbox.
- PO DETAILS:** Includes 'PO number' (PO963538), 'Review comments' (empty), and 'Method of payment' (empty).
- SERVICE DATES:** Includes 'Service date from' (9/1/2020), 'Service date to' (9/28/2020), and 'Language' (en-us).

At the bottom, there is a section for 'Invoice proposal transaction summaries'.

Fields modified/added in this form are as follows:

Invoicing group – This is a new field in the General Fast Tab of the Project invoice proposal form. In this field, the invoicing group defined at the funding source will default, but the user is able to choose another invoicing group. This group determines the way transactions are grouped in the Project invoicing – split screen on this form as well as on the Invoice format.

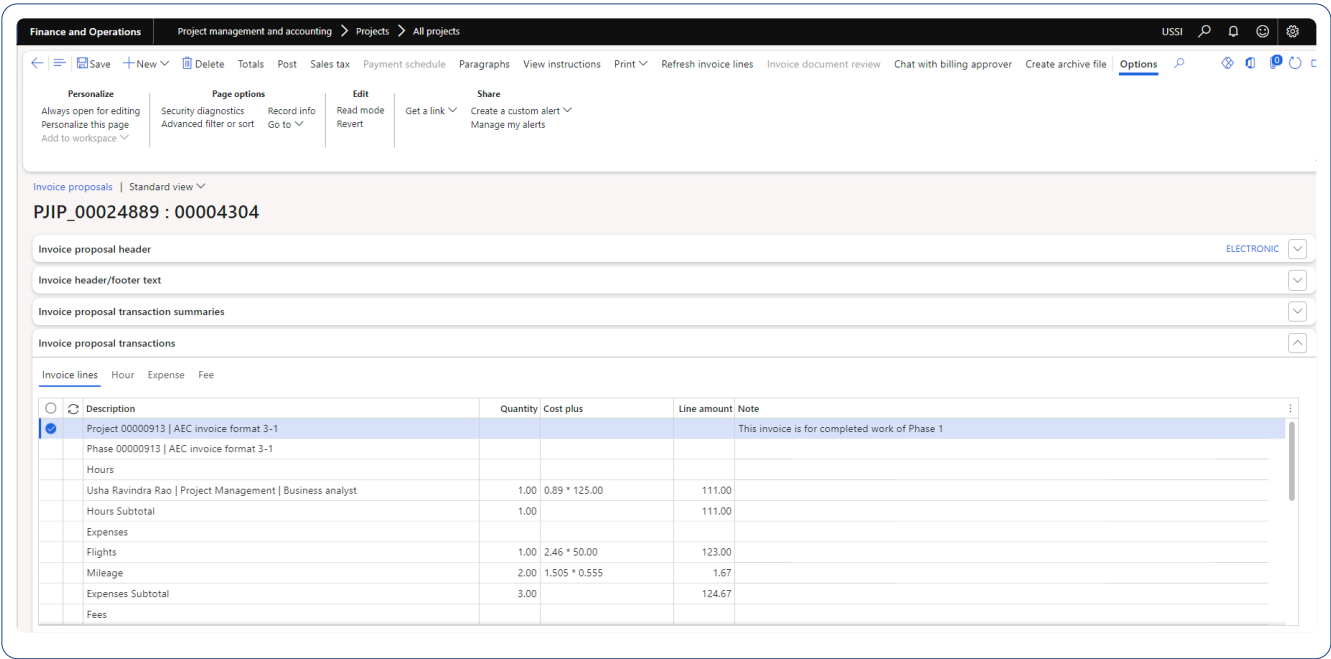

Note – When the user changes any setup on the invoicing group that is already selected in the invoice proposal, then the invoicing group should be re-selected on the invoice proposal for the changes to reflect.

Invoice format: There is a new option added to the Invoice format drop down in the project invoice proposal form. The new option is Invoicing grouping invoice format, and will default as soon as the user selects a value in the Invoicing group field. Only when this format is selected the invoice will be displayed in the way it has

been grouped with the other modifications done to the invoice format.

Invoice footer text: There is a new option added in the project invoice proposal form. The new option is ‘Invoice footer text’ where user can update the footer text and will be displayed on the invoice report.

Project invoicing: This is new fast tab on the Project Invoice proposal called “Invoice proposal transactions” which has been introduced for the users to view the invoice lines grouped based on the invoicing group setup. The content in this pane will be the same as what would be printed in the invoice. The data in this screen can be reconciled with the data that is present in the invoice proposals transactions Fast Tab.

The fields that are present in this new fast tab are as below:

- Description: Displays the description based on the definition of group by, description and order by in the invoicing group.
- Quantity: The quantity of the invoice line is displayed in this column. Quantity field is updated only for hours and item transactions.
- Sales price: Sales price of the line is displayed in this column.
- Line amount: Line amount of the invoice lines is displayed in this column.
- Note: User can enter the invoice line notes to view on the invoice report.

Based on the parameters selected on the invoicing group form, Main project details, grouping caption and billing details will be displayed.

All the Lines of the invoice will be displayed in the Invoice lines tab and based on the transaction type of the transactions in the invoice, new tabs will appear next to the Invoices lines tab, similar to standard behavior. The transaction types tabs could be Hour, Expenses, Items, Fees and On Account.

The add lines, create fees and view other transactions button will be available on the transaction type tabs.

Also, below the transactions types, Remove, View details and Indirect components buttons will be available.

Fee Journal for rounding off amount: Due to grouping of transactions and aggregating of sales price, quantity, line amount, there are chances that there could be rounding issues. But these are not part of the invoice, so to address such rounding issues, a new fee journal would be created by the feature automatically, when there is a difference between the Invoice proposal total and the Invoicing group total. This difference is recorded in a fee journal with the fee category that is defined at the Invoicing enhancements parameter, in the field, non-printing fee category. This journal will not be part of the invoice that is printed nor part of the invoicing group display.

1. Rounding will be calculated only after the invoice body is recalculated.
2. The first check for rounding difference will calculate the absolute value of the rounding difference translated to the accounting currency.
3. Check if the rounding difference is greater than the GL rounding parameter setting.
 - a. If greater, the error is:
 - i. Error message: Invoice rounding of xxxx {Invoice currency} (xxxx {Accounting currency}) is greater than the General ledger rounding parameter of xxxx {Accounting currency}". In case of error user do not post rounding fees and leave the invoice as is and tries to print or post, they will get the error.
 - ii. Error Message: "The Invoice document subtotal of xxxx {Invoice currency} does not tie to the Invoice subtotal of xxxx {Invoice currency}".
 - b. Check if the rounding difference is less than the GL rounding parameter setting.
 - i. When using Invoicing group format that the totals tie before posting or printing. Throw an error if the totals are different.

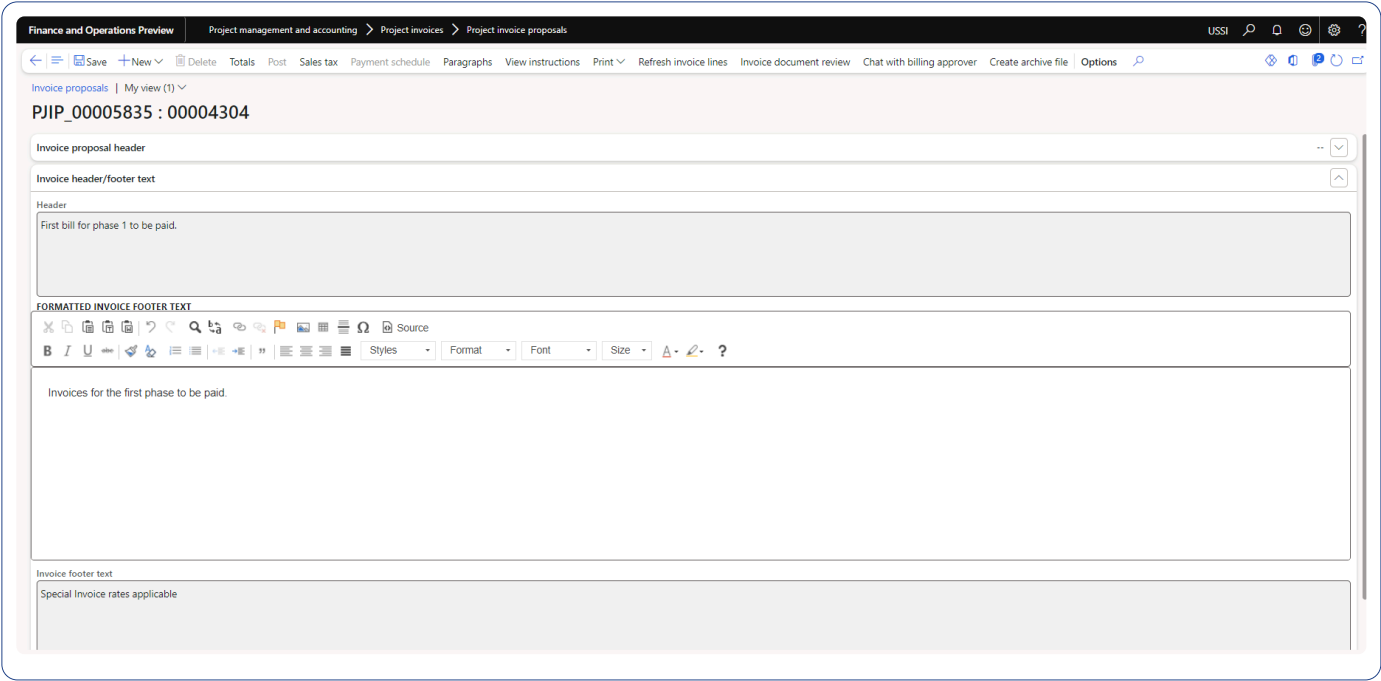

Note – Any modifications on hour, expense and other transaction tabs automatically reflect on invoice lines tab but could take some time to recalculate invoicing groups depending upon the number of records available in the invoice proposal. We suggest users to utilize "Refresh invoice lines" button if number of proposal lines are huge out of which few of them are modified and users want these changes to be reflected on the invoice lines tab immediately.

- * The two types of invoice formats available in standard "format invoice proposal" feature will help users group lines in the same invoice proposal differently.
- * The lines added in the Summary group will show before all other lines and description will only have the Line description from the standard "format invoice proposal". Project level and transaction level grouping is still honored.
- * The lines in the detail group will still behave as before with Line description in the Standard form as an extra attribute.

New button "Split advance amount" is added on the "On account" tab on invoice proposal form. When the "Split customer advance" button is clicked a new dialog form will open where user can split the customer advance amount. Once user defined the required split advance amount, defined split amount record will be created on the invoice proposal and the remaining amount will be available for further invoice proposals.

Based on the parameter “Enhanced invoice header/footer text”, new fields “Invoice header text”, “Formatted invoice footer text” and “Invoice footer text” on the project invoice proposal will be displayed.

Invoice Report

There have been several modifications done to the Project Invoice format to reflect the changes done to the invoice proposal in this feature.

Go to Project management and accounting > Project invoices > Project invoice proposals> Print preview.

Role billing description

projects360 introduces a new feature that allows user to define specific resource role billing descriptions for each role for a specific range of dates. This can be configured at each funding source level which will then consider on the invoices. When the invoice is sent to the customers, it will include the defined billing role descriptions.

The existing “invoicing group” feature is enhanced to use “Role billing descriptions” and be controlled through a parameter.

Configure role billing description

 To start using Role description feature, user needs to perform specific setups. This section details the configuration process.

Parameter setup

On projects360 parameter form, under Invoicing tab, a new parameter “Role billing description” has been introduced. User needs to set the ‘Activate time card entry’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 parameters > Invoicing*

The screenshot shows the 'projects360 parameters' form in the 'Invoicing' tab. The 'Role billing descriptions' checkbox is highlighted with a green box. The form is divided into several sections: INVOICE ENHANCEMENTS, ACCOUNTS RECEIVABLE, INVOICING EMAILING, ACCOUNTS RECEIVABLE BY PROJECT, INVOICING ARCHIVES, and INVOICE DOCUMENT REVIEW. The 'Role billing descriptions' checkbox is located under the INVOICE ENHANCEMENTS section.

Details of the fields available on the projects360 parameters form are as follows –

Fields	Description
Activate time card entry	When this check box is enabled, user can use role billing description.

Role billing description group

Role billing description can be configured for every role with the specific date ranges. Role billing description can be configured with the different languages also.

Go to Project management and accounting > projects360 setups > Role billing descriptions > Role billing description groups

Go to Project management and accounting > Projects > Project contracts

Go to Project management and accounting > Setups > Resources > Resource roles

Finance and Operations

Project management and accounting > projects360 Setup > Role billing descriptions > Role billing descriptions group

<input type="radio"/>	AR Group	Business analyst	Business analyst	Analyst for ERP	en-us	8/1/2021	8/2/2021

Details of the fields available on the Role billing description group form are as follows –

Fields	Description
Role billing description group ID	Define role billing description group ID to be used for invoicing.
Description	Define a description for a role billing description group ID.
Role billing description group ID	Role billing description group ID will default from the header section.
Role ID	Select Role ID to define the billing description.
Role description	Defaults role description from the selected Role ID.
Billing description	Define a billing description for a role ID.
Language	Select a language. This language will be compared with the invoice language and will display billing description.
From date	Define from date.
To date	Define To date.

Project contracts

Role billing description can be configured on each funding source which is then used for the invoicing. User can select the “Role billing description ID” on the funding source level or from the details form.

Go to *Project management and accounting > Projects > Project contracts > Funding sources*

Invoice with Role billing description

* This sections details out on how the role billing description will be displayed on the invoice proposal and invoice based on the attached invoicing group and Role billing description group ID.

Project invoice proposal form

On project invoice proposal form, role billing description will be displayed only when the “Role” attribute is marked on the attached invoicing group and matches the role ID defined on the role billing description group ID which is attached on the funding source. It also matches the invoice date with the date range and the invoice language with the language defined on the Role billing description ID to display the billing description.

Go to *Project management and accounting > Projects > All projects > Project invoice proposal.*

Invoice translation

In prior versions, labels on the invoice like “Description” and “Quantity” could be translated to a foreign language. However, attributes displayed in the body of the invoice such as “Category” or “Activity” could not be translated.

In conjunction with the projects360 Invoice grouping feature, these attributes can now also be translated, allowing a company to send their customer an invoice entirely in the customer’s native language. It’s possible to determine at the Contract level and Invoice grouping level whether to translate, and which specific attributes to translate. Values that do not have a translation selected will still display an untranslated value.

Configure Invoice translation

 This sections details out the setups required to configure for the Invoice translation.

Parameter Setup

On projects360 parameter form, under Invoicing tab, a new parameter “Invoicing group translation” has been introduced to control the Invoice translation feature. When the user makes the value of this checkbox as ‘Yes’, the Invoice translation is activated. This checkbox will get enabled only when “Activate invoicing enhancement” check box is marked.

Go to *Project management and accounting > Setups > projects360 Parameters > Invoicing Tab.*
Go to *Project billing > Setup > Billing parameters > General tab.*

Invoicing paragraph

Currently in Microsoft Dynamics 365 for Finance and Operations, the Manage invoice functionality does not give the flexibility to add or group transactions based on defined paragraph. Enhancements have been made to the invoicing functionality to group transactions based on paragraph defined on the invoice proposal summary or transactions.

This new feature allows users to create and assign paragraph to invoice lines. User will be able to copy the paragraphs from the last contract invoice, prior customer invoice, Invoicing paragraphs template. Invoice grouping can be performed based on the assigned paragraph on the invoice lines.

Configure invoice paragraph

** This section explains the setups required to be completed in order to use the Invoice paragraph feature effectively.*

Parameter Setup

On projects360 parameters from, in the Invoicing tab, a new parameter “Invoicing paragraph” has been introduced to control the Invoice paragraph feature. When the user makes the value of this check box to ‘Yes’, the Invoicing paragraph functionality gets activated. This checkbox gets enabled only when ‘Activate invoicing enhancement’ checkbox is set to ‘Yes’..

Go to *Project management and accounting > Setups > projects360 Parameters > Invoicing tab*

Fields	Description
Invoicing paragraph	When this parameter is set to Yes, paragraphs can be associated to the invoice proposal and transactions can be grouped based on the paragraphs attached.

Project invoice grouping

On project invoicing group form, ‘Paragraph’ attribute is added under under Hour, Expense, Fee, Item, On account and All tab. This checkbox will be available only when ‘Invoicing paragraph’ check box is marked on the parameters.

Go to *Project management and accounting > Setup > projects360 Setup > Project invoicing group*.
Go to *Project billing > Setup > Project invoicing group*

The screenshot shows the 'Project invoicing group' configuration screen. The left sidebar lists various groups, with 'Invoice para' (Invoice paragraph) selected. The main area displays the 'Invoicing group' configuration, including a table of attributes and their order.

Attribute	Group by	Order by	Sub-totals ...	Description
Item sales tax group	<input type="checkbox"/>	15	<input type="checkbox"/>	
Line property ID	<input type="checkbox"/>	9	<input type="checkbox"/>	
Paragraph	<input checked="" type="checkbox"/>	16	<input checked="" type="checkbox"/>	
Project date	<input type="checkbox"/>	4	<input type="checkbox"/>	
Resource	<input type="checkbox"/>	3	<input type="checkbox"/>	
Role	<input type="checkbox"/>	11	<input type="checkbox"/>	

Invoicing paragraph template

New form ‘Invoicing paragraph template’ is introduced to create and maintain invoice paragraph templates. ‘Paragraph’ created can be attached directly on the invoice proposal or can be attached on the funding sources.

Go to *Project management and accounting > Setup > projects360 Setup > Invoicing paragraph > Invoicing paragraph templates*.

The screenshot shows the 'Invoicing paragraph template' configuration screen. The left sidebar lists various templates, with 'Para template' (Paragraph template) selected. The main area displays the 'Invoicing paragraph template' configuration, including a table of paragraph numbers and descriptions.

Paragraph number	Paragraph
1	Paragraph for phase 1
2	Paragraph for phase 2

Details of the fields available on the invoicing paragraph template form are as follows –

Fields	Description
Paragraph template ID	Define paragraph template ID.

Description	Define description for the paragraph template ID.
Paragraph number	This field defaults with the numeric.
Paragraph	Define paragraph.

Project Contract Form

A new field ‘Default paragraph template’ has been added in the Project contract under General tab. User can setup the default paragraph template. While using the invoicing paragraph functionality, this option will get enabled and defaults on the funding source line. The invoicing paragraph selected in this field shall default onto the invoice proposal and will determine the grouping of the transactions on the invoice.

Grouping by paragraph

 This sections details out the attaching the invoice paragraph on project invoice proposal and grouping based on invoice paragraph.

Project invoice proposal form

On project invoice proposal form, new form ‘Paragraphs’ is added where the user can attach or create the required paragraph. User has a option to copy the invoice paragraph or create new paragraphs. Below options are provided to copy the invoice paragraph.

- 1. Last contract invoice: Selecting this option will copy the invoicing paragraphs from latest posted invoice proposal related to the project contract.
- 2. Prior customer invoice: Selecting this option will copy the invoicing paragraphs from invoice proposal related to selected customer invoice.
- 3. Invoicing paragraph template: Selecting this option will copy the selected invoicing paragraphs from the ‘Invoicing paragraph template’.

Go to *Project management and accounting > Projects > All projects > Project invoice proposal > Paragraph.*

Once the paragraphs are attached on project invoice proposal form, user can select the paragraph number on the ‘Invoice transaction summary’ which will get defaulted on the transactions and user has an option to change the paragraph number for each transaction. Based on the paragraph number, transaction grouping will be displayed on the Invoice lines tab and on Invoice report.

Invoice Archives

Invoices are normally used to post the transaction and then this information is sent over to the customer via email. In the current design of Microsoft Dynamics 365 for Finance and Operations, users can attach and view the receipts or documents on the timesheets or expense reports. projects360 helps in bringing these attached documents to project invoice.

This feature will help the users attach the documents on the Invoice as archived files. Users can later download all these attachments from posted transactions and use those files for future reference. This feature has been developed as an enhancements to the archive feature.

Configure Invoice Archive

This section explains the setups required to be completed in order to use the Invoice archive feature effectively.

This feature will help the users to attach the document on the Invoice as archive files. There are no parameters which control the activation of this feature, but it has the following pre-requisites.

- Document type needs to be configured on the projects360 Parameter.
- Invoicing groups need to be defined.

Parameter Setup

Invoicing archives section has been added to projects360 parameters form to setup the document type. Document type fields needs to be selected on this form in order to use invoice archiving feature.

Go to Project management and accounting > Setup > projects360 Parameters

Go to Project billing > Setup > Billing parameter > Archive tab

1. Document type: Select document type for Invoice archive.
2. Archive file type: This field has two options “Zip file” and “Merge to single pdf”. When the Zip file option is selected, all the documents will be archived through zip file. When the Merge to single pdf option is selected, all the documents will be archived through a single pdf file.
3. PDF compression level: Based on the selected option output pdf file will be compressed. The available options are Default, Normal, None, Best speed, Best, Below normal, Above normal.
4. Separation value for CSV file: CSV file contains comma separated values by default. If we have different delimiters in the file then these options can be used Semicolon, Tab, Space, Colon, Pipeline.
5. Enable enhanced naming conventions: When this parameter is marked, new naming convention is applied and re-arranges all backup files inside the zip folder in a more practical way.
6. Email attachment: When this parameter is marked, invoice archive files will be attached to email while posting the invoice proposal and while resending the email.

Document Management Parameters

On the document management parameters page, you can set the maximum file size of the files you want to archive.

Go to *Organization administration > Document management > document management parameters*.

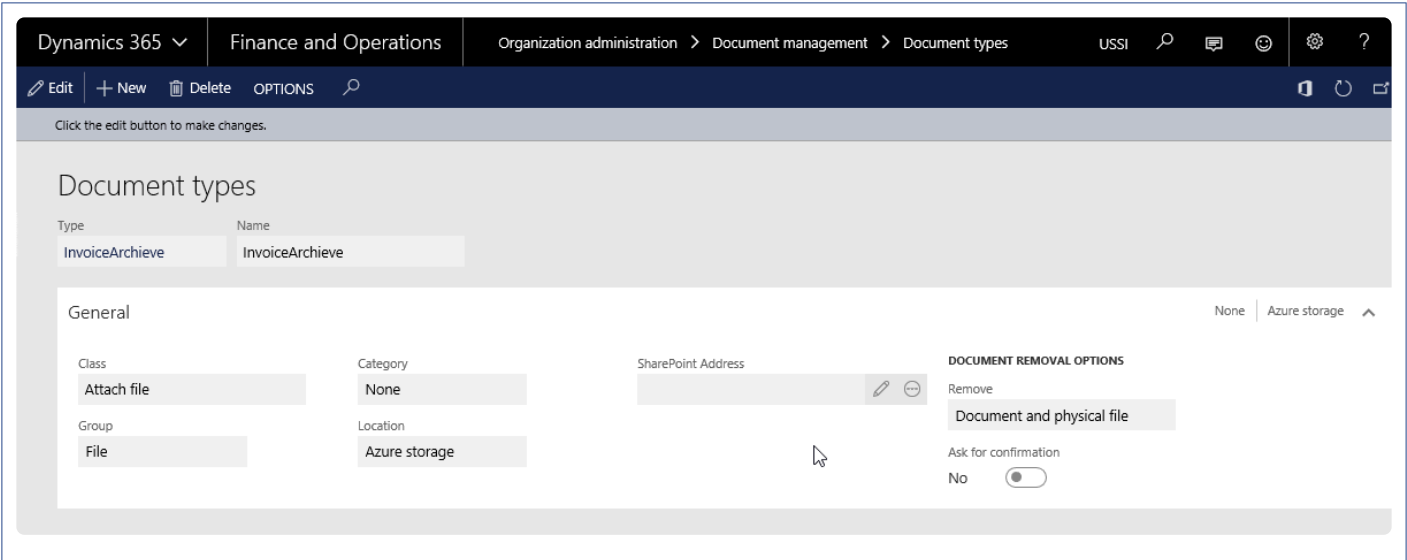

Go to *Project billing > Setup > Billing parameter > Archive tab*

Document Type

In the document types form set the document archive location as the Azure storage and configure the other other details as required.

Go to *Organization administration > Document management > Document type*.

Go to *Project billing > Setup > Document type*

Project Invoicing Group

The Project invoicing group form is modified to add an additional tab (Invoice Archive) where the documents or reports that have to be archived can be selected by the user.

Go to *Project management and accounting > Setup > project360 Setup > Project invoicing group*
Go to *Project billing > Setup > Project invoicing group*

A new fast tab called Invoicing archives has been added as the last tab on the Invoice grouping form. This tab contains the below options which the user could Mark or unmark to include or exclude documents/reports onto the invoice as an archive.

The options available as check boxes are as below:

- Billing schedule external documents.
- Expense journal external documents.
- Expense report.
- Expense report external documents.
- Invoice proposal external document.
- Invoice transaction report.
- Parent project external documents.
- Project external documents.
- Timesheet report.
- Timesheet external document.
- Vendor invoice external documents.

When the user selects the checkbox, then that document type will be zipped and archived on to the azure storage as defined in document management.

Note – The documents/reports that are attached to the invoice proposal would be archived in the azure storage, while archiving the files are compressed upto 70% of its original size.

What Files are Attached

✿ This section explains which documents are attached with respect to different document types.

Timesheet Report

This is available in timesheets on the action pane, as shown below.

This report is launched at the header level, it contains all the line details from timesheet, thus this report is filtered to display only the timesheet lines that are being invoiced in the invoice proposal.

Go to *Project management and accounting > Timesheets > All timesheets*.
Go to *Timesheets > Process timesheets > All timesheets*.

Timesheet External Document

These are documents that are attached to the Timesheet while posting the timesheet via attachments in the document handling feature, but with the restriction set to External as shown in the below screenshot. only such documents are considered for archiving on the Invoice on invoice proposal form.

Go to *Project and management accounting > Timesheets > All Timesheets*

Go to *Timesheets > Process timesheets > All timesheets.*

The screenshot displays the Dynamics 365 Finance and Operations interface. The top navigation bar shows the path: Project management and accounting > Timesheets > All timesheets. The left sidebar contains tabs for MAINTAIN, RELATED INFORMATION, MANAGE, and PRINT. The main area shows a list of timesheets with columns for Timesheet number, Resource, and Period. The 'Attachments for Resource: Aaron Con, 000409, ussi, 00000124' form is open, showing a list of attachments. The 'Restriction' dropdown is set to 'External'.

Timesheet number	Resource	Period
00000124	Aaron Con	6/26
00000123	Aaron Con	6/19
00000122	Aaron Con	6/12
00000098	Lekha Nishad	7/31
00000097	Lekha Nishad	7/31
00000078	Lekha Nishad	7/31
00000077	Lekha Nishad	7/31
00000076	Lekha Nishad	7/31
00000075	Lekha Nishad	7/31
00000074	Lekha Nishad	7/31

Vendor Invoice External Document

These are documents that are attached to the Vendor invoices, from the attachments in the documents handling feature, but with the restriction set to External as shown in the below , only such documents are considered for archiving on the Invoice.

Go to *Accounts payable > invoices > Open vendor invoice.*

The screenshot displays the Dynamics 365 Finance and Operations interface. The top navigation bar shows the path: Accounts payable > Invoices > Open vendor invoices. The 'Attachments' icon in the top right corner is highlighted with a red arrow. The main area shows the 'Attachments for Vendor account: US_SI_000014, 3/27/2017' page. The 'Restriction' dropdown menu is set to 'External'.

Invoice	Vendor account	Name
00000144_Inv	US_SI_000014	Hardware Comp
00000172_Inv	US_SI_000014	Hardware Comp
	US_SI_000025	Julia Funderburk

Parent project External Document

These are documents that are attached to the parent project via the attachments in the document handling feature, but with the restriction set to External as shown in the below screenshot, only such documents are considered for archiving on the Invoice of the parent and child projects.

Go to *Project management and accounting > Projects > All projects*

The screenshot shows the Dynamics 365 Finance and Operations interface. The top navigation bar includes 'Finance and Operations', 'Project management and accounting > Projects > All projects', and 'USSl'. The left pane shows a list of projects with '00000430' selected. The main pane displays the 'Attachments for Projects - Project ID: 00000430, Winter Park Boathouse' window. A red arrow points to the 'Restriction' dropdown menu, which is set to 'External'.

Project ID	Project name
00000426.30	Construction Documents
00000426.40	Construction Administration
00000427	Inv Doc Rev
00000428	SQL01
00000429	Timesheet activity lookup
00000430	Winter Park Boathouse
00000430.10	Construction Administration
00000430.20	Bidding/Negotiation
00000430.30	Renderings
00000431	Milestone
00000432	Miles - 001

Expense Report

This is available in expense report on the action pane header, as shown below.

This report is launched at the header level, it contains all the line details from expense report and the same is archived on the invoice proposal.

Go to Expense management > My Expense > Expense reports > New Expense report > Print > Expense report

Expense Report External Documents

These are documents that are attached to the Expense report via attachments option in the document handling feature, but with the restriction set to External as shown in the below screenshot, only such documents are considered for archiving on the Invoice.

Go to Expense management > My Expense > Expense Reports

Expense journal External Documents

These are documents that are attached to the Expense journal via attachments option in the document handling feature, but with the restriction set to External as shown in the below screenshot, only such documents are considered for archiving on the Invoice.

Go to Project management and accounting > Journals > Expense

Invoice Proposal External Documents

These are documents that are attached to the Invoice proposal by the attachments in the document handling feature, but with the restriction set to external as shown in the below screenshot. Only such documents are considered for archiving on the Invoice. However, files that have been generated through this functionality will be excluded to avoid cyclic archives.

Go to Project management and accounting > Projects > All Projects > Invoice proposal button.

Go to Project billing > All invoices > Invoice proposals.

The screenshot displays the Dynamics 365 Finance and Operations interface. The top navigation bar shows 'Project management and accounting > Projects > All projects'. The main area is titled 'Attachments for Invoice proposal: PJIP_00000297, PJTY_000088'. The 'Restriction' dropdown is set to 'External'. The 'Attachment' table is empty.

Attachment

Billing schedule External Document

These are documents that are attached to the billing schedule via the attachments in the document handling feature, but with the restriction set to External as shown in the below screenshot, only such documents are considered for archiving on the Invoice.

Go to Project management and accounting > Projects > All projects > Billing schedules

The screenshot displays the 'Billing schedule' form in the HSO | ProServ projects360 system. The form is titled 'BS00000463 : 00000089' and is divided into several sections:

- General:** Includes fields for Billing schedule Id (BS00000463), Project contract ID (00000089), and Contract name (City Manufacturing).
- IDENTIFICATION:** Includes fields for Billing period start, Billing period end (10/29/2021), and Service date from.
- Billing schedule lines:** Includes a table with columns for Project ID and Project name. The table contains one row with Project ID 00000092 and Project name City Manufacturing.
- Attachments:** Includes a section for 'Simple adjstment transac...' with a table for Description, Type, and Attached. The table contains one row with Description 'Simple adjstment transac...', Type 'Image', and Attached 'Yes'.
- DETAILS:** Includes a section for 'Restriction' with a dropdown menu set to 'External'.
- CREATE:** Includes a section for 'Created by' (UshaR) and 'Created date and time' (11/10/2021 04:53:02 AM).

A red arrow points to the 'Options' menu in the top right corner of the interface.

Invoice transaction report

Report is generated when the Invoice archive files gets generated. This report displays all the transactions that are available on the selected project invoice proposal.

Go to Project management and accounting > Projects > All projects > Billing schedules

Total amount : 5,420.00

Note – “Restriction” field defaults to “External” for the file type which is set as “Document type” on the projects360 parameters when user manually attaches the documents on attachments.

Process to Attach Files

This section explains how the invoices can be archived with respect to different document types.

Process to Create Invoice Archives

A new button has been added to the Invoice proposal on the action pane.

There are two ways to view the archives, one is automatic and another is manual. Automatic archives will be available only when the Invoice proposal workflow is active. Once the user submits the workflow for approval, the archives are generated automatically.

When the invoice proposal workflow is not active, then the user should generate the archives manually, by clicking on the Create archive file button on the action pane header.

When the user clicks on the button, then the files that have been selected for archiving at the invoicing group will be archived, and a message will be displayed on completion.

Message – The Invoice archive ZIP file is being compiled in the background for Invoice proposal PJIP_0000XXXX.

Click the edit button to make changes.

Hours			
Project Planning ; Project Mana...	10.00	350.00	3,500.00
Hours Subtotal	10.00		3,500.00
Project 00000128 Subtotal			3,500.00

Note – Based on the parameter setup 'Maximum file size in megabytes' on document management parameters form, providing the information on the size of each file that is getting attached into the zip folder.

The zipped documents will be available for viewing when the user clicks on the Attachments icon in the action pane header on Invoice proposal form. When the user selects the zip file in the documents handling form and click on the open button, the contents that have been zipped will be visible as shown in the below screenshot.

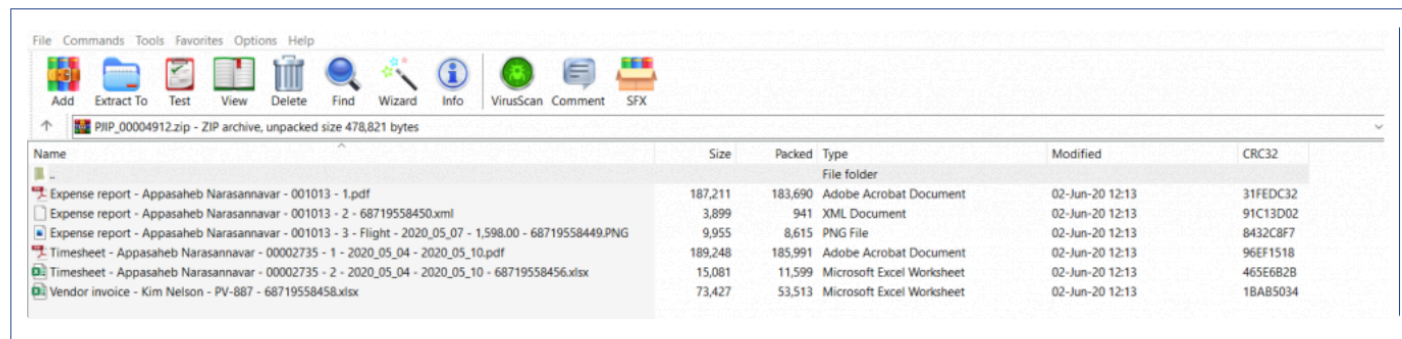

File naming conventions followed for the reports

- Timesheet: Timesheet number_Employee name_ yyyy_mm_dd (period ending date)
- Vendor invoice external documents: Vendor invoice – Vendor Invoice_Vendor name_Invoice id_Recid
- Project external documents: no change in file name
- Project Invoice proposal: no change in file name
- Expense report report: Expense report number_Employee name_Recid
- Expense report external documents
- Documents not attached to a line: Expense report number_Employee name_Recid”
- Documents attached to a line: Expense report number_Employee name_Line number_ {yyyy_mm_dd}”
- Expense journal external documents
- Documents attached to header: Expense journal number_Recid”
- Documents attached to a line: Expense journal number_Employee name_Line number_ {yyyy_mm_dd}_Recid”
- Invoice transaction report

New naming conventions

When the “Enable enhanced naming convention” parameter is turned on, naming convention of the files will be visible as shown in the below screenshot.

New File naming conventions followed for the reports

Expense report (SSRS)

Expense report {@Label Invoice language} – {Resource name} – {Expense report #} – 1

Expense report external documents

Expense report {@Label Invoice language} – {Resource name} – {Expense report #} – 2 – {Attachment RecId*}

Expense report external documents with multiple ies

Expense report {@Label Invoice language} – {Resource name} – {Expense report #} – 3 – y – {Receipt date YYYY_MM_DD} – {Amount ##.##} – {Attachment RecId*}

Expense journal header documents

Expense journal {@Label Invoice language} – {Resource name} – {Expense report #} – 2 – {Attachment RecId*}

Expense journal external documents with multiple ies

Expense journal {@Label Invoice language} – {Resource name} – {Expense report #} – 3 – y – {Receipt date YYYY_MM_DD} – {Amount ##.##} – {Attachment RecId*}

Time sheet report (SSRS)

Time sheet {@Label Invoice language} – {Resource name} – {Timesheet #} – 1 – {Week start YYYY_MM_DD} – {Week end YYYY_MM_DD}

Time sheet report external documents

Time sheet {@Label Invoice language} – {Resource name} – {Timesheet #} – 2 – {Week start YYYY_MM_DD} – {Week end YYYY_MM_DD} – {Attachment RecId*}

Vendor invoice attachments

Vendor invoice {@Label Invoice language} – {Vendor name} – {Invoice #} – {Attachment RecId*}

When the “Email attachment” parameter is marked under “Invoice emailing” and “Invoice archive”, invoice archive files gets created/attached on the to email as an attachment while posting the invoice proposal.

When the Archive file type on the parameter is set to ZIP file then Invoice archive file is generated with Project

invoice proposal ID. When the Archive file type on the parameter is set to Merge to single PDF then Invoice archive file is generated with Funding source name + Project invoice proposal ID.

When the Invoice report is archived, invoice field will be generated with Funding source name + Invoice ID.

Generating One PDF

Once the archive file is created automatically or manually, one PDF will get generated and attached in the standard attachments.

Below are the files which will get converted into PDF.

- Note

- Word
- Excel
- PPT
- Image
- PDF
- CSV
- Tiff

When Archive file type is set as Merge to single PDF and Enable enhanced naming conventions parameter is marked, documents attached on various process will be displayed in the below sequence when invoice archive is generated.

Invoice transactions report

Timesheet header external documents (Resource Name -> Date)

Timesheet lines external documents (Resource Name -> Date)

Vendor invoice header external documents (Vendor account-> Invoice id)

Vendor invoice lines external documents (Vendor account-> Invoice id)

Expense report header external documents (Resource Name -> Date)

Expense report lines external documents (Resource Name -> Date)

Expense journal header external documents (Resource Name -> Date)

Expense journal lines external documents (Resource Name -> Date)

Invoice proposal external documents (Attachment dates)

Billing schedule header external documents (Attachment dates)

Billing schedule lines external documents (Attachment dates)

Parent project external documents (Attachment dates)

Project external documents (Attachment dates)

Timesheet report (Resource Name -> Date)

Expense report (Resource Name -> Date)

Transmitting Big Attachments

Sometimes the attachments are larger than what can be transmitted by email or emailing ZIP files isn't possible due to restrictions set on the server side. In these cases, the recommended solution is to setup a SharePoint site per customer and upload the files or documents on that location to be shared. Then the invoice email can include a link to the SharePoint document.

Merge Invoice documents

✿ This section explains the setups required and the process to use the Merge invoice documents feature effectively.

This feature will help the users to merge the invoice report and all associated invoice archive documents into a single, comprehensive PDF and can be sent through a mail. This feature is controlled through a parameter 'Activate merge invoice documents'. This feature works only if 'Archive file type' is set as 'Merge to single PDF'.

Parameter Setup

New parameter 'Activate merge invoice documents' has been added to projects360 parameters form to control the merge invoice document feature. Document type field needs to be selected on this form in order to use this feature.

Go to *Project management and accounting > Setup > projects360 Parameters*

The screenshot shows the 'projects360 parameters' setup form. The 'INVOICE DOCUMENTS' section is highlighted with a green box. It contains the following fields:

- Activate merge invoice documents:** A toggle switch set to 'Yes'.
- Document type:** A dropdown menu set to 'Single PDF'.

Other sections visible in the form include:

- INVOICE ENHANCEMENTS:** Includes 'Activate invoice enhancements' (Yes), 'Default invoicing group' (InvoiceGrip), 'Rounding type' (Rounding by project), 'Rounding fee category' (Rounding), 'Invoicing group translations' (Yes), 'Invoicing paragraph' (Yes), 'Role billing descriptions' (Yes), and 'Enhanced invoice header/footer' (Yes).
- ACCOUNTS RECEIVABLE:** Includes 'Aging period definition' (30/60/90/120), 'Activate customer PO matching' (Yes), 'Invoice amount to exclude tax' (Yes), and 'Activate customer PO management' (Yes).
- INVOICE DOCUMENT REVIEW:** Includes 'Activate invoice document review' (Yes), 'Document type' (DocReview), 'Activate Apryse markup tool' (Yes), 'Apryse web server URL' (https://aprysewebapp.hsopro...), and 'Apryse license key' (*****).
- APRYSE MARKUP TOOLBAR:** Includes 'Enable annotate toolbar' (Yes), 'Enable shapes toolbar' (Yes), 'Enable edit toolbar' (No), 'Enable insert toolbar' (No), 'Enable redact toolbar' (No), 'Enable measurement toolbar' (No), 'Enable fill and sign toolbar' (Yes), 'Enable forms toolbar' (Yes), and 'Filter notes in comments' (No).
- ACCOUNTS RECEIVABLE BY PROJECT:** Includes 'Activate accounts receivable by project' (Yes).
- ACCOUNTS RECEIVABLE COLLECTIONS:** Includes 'Activate AR collection notes' (Yes).
- CREDIT NOTES:** Includes 'Credit notes auto-create invoice' (Yes).
- INVOICING ARCHIVES:** Includes 'Document type' (InvoiceArchives), 'Archive file type' (Merge to single pdf), 'PDF Compression level' (None), and 'Separation value for CSV file' (Comma).

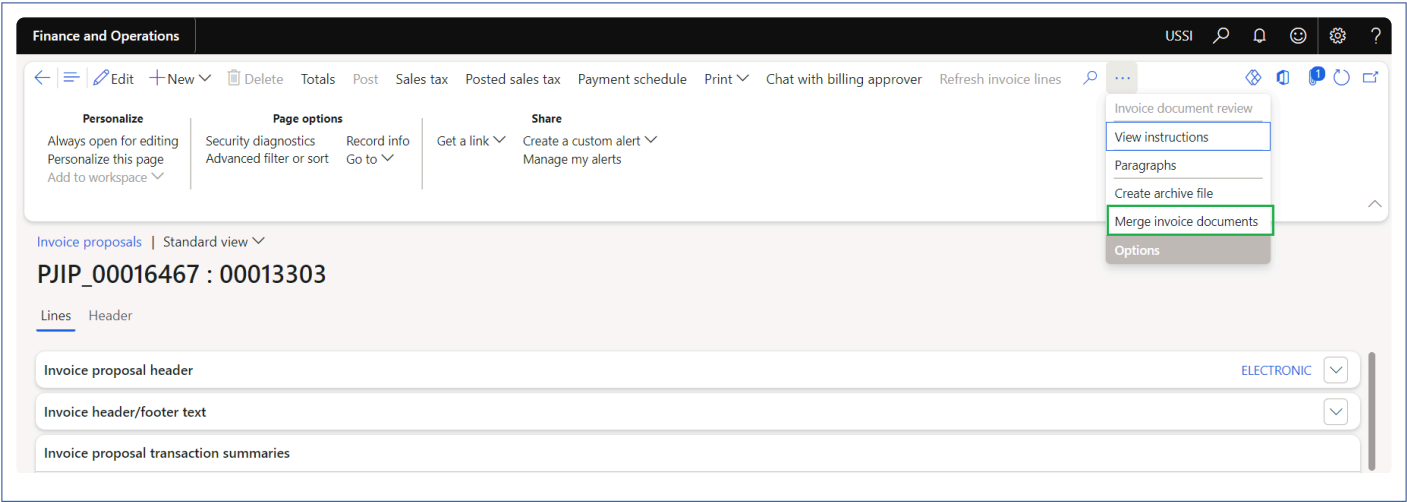

Details of the fields available for the Merge invoice documents parameter are as follows –

Fields	Description
Activate merge invoice documents	Set this parameter to Yes, to activate the merge invoice document feature.
Document type	Select document type for merge invoice documents.

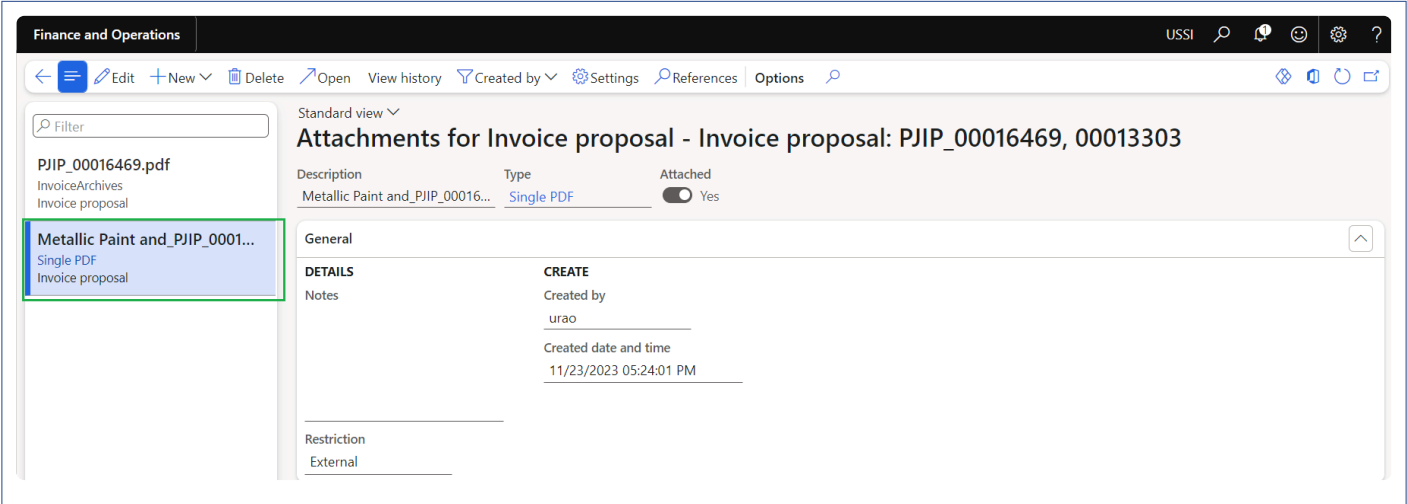

Merge invoice documents

New option is provided to merge all the invoice documents manually once the project invoice is posted. When try to post the invoice with email functionality, all the documents are merged automatically and attached on the email.

Go to *Project management and accounting > Projects > Project invoice proposal > Select posted invoice proposal*

Once the Merge invoice documents is clicked, an consolidated pdf will be generated with Invoice report and invoice archive documents using the document type defined in the parameter.

Invoice Email

The Invoice emailing feature helps users mail the invoice during posting of the invoice, with the details of the invoice in the text with an attachment. It also helps the user to open, view and download the attachment to the invoice, if any.

This feature allows the user to resend the email for the invoice. To reduce the number of steps and shorten the process, this feature has been introduced, where the invoice shall be saved as a pdf and then by selecting a checkbox the mail will be sent to the pertinent contacts.

Configure Email

* This section explains the setups required to be completed in order to use the Invoice emailing feature effectively. The setups part of this section are Project Parameters setup, Email address setup in Project contract and Email Template.

Parameter Setup

A new group “Invoicing Emailing” is added to the projects360 parameter form to configure the emailing of invoices.

Go to Projects management and accounting > Setup > projects360 parameters > Invoicing tab.

Go to Project billing > Setup > Billing parameters > Emailing tab.

The following fields are available under the Invoicing emailing group:

- Email template: This is a drop-down field displaying the list of all the email template IDs setup in Email template form under Organization Administration.
- Email provider: This is a drop-down displaying all email providers which is selected in email parameters form as enabled interactive email providers. This is used to send emails from the application.
- Email attachment: Select this option to attach the invoice to an email, with the details including the legal entity and the invoice number, along with the other details of the invoice.
- Attach as PDF: Select this check box to attach the invoice itself as a pdf file on the invoice journal,. If the check box is set a No then there will be no attachment on the Invoice journal form. The PDF file is

attached to the invoice journal with the invoice number, customer name and followed by legal entity.

Email Address setup in Project Contract

A new fast tab Invoice emailing is added to the funding source details form in a Project contract. The following fields are added to the Fast Tab.

Go to Projects management and accounting > Project Contract > Select Project Contract ID > Details on Funding Source tab

Go to Project billing > All invoices > Project Contract > Select Project Contract ID > Details on Funding Source tab

The screenshot shows the 'Funding source details' form in Dynamics 365 Finance and Operations. The form is divided into several sections: General, Address, Payment, and Invoice settings. The 'Invoice settings' section is highlighted with a red box. It contains an 'EMAILING' section with 'To' and 'Cc' email address fields, a 'Default invoice header text' field, and an 'Invoice format' dropdown set to 'Invoice grouping'.

General			
Project contract ID	Funding source ID	Funding type	Customer
00000103	Active Transport I	Customer	US_SI_0002

Invoice settings	
EMAILING To demo@contoso.com Cc demoAX@contoso.com	Default invoice header text Invoice format Invoice grouping

Details of the fields available are as follows:

- **To:** Specify the email address of the funding source(s), when you post the invoice. This setup is mandatory for the emails to flow from the application. You can include multiple email IDs in this field, with a semi colon separating each of the email IDs.
- **CC:** Specify the email address of any other source, or contacts that you want to send the copy of the invoice. You can include multiple email IDs in this field, with a semi colon separating each of the email IDs.

Email Template

Setup the template for the project invoice email in in the Email templates form.

Go to Organization administration > Setup > Email templates.

Go to Project billing > Setup > Organization email templates.

Below are wildcards\string fields that can be used in the email template. These wildcards will be replaced by

Copyright © 2024 HSO | ProServ

Page 797 of 981

the actual values during the run-time for each document emailed.

Wildcards	Actual value
ProjInvoiceId	Invoice ID of the selected document
InvoiceDate	Invoice date of the selected document
InvoiceAmount	Invoice amount of the selected document
CurrencyId	Currency ID of the selected document
CustomerName	Customer name of the Invoice account of the Project invoice
DueDate	Due date of selected project invoice
PMIPPONumber	PO number from Project invoice
PMIPServiceDateFrom	Service date from of Invoice proposal
PMIPServiceDateTo	Service date to of Invoice proposal
PSAInvoiceTxtPre	Invoice text from Invoice proposal
Customerrequisition	Customer requisition number from project contract
Customerreference	Customer reference number from project contract

Print Management Setup

In order to send the invoices as an attachment in the email, we need to setup the print management. Perform the below steps in order to send the reports as attachments in email.

Go to Project management and accounting > Setup > Forms > Form setup > Print management button

Go to Project billing > Setup > Form setup > Print management button

The screenshot shows the 'Print management setup' form in the 'Finance and Operations' module. The left sidebar lists various document types, with 'Project invoicing' expanded and 'Original <Default>' selected. The main form area shows settings for 'Original / copy' (set to 'Original'), 'Name' (set to 'Original'), and 'Suspend printing for this document' (set to 'No'). The 'DEFAULT SETTING' section is checked. The 'Destination' section shows 'Archive: Unavailable'. The 'Report format' is set to 'PMIPPSAProjInvoice.PMIPProjectInvoicing'. The 'Number of copies' is set to '1'. The 'Footer text' field is empty. The 'Print destination settings' window is open on the right, showing a list of destinations: 'Print archive', 'Screen', 'Printer', 'File', and 'Email'. The 'Save in print archive?' checkbox is checked.

Once you are on the print management setup form, select the Project invoicing option and expand it. Once expanded again select original <Default>. Click on the destination button to open the print destination settings window, select Screen and mark 'Yes' to the save in print archive? checkbox as shown in the above visual.

Note – if the ER report format is selected on print management setup, then same will be used to send email.

Emailing Invoices

This section explains the process of emailing invoices to the email ID's configured on the funding sources using the template configured on the email template form.

Using the Invoice Email Feature

The following fields have been added to the Post invoice proposal form, which populates information based on the setup done on the projects360 parameters form, as described in the Parameter setup section. Use print management destination will be by default marked when “Email attachment” parameter is turned on on the parameters form. You can modify the fields on invoice proposal form and process the invoice proposal.

Based on the set up, the email for the project invoice is generated and sent successfully, when

- The Print invoice check box is selected. Once the Print invoice check box is selected, “Email attachment” and “Attach PDF” fields will get defaulted from the parameters and user can modify the same. If the Print invoice check box is not selected “Email attachment” and “Attach PDF” fields will be disabled.
- The Email attachment is marked.

The email displays the details of the invoice in text and contains the PDF file of the invoice as an attachment. You can click Add to add more attachments, if required.

The attachment to the mail has the name of the customer, legal entity, and the invoice number as a naming convention.

Note – Print archive is required for the projects360 emailing to work. In case if you are not using the 'Use print management destination' then, use the 'Printer setup' option available as tab on the post invoice proposals form to manually set 'Print archive' to Yes.

When the ER report is set as report format, then ER report is being sent through Invoice email functionality using same parameter setup.

Changes incorporated for the Email Invoice

The following changes have been made in the listed forms, to allow the user to make optimum use of the invoice emailing feature.

Form Name	Navigation	Fields groups\Fields added
Project invoice list page	Project management and accounting > Project invoices > Project invoices	<ul style="list-style-type: none"> • Invoice sent electronically field • Email sent date field • Resend email button • Download attachment button
Contract open invoices form	Project management and accounting > Accounts receivable > Contract open invoices	<ul style="list-style-type: none"> • Open attachments button • Download attachments button • Re-Send mail
My open invoices form	Project management and accounting > Accounts receivable > My open invoices	<ul style="list-style-type: none"> • Open attachments button • Download attachments button • Re-Send mail

Field descriptions on the form are as follows:

- Invoice sent electronically: If the invoice is sent in the email, the invoice sent electronically field displays Yes.
- Email sent date: The project invoice record displays the date on which the email for the invoice is sent. If the user has resent an email, then the Email sent date reflects the date the email is resent.
- Open attachment button: Allows the user to open and view the attachment for the record, if any, for the selected invoice record.
- Download attachment button: Allows the user to download the attachments, if there are any for the selected invoice record.
- Re-send email button: Allows the user to resend the email for the selected invoice. It also allows the user to select more than one invoice as an attachment.

Accounts Receivables by Projects

Aging report is a periodic report that categorizes a company's accounts receivable for the length of time an invoice has been outstanding for project transactions. Though Dynamics 365 for Finance and Operations does have a collections management in the Accounts receivable module, to trace the transactions right from Project Management and Accounting module is not developed fully.

New report has been developed to display the customer aging by project through Customer aging by project report where the invoice balances will be displayed per project.

Setup and Run Aging

✿ This section details out the setups required to perform the aging process and how the aging snapshot process is run for project transactions/invoices.

Parameter Setup

This feature is not controlled by a parameter. However, the aging periods by which the AR aging list page has to be specified on the parameters form. Using this parameter, a periodic report is generated that categorizes a company's accounts receivable as per the length of time an invoice has been outstanding.

Go to *Project management and accounting > Setup > projects360 parameters*

Fields	Description
Aging period definition	This value defaults on aging snapshot form.
Accounts receivable by project	When this parameter is activated, customer balance will be posted per project. if the parameter is not activated customer balance will be updated per customer.
Activate AR collection notes	When this parameter is activated, collection notes can be created for each invoice and history can be maintained.

Accounts receivable balance per project

When the invoice is posted for the multiple projects, Accounts receivable balance will be posted per project. This will be controlled through parameter 'Accounts receivable balance per project' when activated, customer balance along with the adjusted taxes will be posted per project.

180 and over: 1,787.50

Details of the buttons used on the form are follows:

Fields	Description
Show invoice	Displays the invoice when a line is selected, for multiple selections this button is disabled.
Open Attachment	Allows the user to open and view the attachment for the record, if any, for the selected invoice record.
Download attachment	Allows the user to download the attachments, if any, for the selected invoice record.

Collections	This menu button allows the user to view collection history, view collection details, view customer aged balances and create AR collection notes.
Re-send email	Allows the user to resend the email for the selected invoice. It also allows the user to select more than one invoice as an attachment.

Details of the filters used on the form are follows:

Fields	Description
Aging definition period	Based on the ageing definition period, the transactions will be displayed on the the form. This field defaults from the projects360 parameters. User can change the aging defined period is required
Due date filter	Due date start and Due date end dates are available for the filters and the records in the list should be filtered accordingly.
Last updated.	Last batch-run Date and time will be seen. It will get updated based on the batch-run.
Currency Type.	Accounting and Transaction currencies are the options available for selection. Based on the selection, the amounts in the buckets will change.
Include non-project transaction checkbox.	Select Include non-project transaction checkbox to include the non-project transactions. It will display Project as well as non-project invoice/transactions.
	Un-marking of Include non-project transaction checkbox will not include the non-project transactions. It will display only project transactions.

Details of the fields used on the form are follows:

Fields	Description
AR collection notes	View the AR collection notes created for the selected invoice.
Customer Name	View the customer name for each invoice line.
Contract name	View the name of the contract related to the invoice.
Project name	View the name of the project related to the invoice.
Billing Approver	User can view the billing approver for this transaction line.
Invoice	View the Invoice number.

number	
Invoice date	View the date of the invoice.
Due date	View the due date that is being calculated on the customer transactions, as per the payment terms associated with the customer.
Currency	Depends on the Include non-project transaction check box selected at the header of the form.
Invoice amount	Depending on the check box selected at the header of the form the transaction amount will be either shown in transaction currency or in the company currency.
Amount Open	Amount remaining to be paid by the customer will be shown in transaction currency.
Amount Open(USD)	View the remaining amount to be paid by the customer shown in company currency.

Details of the fields used on the fact box are follows:

Fields	Description
Customer ID	View the identification of the customer for each invoice line.
Contract ID	View the identification of the contract related to the invoice.
Project ID	View the identification of the project related to the invoice.
Invoice number	View the Invoice number.
Aging buckets	<ul style="list-style-type: none"> The aging bucket defined on the Project parameters under this feature group is considered for display and is divided by periods defined in the aging buckets setup in the accounts receivable module. The amount open/remaining to be paid, will be displayed in the respective aging bucket based on the age of the amount due, which is calculated based on the invoice date or due date as defined while batch-run. The amount open will be displayed in the currency either company or transaction based on the toggle parameter on the form.
Note	Displays the notes from the customer transaction table. There could be multiple notes in the customer transaction table, but will display only the most recent one on this field.

My Open Invoice

For Project managers/Billing approvers to find the invoices which they are responsible for, in this list page, only project invoices will be displayed.

This list page can be opened from the project contract form and project form by click on the “Open invoices” button. User can view all the invoices of parent and subprojects as well.

- Project contract form on the Maintain tab > Bill > Open Invoices.
- Projects form on the Manage tab > Bill > Open Invoices.

Go to *Project management and accounting > projects360 > Accounts receivable > My open invoices.*

Go to *Project billing > My invoices > Open invoices for my contracts.*

The screenshot displays the 'My open invoices' interface. At the top, there's a navigation bar with 'Finance and Operations' and a breadcrumb trail: 'Project management and accounting > projects360 > Accounts receivable > My open invoices'. Below this, there are tabs for 'Show invoice', 'Open attachments', 'Download attachments', 'Collections', 'Re-send email', and 'Options'. A 'Personalize' section on the left allows users to customize the page. The main area shows a table of invoices with columns: AR collection notes, Customer name, Contract name, Project name, Invoice number, Invoice date, Due date, Currency, Invoice amount, Amount open, and Amount open (USD). The table is filtered by 'Aging period definition' (30, 60, 90, 180) and 'Due date start' and 'Due date end'. The right sidebar contains 'Related information' including Contract ID, Customer ID, Project ID, and Invoice number. Below this, an 'Aging' section shows the current aging period and the amount open for each period.

AR collection notes

AR collection notes

Users have the ability to create 'AR collections notes' improving communication between Project Managers and Project Accountants. Tracking information such as 'Created date/time' and 'Created by' is stored allowing only the creator to modify or delete his/her own notes. These notes are also available from standard 'Collection details' form.

Project managers also have the ability to view collection history, Collection details and Customer aged balances. These are the standard buttons available on 'Customers' form which are now added on the 'Contract open invoices' and 'My open invoices' forms for quicker access of collection details.

Go to Project management and accounting > Project360 > Accounts receivable > Contract open invoices > Collections.

Go to Project management and accounting > projects360 > Accounts receivable > My open invoices > Collections.

The screenshot displays the 'Contract open invoices' interface. At the top, a navigation bar shows the path: Finance and Operations > Project management and accounting > projects360 > Accounts receivable > Contract open invoices. Below this, a toolbar includes buttons for 'Show invoice', 'Open attachments', 'Download attachments', 'Collections' (with a dropdown), 'Re-send email', and 'Options'. The 'Options' dropdown is currently open, listing 'View collections history', 'Collection detail', 'Customer aged balances', and 'AR collection notes'. The main content area is titled 'Contract open invoices' and 'My view (1)'. It features a table with columns: AR collection notes, Customer name, Contract name, Project name, Billing approver, Invoice number, Invoice date, and Due date. One row is visible for 'Active Transport Inc.' with contract 'SADJ - Sales Price Std' and invoice '00000483'. To the right, a 'Related information' sidebar provides details for the selected invoice, including Customer ID (US_SI_0002), Contract ID (00001180), Project ID (00000447), Invoice number (00000483), and Aging information (Current: 0.00, 30 days: 0.00, 60 days).

The following are the available buttons:

Fields	Description
View collection history	This is a standard form which displays the collection history of the selected invoice.
Collection detail	This is a standard form which displays the collection details form for the selected invoice.

Customer aged balances	This is a standard form which displays the aged balances for the selected customer.
AR collection notes	Displays the AR collection notes created for the selected invoice.

The AR collection notes menu button is added where project managers can create ‘AR collections notes’ for each invoice.

Fields	Description
Created date and time	Displays the created date and time of the AR collection note.
Created by	Displays the user who created the AR collection note.
Invoice number	Displays selected invoice number.
Voucher number	Displays selected voucher number.
Note	Allows users to update the notes for the selected invoice.

Also, ‘AR collection’ and ‘Settlement history’ buttons are added on Collection details form.

Details of the buttons used on the form are follows:

Fields	Description
Show invoice	Displays the invoice when a line is selected, for multiple selections this button is disabled.
Open Attachment	Allows the user to open and view the attachment for the record, if any, for the selected invoice record.

Download attachment	Allows the user to download the attachments, if any, for the selected invoice record.
Collections	This menu button allows the user to view collection history, view collection details, view customer aged balances and create AR collection notes.
Re-send email	Allows the user to resend the email for the selected invoice. It also allows the user to select more than one invoice as an attachment.

Details of the filters used on the form are follows:

Fields	Description
Contract invoice status	This filter presents users with three options: All invoices, open invoices, and settled invoices. Users have the flexibility to filter invoices according to their desired status.
Start date	By default, it displays invoices from 90 days prior to the end date, which corresponds to today's date.
End date	By default, it shows today's date.
Currency Type	Accounting and Transaction currencies are the options available for selection. Based on the selection, the amounts in the buckets will change.
Include non-project transaction checkbox	Select Include non-project transaction checkbox to include the non-project transactions. It will display Project as well as non-project invoice/transactions.
	Un-marking of Include non-project transaction checkbox will not include the non-project transactions. It will display only project transactions.

Details of the fields used on the form are follows:

Fields	Description
AR collection notes	View the AR collection notes created for the selected invoice.
Customer Name	View the customer name for each invoice line.
Contract name	View the name of the contract related to the invoice.
Project name	View the name of the project related to the invoice.
Billing Approver	User can view the billing approver for this transaction line.

Invoice number	View the Invoice number.
Invoice date	View the date of the invoice.
Due date	View the due date that is being calculated on the customer transactions, as per the payment terms associated with the customer.
Currency	Depends on the Include non-project transaction check box selected at the header of the form.
Invoice amount	Depending on the check box selected at the header of the form the transaction amount will be either shown in transaction currency or in the company currency.
Paid Amount	Such amount indicates invoices which are fully paid by the customer.
Open Amount	Such amount indicates invoices which are not fully paid or partially by the customer.

Details of the fields used on the fact box are follows:

Fields	Description
Customer ID	View the identification of the customer for each invoice line.
Contract ID	View the identification of the contract related to the invoice.
Project ID	View the identification of the project related to the invoice.
Invoice number	View the Invoice number.
Note	Displays the notes from the customer transaction table. There could be multiple notes in the customer transaction table, but will display only the most recent one on this field.

My contract invoices

My contract invoices form specifically highlights project invoices for which the logged-in user holds the role of Project Manager.

Go to Project management and accounting > projects360 > Accounts receivable > My contract invoices.

Note

Note – Above forms are updated automatically as soon as Invoice/Payment is posted and executing AR aging snapshot is not required.

Credit note creation

Currently in Microsoft Dynamics 365 for Finance and Operations, Invoice proposal creation for the credit note transactions are manual. This feature provides user the ability to mark and create invoice proposal automatically for credit note transactions. This feature is controlled by the parameter.

Configure and create

✿ This sections details the process of auto creation of invoice proposal for credit note transaction.

Parameter Setup

On projects360 parameter form, under Invoicing tab, a new parameter “Credit notes auto-create invoice proposals” has been introduced to create invoice proposal automatically for credit note transactions. User needs to set the ‘Credit notes auto-create invoice proposals’ field value to ‘Yes’ in order to use this feature.

Go to *Project management and accounting > Setups > projects360 Parameters > Invoicing Tab.*

Credit notes auto-create invoice ...

Auto create invoice proposal

On select for credit note form, new parameter “Auto-create invoice proposal” is introduced where when the user select transactions for credit note and mark this parameter, automatically project invoice proposal with credit note transactions get created.

Once the project invoice proposal gets automatically created for credit note transactions message displayed with the project invoice proposal ID for user to easily identify the project invoice proposal created.

Note – Currently, When the credit note is created with billing rules, On-Account transactions are not considered for creating credit note proposal from this place, use standard function for it.

Misc changes

Proforma invoices clean up

New periodic job “Proforma invoices clean up” is introduced to remove stuck “Proforma” invoices in tables. When the user execute the Proforma invoices clean up batch process, the process will search for the stuck invoices and remove from the respective tables.

Go to Project management and accounting > projects360 periodic > Proforma invoices clean up

?

Reporting Enhancements

The features enhanced or newly created, relating to reporting have been grouped together in this document. The projects360 features grouped together in this section are as follows:

[Business Intelligence Tool](#)

[WBS Forecasts](#)

[Fixed Price Forecast Revenue](#)

[Reclد Enhancements](#)

[projects360 Workspaces](#)

Select a feature to view more details about them.

Business Intelligence Tool

Business Intelligence Tool provides the setup for the all the reporting data, where the efficiency, billability of an employee and accumulated result at the project level can be tracked. The utilization can be controlled per project, per category, and per posting profile.

This feature has been added to regroup the reporting transactions data and to view the utilizations based on estimated capacity of resource. The grouping is made at posting type level of all transactions where the resource is used. This feature is not parameter driven as most of the other projects360 features.

Configure

✳ Before grouping the reporting transactions based on parameters, the grouping parameters need to be defined. This section details how to configure the grouping parameters.

Parameter Setup

On projects360 parameters, new parameter is placed based on which the utilization target will get calculated.

Go to *Project management and accounting > Setup > projects360 parameters*

Working times

Standard work day hours

Working times

The options available for field Utilization target calculation method on this form are as follows:

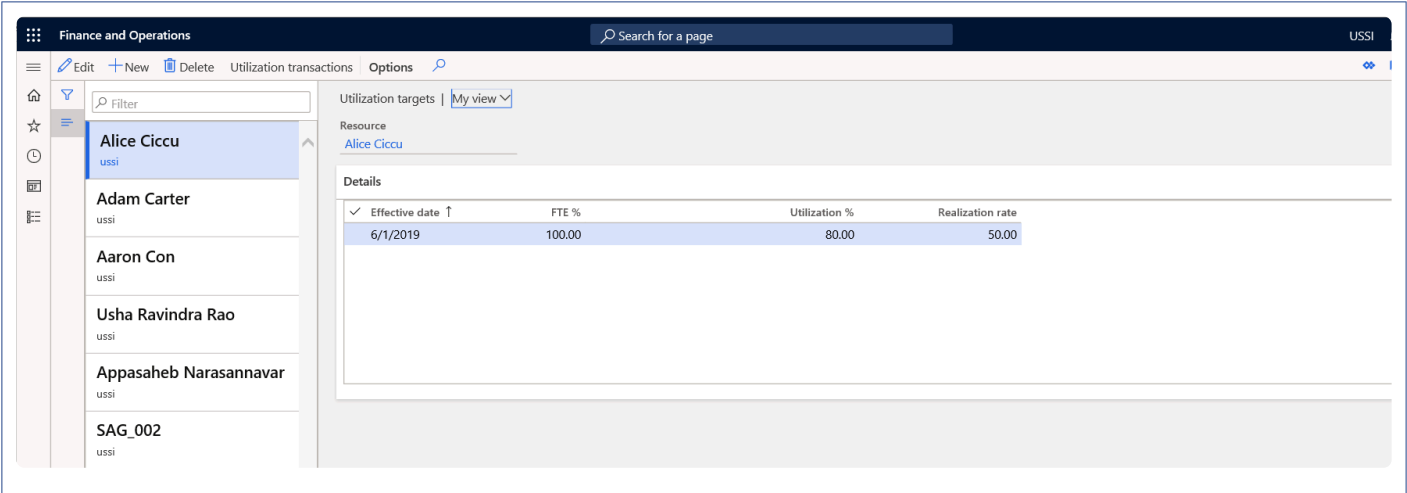

Field\Button name	Description
Standard work day hours	If this option is selected then utilization target will be calculated using “Standard work day in hours” field from calendar.
Working times	If this option is selected then utilization target will be calculated using the “Working time” for the specific date.

Utilization Setup

The following setups are required for Utilization in BI to work.

Go to Project management and accounting > Setup > projects360 BI Setups > Utilization Targets

Go to Resourcing > Utilization and BI > Utilization Targets

The user can define the utilization percentage of current legal entity resources in this form which will be used for utilization analysis based on the effective date. Resource manager and HR assistant will be able to create utilization targets whereas project supervisor will be allowed to view the created utilization targets.

The user can define the utilization percentage of current legal entity resources which will be used for utilization analysis based on the effective date from the workers form. Employment date/time and Legal entity time zone plays an important role in target utilization calculations. It is upto the user intelligence to update an unambiguous dates in employment history.

The user can define the utilization percentage of current legal entity resources which will be used for utilization analysis based on the effective date from the workers form.

The buttons and the fields available on this form are as follows:

Field\Button name	Description
New	Click to create a new utilization targets.
Delete	Click to delete an existing utilization targets.
Name	View the name of the resource.
Resource lookup	View the Resource for the utilization. This field is un-editable.
Effective date	The date from which the utilization data will be valid until the next nearest future date in the grid.
FTE %	This is the Full Time employment percentage of an employee. The percent entered in this field will be multiplied with the calendar hours of the resource. For example if the resource is attached to a 8 hours calendar and this field has 75%, then the target utilization of this

	resource is $8 \times 75\% = 6$ hours.
Utilization %	The productive percentage of the Resource. This is calculated on the FTE value. For example if the FTE is 6 hours and the percentage in this field is 85, then the Utilized percentage on a day basis will be $6 \times 85\% = 5.10$ hours.
Realization rate	This is a user keyin field to calculate realization amount.
Utilization transactions button	Utilization transaction button has been added on Target utilization form to view the values calculated in hours for FTE% and Utilization% per day along with the role information.

Utilization Transaction

This button is added on the Utilization targets form to display resource utilization transaction with resource role for a specific day.

Work day	Role	Target total	Target utilized	Currency	Realization rate	Realization amount
6/3/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/4/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/5/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/6/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/7/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/10/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/11/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/12/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/13/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/14/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/17/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/18/2019	Project manager	8.00	6.40	USD	50.00	320.00
6/19/2019	Project manager	8.00	6.40	USD	50.00	320.00

The buttons and the fields available on this form are as follows:

Field name	Description
Workday	Date of the utilization target of the resource.
Role	Role field displayed the resource role for respective date.
Target total	Target total displays the target total based on given value on FTE%. Based on the date effectivity and the percentage change the target total will vary.
Target Utilized	Resource utilization hour displayed in the target utilized field. This is the Utilization hours of the FTE Hours. Based on the date effectivity and the percentage change the target Utilized will vary.

Realization rate	Realization rate field value will default from the Utilization target form.
Realization amount	Realization amount is the amount calculated by multiplying the Realization rate with target utilized hours.
Financial dimensions	In the financial dimensions tab, all the financial dimensions associated with the worker is defaulted.

Utilization Type

In this form the project transaction data is classified into various utilization buckets per Project, per category and further by line property. This setup will be used for calculation of utilization at the project level. Resource manager and HR assistant will be able to create utilization targets whereas project supervisor will be allowed to view the created utilization types.

Go to *Project management and accounting > Setup > Project+ BI Setup > Utilization types*.

Go to *Resourcing > Utilization and BI > Utilization type*

The screenshot displays the 'Utilization type' form in Dynamics 365. The breadcrumb navigation shows: Dynamics 365 > Finance and Operations > Project management and accounting > projects360 BI Setup > Utilization type. The form includes a 'Filter' input field and a table with the following data:

Valid for	Project relation	Valid for	Category relation	Line property	Utilization type	Utilization name
Table	00000001	Table	AppDev	None	Utilized (bill)	UB
Group	TM_WIP	Table	AppDev		Utilized (non-bill)	UNB
Group	TM_WIP	Table	Consult		Non-utilized (Client)	NUC
Group	TM_WIP	Table	Design		Non-utilized (PTO)	NUPTO
Group	TM_WIP	Table	Development		None	
Table	00000003	Table	ITConsult		Utilized (Internal)	
Group	Capital	All			Non-utilized (Internal)	
Group	Internal	All			Non-utilized (PTO)	
Group	PTO	All			Utilized (bill)	
Group	TM_WIP	All			Utilized (bill)	
Group	FixedInv	All		Billable	Utilized (bill)	
Group	FixedPC	All		Billable	Utilized (bill)	
Group	FP_WBS	All		Billable	Not-included	
Group	T&M	All		Billable	Utilized (bill)	
Group	FixedInv	All		NonBill	Utilized (non-bill)	
Group	FixedPC	All		NonBill	Utilized (non-bill)	
Group	T&M	All		NonBill	Non-utilized (PTO)	

The buttons and the fields available on this form are as follows:

Field name	Description
New	Click to create a new utilization type.
Delete	Click to delete an existing utilization type.
Update utilization type history	Click to update the data as per the changes done to the form. This button remains disabled unless there are any edits to the form.

Valid for	The options available here are – Table, Group and All. When set to group or table, the project relation has to be selected. This field works in conjunction with the Project Relation field.
Project Relation	This field is non-editable, when the option in Valid for is set to All. The Project groups are displayed for selection when the Valid for field is set to Group. The Projects are displayed for selection when the Valid for field is set to Table.
Valid for	The options available here are – Table, Group and All. When set to group or table, the project relation has to be selected. This field works in conjunction with the Category Relation field.
Category relation	This field is non-editable, when the option in Valid for is set to All. The Category groups are displayed for selection when the Valid for field is set to Group. The Project categories are displayed for selection when the Valid for field is set to Table.
Line property	Line property can be selected as another criteria for the utilization calculation.
Utilization type	There are fixed 8 types of utilization classifications available in projects360. They are: None, Utilized (bill), Utilized (non-bill), Utilized (Internal), Non-utilized (Client), Non-utilized (internal), Non-utilized (PTO) and Not-included. Based on the values the utilization calculations will be performed for the projects/categories selected in the line. For example the if the line is for Project1 and category relation is set to ALL and the utilization type is set to – Non-Utilized (Internal). Then all the transactions on this project will be grouped as Non-Utilized (Internal).
Utilization name	Utilization name can be defined to further classify the Utilization types.

This form is used to group categories in combination to projects into different types of utilization group. For example, Corporate social responsibility under project Internal should be treated as non-Utilized internal, paid Leave, etc.

Transaction Group

The posting types are grouped together along with a category or otherwise, into a broader classification as labor, expense, revenue etc., for the purpose of calculating the utilization.

Go to Project management and accounting > Setup > projects360 BI Setup>Transaction Groups.

This form is used to regroup postings of different transaction types in combination with categories into various transaction group.

The buttons and the fields available on this form are as follows:

Column name	Description
New	To create a new Transaction Group.
Delete	To delete an existing Transaction group.
Transaction Update group history	To update the data as per the changes done to the form. This button remains disabled unless there are any edits to the form.
Posting Type	All posting types in Microsoft Dynamics 365 for Finance and Operations, is available for selection in this lookup.
Transaction Type	The various project transaction types are displayed for selection in this list. Transaction types available are Blank, Fee, Hour, Expense, Item, OnAccount, WIP, Indirect cost component and Retainage.
Category	The category that should be used. to filter for the given transaction type.
Transaction group	There are 7 types of transaction groups available for selection. None, Expense, Labor, Revenue, Offset, On-Account and WIP.

Inquire Utilization Data

* This section explains how the transaction data is inquired and verified based on the grouping parameters defined in the previous section.

Utilization Inquiry

Once the grouping parameters are defined, post the various projects transaction types such as hours, fees, items, expenses etc. These transactions will be grouped based on the setups and can be viewed on the ledger updates form.

Utilization data classified based on the setups in Utilization types and transaction groups for the posted transaction is available in the Posted Project Transactions form.

Two new tabs on view ledger update under posted transaction form show the utilization type transaction and utilization group for posted transaction.

Go to *Project management and accounting > Transactions > Posted Projects transactions > View ledger updates*

WBS Forecasts

Microsoft Dynamics 365 for Finance and Operations does not have any provision for calculating or displaying the earned values or planned values in a forecast model. It does not even have the estimate to complete calculations.

WBS (Work break down structure) lines are considered as the source for calculation of planned value and other calculations related to earned and estimated to complete forecasts.

The following forecasts are generated using WBS as the basis.

Planned Value

Earned Value

Estimate to Complete

Configure Forecasts

* There are few setups required to generate the forecasts based on WBS lines created for a particular project. This section details out these setups.

Parameter Setup

There is a setup on the projects360 parameters form, which allows users to select the different forecast models to generate the planned, earned and estimate to complete forecasts. This is drop-down field allowing users to select a value from the forecast models defined on the standard form.

Go to Project management and accounting > Setup > projects360 Parameters > Work Breakdown Structure Tab

The screenshot displays the 'Projects+ parameters' form in Dynamics 365. The navigation pane on the left includes 'Invoicing', 'Work breakdown structure' (selected), 'Resourcing', 'Timesheets', 'Transactions', and 'Qualification'. The main content area is titled 'Set up parameters for work breakdown structure'. It contains two sections: 'WBS FORECAST' and 'WORK BREAKDOWN STRUCTURE'. The 'WBS FORECAST' section has three dropdown menus: 'Planned value' (set to 'Plan'), 'Earned value' (set to 'Earned'), and 'Estimate to complete' (set to 'ETC_WBS'). The 'WORK BREAKDOWN STRUCTURE' section has a toggle for 'Activate work breakdown structure' set to 'Yes'.

Details of the forecasts models selected against each of the fields are as follows:

- **Planned Value:** The forecast model selected in this field will hold the forecasts line created from the WBS line for planned value into this forecast model.
- **Earned Value:** The forecast model selected in this field will hold the forecasts line created from the WBS line for earned value into this forecast model.

- **Estimate to Complete:** The forecast model selected in this field will hold the forecasts line created from the WBS line for estimate to complete into this forecast model.

Forecast Model Parameters

There are a couple of parameters available on the standard forecast form, for copying the lines from WBS to the planned values. These parameters also help in deciding whether the forecasts to be generated in days, weeks, month or total.

The screenshot displays the 'Forecast models' form in Dynamics 365 Finance and Operations. The form is titled 'Forecast models' and includes a search bar and a filter. The left sidebar shows a list of forecast models: ACCREV, CarryFwd, Earned, ETC_WBS, O_forecast, Original, Plan, and R_Forecast. The main form area contains several sections for configuring the forecast model parameters. The 'Project' section includes 'Forecast Invoice Date', 'Budget Type', 'Forecast with WIP', and 'Automatic Forecast Reduction'. The 'Require Sufficient Remaining Budget' section includes 'Hour', 'Expense', and 'Item'. The 'Calculate Pricing on Forecast Update' section includes 'Cost price' and 'Sales price'. The 'Forecast Lines Group By' dropdown is open, showing options: Week, Day, Week, Month, and Total. The 'Calculate Pricing on Forecast Update' section is highlighted with a red box, showing 'Cost price' and 'Sales price' both set to 'Source transaction'.

- Creating lines in the forecast model could be split based on the below options
 - Weekly
 - Daily
 - Monthly
 - Total: one single line for the entire value
- Pricing: cost price and sales price.
 - Source transaction: This option is for defaulting the price as it is on the WBS form.
 - Price table: The price here defaults from the pricing tables.

Process Forecasts

✿ This sections explains how the different types of forecasts are created using the work breakdown structure data.

Processing Forecasts

On the Work breakdown structure form, after entering the WBS data, the user can use the new buttons added on the Plan tab to move the Work breakdown structure lines into the respective forecast models for Planned value, earned valued and estimate to complete.

WBS lines can be verified on *Go to Projects management and accounting > Projects > All projects > Work breakdown structure* or *_Go to Manage projects workspace > Manage project tab> Work breakdown structure*

Dynamics 365 ▾Finance and OperationsProject management and accounting > Projects > All projects

Intelligent resource fulfilmentUpdate resourcing E

When the user chooses one of these buttons then a batch window opens where the user can process the records further. Details of how each forecast plan is updated is detailed in the below sections of the document.

Planned Value Forecasts

Planned value is the value that has been planned for executing the work breakdown structure tasks, so this is the baseline planned.

Go to Projects management and accounting > Projects > All projects > Plan tab > Update planned value forecast

Go to Manage projects workspace > Budgeting tab > Update planned value forecast

The user can edit only the task description and enable batch processing and its related information. Rest all the fields default from setups and not editable.

When the user runs the batch then the following data from work breakdown structure is considered for creating forecast lines, for the Forecast model ID that is selected in the parameters.

- Start date: From work breakdown structure line.
- Role ID: Value would be blank if the resource is not yet assigned to the work breakdown structure line.
- End date: From work breakdown structure line.
- Effort (hours): From work breakdown structure line.
- Cost price: Picked from work breakdown structure Line or from the price setup in project module
- Sales price: Picked from work breakdown structure Line or from the price setup in project module.
- Resource: Value would be blank if the resource is not yet assigned to the work breakdown structure

line.

Earned Value Forecasts

Earned value is the value that is forecasted to be earned till the current date, from the start date of the work breakdown structure line.

Go to Projects management and accounting > Projects > All projects > Plan tab > Update earned value forecast

Go to Manage projects workspace > Budgeting tab > Update earned value forecast

The screenshot displays the Dynamics 365 interface for project management. The background shows the 'PROJECTS' section for '00000212 : LMN24-Week WBS'. The 'Earned value' dialog box is open, showing the 'Parameters' tab. The 'EARNED VALUE' section has 'Earned value model' set to 'Earned'. The 'Records to include' tab shows a filter for 'PROJECTS' with 'Project ID' set to '00000212'. The 'Run in the background' tab shows 'Recurrence' and 'Alerts' sections. The 'Recurrence' section has 'Batch processing' set to 'Yes'. The 'Alerts' section has 'Task description' set to 'Earned value', 'Batch group' as a dropdown, 'Private' set to 'No', 'Critical Job' set to 'No', and 'Monitoring category' as a dropdown. The 'Start date' is '9/12/2017 (11:56:26 am) (GMT) Coordinated Universal Time'. There are 'OK' and 'Cancel' buttons at the bottom right.

When the user runs the batch then the following data from work breakdown structure is considered for creating forecast lines in the forecast model ID that is selected in the parameters.

- Start date: From work breakdown structure line.
- End date: Current/System date.
- Effort (hours): From work breakdown structure line.
- Cost price: Picked from work breakdown line or from the price setup in project module, based on the setup in forecast model.
- Sales price: Taken from work breakdown line or from the price setup in project module, based on the setup in forecast model.
- Resource: Value would be blank if the resource is not yet assigned to the work breakdown structure

line.

Estimate to Complete Forecasts

Estimate to be completed is the forecasted value that is required to complete the task from today. So, the current date is cut off till the end date of the work breakdown structure is considered for calculating the number of days. However, for the remaining effort, the value of remaining effort is considered from work breakdown structure form on the tracking view – hours effort.

Go to Projects management and accounting > Projects > All projects > Plan tab > Update estimate to complete forecast

When the user runs the batch then the following data from work breakdown structure is considered for creating forecast lines for the forecast model ID that is selected in the parameters.

- Start date: Current/system date.
- End date: From work breakdown structure line.
- Effort (hours): Remaining effort from Effort tracking in the work breakdown structure.
- Cost price: Taken from work breakdown structure Line or from the price setup in project module.
- Sales price: Taken from work breakdown structure Line or from the price setup in project module.
- Resource: Value would be blank if the resource is not yet assigned to the work breakdown structure

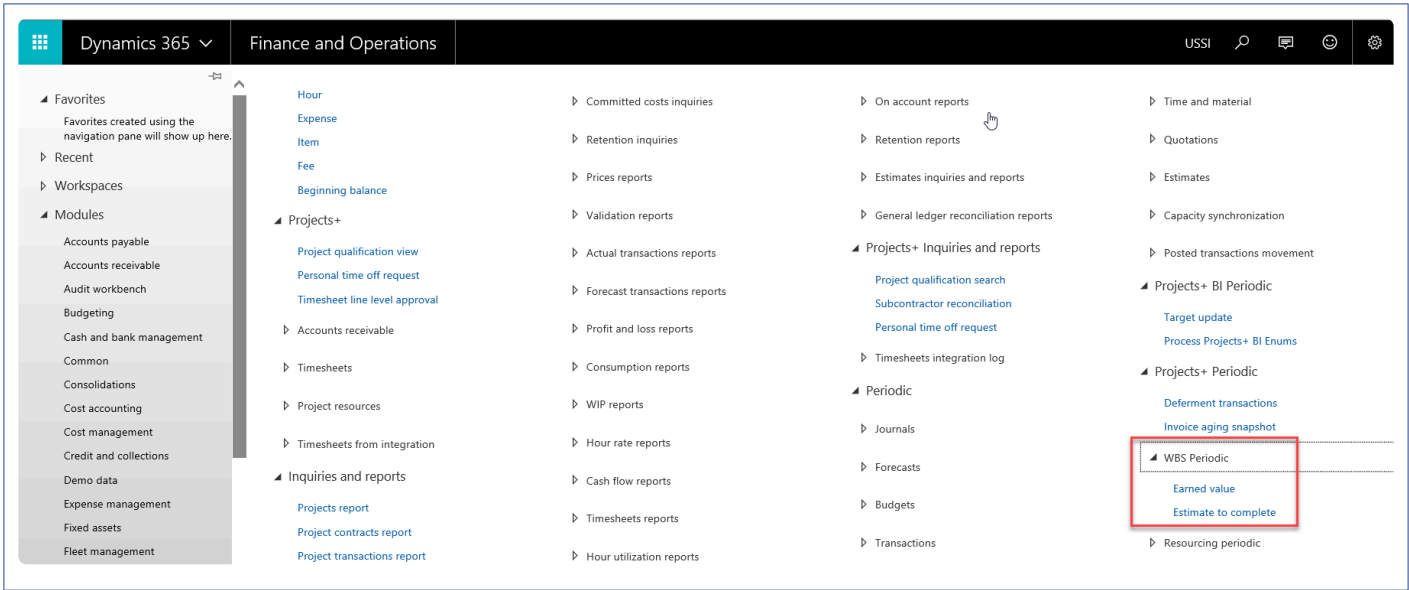

line.

In case a task is estimated for 20 days starting from June 1st to June 20th, When Update planned forecasts is executed, the forecasts will be created from June 1st to June 20th. When Update earned value forecast is executed on June 5th, the forecasts will be created from June 1st to June 5th. When Update estimate to complete value forecast is executed on June 5th, the forecast will be created from June 5th to June 20th.

Periodic Forecast Processing

The user can run the planned value only from the project however for the other two methods i.e. earned value and estimate to complete forecasts, periodic process menu can be used, which is available in the below path.

Project management and accounting > Periodic > projects360 Periodic > WBS Periodic

The functionality of the batches is the same as it is from the all projects menu, however in this form the batch can be run for one or more than one projects at a time.

Validate Forecasts

✿ This sections explains how the different types of forecasts results that are created using different methods are validated\reviewed using forms designed to represent this data.

Validate Forecast Results

Planned Value Results

The effort from work breakdown structure lines is divided into the open days between the start date and end date and are inserted as forecast lines. Each time the batch is processed, the previous data is deleted and new data is inserted.

00000212 : LMIN24-WEEK WBSHour forecasts - Forecast model: Plan, 8/15/2017

OverviewGeneralDatesResource requirementsSchedulingFinancial dimensions

✓	WBS ID	Task name	Forecast m...	Project date	Project ID ▾	Activity number	Category	Resource	Role ID	Description	Hours	Line property	Budget type ▾	Indirect cost co...
	1	PM	Plan	8/15/2017	00000212	W00004640	PM			Project Management	50.00	Billable	None	
	3	QA	Plan	8/15/2017	00000212	W00004642	PM			Project Management	80.00	Billable	None	
	2	Dev	Plan	8/15/2017	00000212	W00004641	PM			Project Management	100.00	Billable	None	

Earned Value Results

The effort above is divided into the open days between the start date and end date and are inserted as forecast lines. Each time the batch is processed, the previous data is deleted and new data is inserted.

The screenshot shows the Dynamics 365 interface for 'Hour forecasts - Forecast model: Earned, 8/15/2017'. The table displays forecast data for three tasks: PM, Dev, and QA, all with a forecast model of 'Earned' and a project date of 8/15/2017.

WBS ID	Task name	Forecast m...	Project date	Project ID	Activity number	Category	Resource	Role ID	Description	Hours	Line property	Budget type	Indirect cost co...
1	PM	Earned	8/15/2017	00000212	W00004640	PM			Project Management	50.00	Billable	None	
2	Dev	Earned	8/15/2017	00000212	W00004641	PM			Project Management	100.00	Billable	None	
3	QA	Earned	8/15/2017	00000212	W00004642	PM			Project Management	80.00	Billable	None	

Estimate to Complete Forecast Results

The effort above is divided into the open days between the start date and end date, and are inserted as forecast lines per worker, thus if there are 2 workers then the forecast lines, in case 10 are created, then two sets would be created. Each time the batch is processed, the previous data is deleted and new data is inserted.

The screenshot shows the Dynamics 365 interface for 'Hour forecasts - Forecast model: ETC_WBS, 8/15/2017'. The table displays forecast data for three tasks: Dev, PM, and QA, all with a forecast model of 'ETC_WBS' and a project date of 8/15/2017.

WBS ID	Task name	Forecast m...	Project date	Project ID	Activity number	Category	Resource	Role ID	Description	Hours	Line property	Budget type	Indirect cost co...
2	Dev	ETC_WBS	8/15/2017	00000212	W00004641	PM			Project Management	90.00	Billable	None	
1	PM	ETC_WBS	8/15/2017	00000212	W00004640	PM			Project Management	40.00	Billable	None	
3	QA	ETC_WBS	8/15/2017	00000212	W00004642	PM			Project Management	70.00	Billable	None	

In case a task is estimated on WBS for 20 days starting from June 1st to June 20th, When Update planned forecasts is executed forecast will be created from June 1st to June 20th. When Update earned value forecast is executed on June 5th forecast will be created from June 1st to June 5th. When Update estimate to complete value forecast is executed on June 5th forecast will be created from June 15th to June 20th.

Note – Only transaction of type hour has been considered for these calculations.

Fixed Price Forecast Revenue

This feature is applicable to fixed price projects. The limitation with Microsoft Dynamics 365 for Finance and Operations is that the revenue budget is not created the way it is in a Time and Material project while forecasting.

There is no revenue budget line created when the forecasts are created for a fixed price project and the same should be manually created. This functionality has been introduced.

Create & Review Forecasts

This sections details out the steps to configure the forecast models and generate the forecasts for fixed price kind of projects. This sections also explains from where to validate\ view the generated forecasts.

Configure Forecasts

Forecast Model Form

This feature is parameter controlled and the parameter lies in the Forecast model form. 'Accrue revenue on fixed price projects' needs to be turned on to generate forecasts for fixed price projects.

Go to *Project management and accounting > Setup > Forecasts > Forecast models*

Dynamics 365 Finance and Operations Project management and accounting > Setup > Forecasts > Forecast models

US\$1

Click the edit button to make changes.

Generate Forecasts

Once the parameter is turned on the forecast model and user creates a forecast line using this forecast model on a fixed price project then the revenue forecast line are automatically generated. To create a new forecast use the below form.

Go to *Project management and accounting > Projects > All projects > Plan tab > Hour forecasts*

Go to *Manage projects workspace > Budgeting tab > Hour forecasts*

00000630 : BUILD-002
Hour forecasts - Forecast model: **ACCNEW, 4/2/2018**

WBS ID	Task name	Forecast model	Project date	Project ID	Activity number	Category	Resource
1	Project Management	ACCNEW	4/2/2018	00000630	W00004874	PM	
2	Development	ACCNEW	4/2/2018	00000630	W00004875	ERPDev	
3	Quality Assurance	ACCNEW	4/2/2018	00000630	W00004876	QA	

Review Revenue Forecast Created

Once the forecast lines are created/forecasted on the hour forecast form, an automatic revenue forecast line is created. The revenue line created can be validated on the below form. This feature creates the revenue forecast lines for transactions of hour, expense and item types.

Go to *Project management and accounting > Projects > All projects > Plan tab > Hour forecasts > General ledger preview*

Go to *Manage projects workspace > Budgeting tab > Hour forecasts > General ledger preview*

ACCNEW : 4/2/2018
General ledger preview

Ledger date	Ledger account	Posting type	Amount type	Amount	Funding source
4/2/2018	411100	Project - invoiced revenue	Sales	42,000.00	Build0001
4/2/2018	602100	Project - payroll allocation	Cost	24,000.00	Build0001
4/2/2018	540100	Project - cost	Cost	24,000.00	Build0001

RecId Enhancements

There is no link with the transaction ID and its adjusted transactions for an inter-company or non inter-company transactions to easily track it back and report, so this customization has been formulated to ease reporting of such transactions.

The timesheet transaction record ID and the expense report transaction record ID is being copied to the hours transaction and expense transactions table to trace the origin of record. This feature is automatically enabled and not dependent on any parameter.

RecID Update

This section details out how the record ID's are created for different transactions and the tables which are updated with this information.

Timesheet

Non-Intercompany transactions: On the posting of a non-Intercompany timesheet transaction, 'timesheet transaction recId' is updated to the new field 'PMIPTimesheetRecId' in ProjEmplTrans table.

Intercompany transactions: On the posting of an intercompany customer invoice, 'timesheet transaction recId' is updated to the new field 'PMIPTSEXPRecId' in VendInvoiceInfoLine_Project table and then when posting the Intercompany vendor invoice, the record Id is then updated into the ProjEmplTrans table.

Expense Report

Non-Intercompany transactions: When posting an expense report, 'expense report transaction recId' is updated to the new field 'PMIPEXPRecId' in ProjCostTrans table.

Intercompany transactions: On posting Intercompany customer invoice, 'expense report transaction recId' is copied to the new field 'PMIPTSEXPRecId' in ProjCostTrans table and then when posting the Intercompany vendor invoice, the record Id is then updated into the ProjEmplTrans table.

Open Vendor Invoice

VendInvoiceInfoLine_Project table will now store the record ID for open vendor invoice of hour, expense and Item as well as for the other intercompany transactions.

View Related Info

This sections details out how the related information based on the record ID's viewed and reported.

Timesheet

Timesheet reference are created into the project posted transaction form under related information tab. A new button has been added for showing the reference for posted timesheet records. Timesheet button will be enabled for timesheet posted transaction and user can view the original records of timesheet using timesheet button.

Timesheet comments

We have introduced new fact box on the ‘Posted transactions’ and ‘Hour transactions’ form to display the timesheet comments for the timesheet records. On this fact box user can view the ‘Internal comments’ and ‘External comments’ for each timesheet record. This fact box is available only when ‘Show comments on transaction’ parameter is marked on projects360 parameters form.

PSA Integrations

projects360 has introduced another segment into the projects360 suite for the various integrations that have been built between Microsoft Dynamics 365 finance and operations and Project Service Automation application (PSA).

The configurations and integrations involved in the module are as follows:

[Generic Configurations](#)

[Customers Integration](#)

[Project Contracts Integration](#)

[Projects Integration](#)

[Resource Integration](#)

[Work Breakdown Integration](#)

[Timesheets Integration](#)

[Assumptions for Integration](#)

[Integrations Flowcharts](#)

The data flow supported by this set of integrations is only one way i.e. from Project Service Automation application (PSA) to Microsoft Dynamics 365 finance and operations. The integration has been built using custom code and not using any middle ware.

Select a feature to view more details about them.

Generic Configurations

This section contains the information of the generic configurations required to import data from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

projects360 Integrations

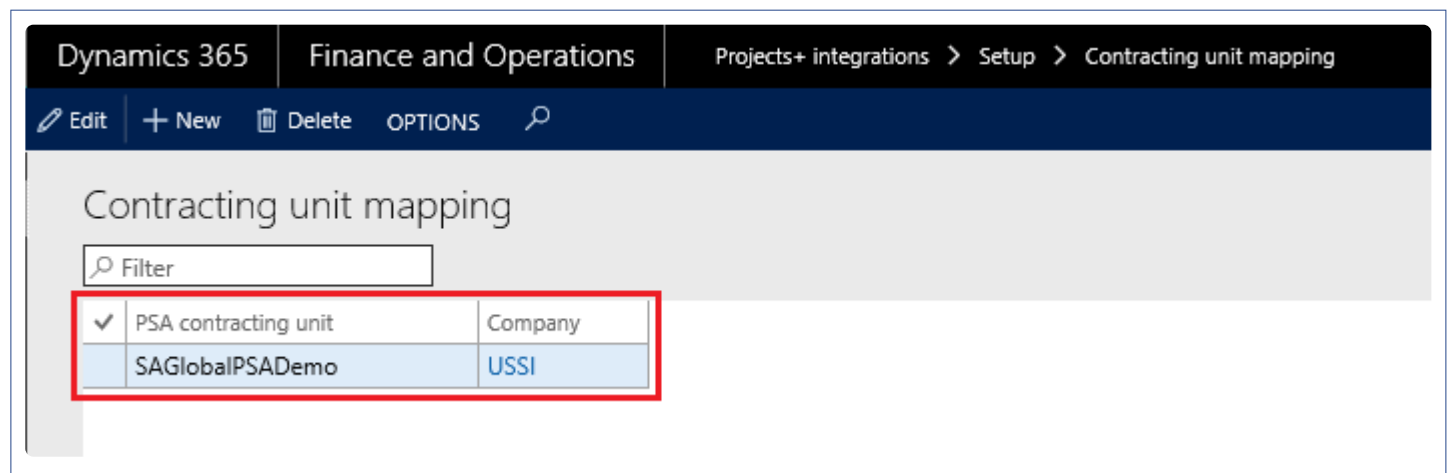

A new module has been created for these integrations and it has the following forms within it.

1. In the Setup area
 - a. Project+ integration Parameters: where the user must setup the parameters for integrations
 - b. Contracting unit mapping: where the contracting unit of Project Service Automation application (PSA) is mapped to a Legal entity in Microsoft Dynamics 365 Finance and Operations.
2. In the Periodic tasks area
 - a. Synchronize master data from PSA: where the master data of Project Service Automation application (PSA) can be Synchronized with Microsoft Dynamics 365 Finance and Operations.
 - i. Customers
 - ii. Project Contracts
 - iii. Projects
 - iv. Resource
 - b. Synchronize WBS and timesheet data from PSA: where the users can synchronize WBS and Timesheets from Project Service Automation application (PSA) to Microsoft Dynamics 365 Finance and Operations.
 - i. WBS
 - ii. Timesheet
3. In the Inquiries and reports area.
 - a. PSA Integration Log: which has the log of all the integrated records.

Configure Contracting Unit

This form allows the mapping of Project Service Automation application (PSA) contracting unit with Microsoft Dynamics 365 Finance and Operations Legal entity to integrate records. Integrations work only for the mapped entities.

Fields available on this form are:

- **Company:** This is the entity of the Microsoft Dynamics 365 Finance and Operations where the records from Project Service Automation application (PSA) will be integrated.
- **Contracting unit in PSA:** This is the entity of the Project Service Automation application (PSA), from where data will be taken to integrate into the Microsoft Dynamics 365 Finance and Operations.

General Parameters

The parameters setup in this tab will be common for all integrations. Here the Project Service Automation application (PSA) information is entered and this information is used while integrating the records from Project Service Automation application (PSA) to Microsoft Dynamics 365 Finance and Operations.

Go to projects360 integration > Setup > projects360 integrations parameters.

The screenshot displays the 'Projects+ integrations parameters' configuration page within the Dynamics 365 Finance and Operations interface. The page features a left-hand navigation pane with the following options: General, Customers, Project contracts, Projects, WBS, and Timesheet. The 'General' tab is currently active. The main content area, titled 'Projects+ integrations related information', contains a subsection labeled 'PSA DETAILS'. This section includes three input fields: 'PSA URL' with the value 'https://sag-d365demo.crm.dynarr', 'Username' with the value 'demo@saglobal.com', and 'Password' which is masked with dots. The top of the interface shows the 'Dynamics 365' and 'Finance and Operations' headers, along with various utility icons like 'Save', 'OPTIONS', and 'USSI'.

General tab can be used to fill in the PSA login details. Fields available on this form are –

- **PSA URL:** URL of Project Service Automation application (PSA) from where data needs to be imported.
- **Username:** Enter Project Service Automation application (PSA) user id to integrate the data from Project Service Automation application (PSA), selected Project Service Automation application (PSA) user should have access to entities.
- **Password:** Password for the above mentioned Project Service Automation application (PSA) user needs to specified here.

Assumptions for Integration

Assumptions for these Integrations to Work

Customer Integration

Below are the assumptions for customer integrations:

- Customers with type “Customer” in the Project Service Automation application (PSA) are only considered for integrations.
- On the Project Service Automation application (PSA) side, customer records do not have the contracting units info available, so while integrating the records from Project Service Automation application (PSA) to Microsoft Dynamics 365 F&O, all the customer records are integrated to legal entity from where this process has run.
- Customer group is defaulted via a parameter set on the projects360 parameter.
- Terms of payment between two systems has to match in order to integrate the customer records.
- Addresses validations for integration:
 - Country code to match – If blank, taken from the company address in case the zipcode also does not have the country code.
 - State code to match – If does not match then the integration record errors out.
 - Zip code – does not have to match, will be populated even if it does not exist.

Project Contract Integration

Below are the assumptions for Project contract integrations.

- Customer is always of the type customer.
- Only contracts mapped (via Contracting unit > Legal entity) brought into Ops Legal entity.

Project Integration

Below are the assumptions for project integrations.

- Customer vs Internal project.
 - Projects linked to a Contract in Project Service Automation application (PSA) are customer projects.
 - Projects not linked to a Contract are internal projects.
- Operations projects will be created 1:1 with Project Service Automation application (PSA) Contract lines.
 - The Operations Project type is derived from the Project Service Automation application (PSA) Contract line type.

- Project groups are defaulted via a parameter per project type.
- Projects must be activated manually by a Project accountant in Operations.
 - Sales prices.
 - Budgets.
 - Invoice settings.
 - Dimensions.
 - Expense category validation.
 - Modify Project group.

Resource Integration

Below are the assumptions for resource integrations.

- Resource type of user in Project Service Automation application (PSA) will only be integrated.
- Calendar periods must be composed before running the resource integration.
- If calendar is not specified in the projects360 parameters, then the imported resources will be integrated as worker.

Work Breakdown Structure (WBS) Integration

Below are the assumptions for Work Breakdown Structure (WBS) integrations.

- Hour categories are manually synchronized between systems.
- If Hour category is not specified on the Work Breakdown Structure (WBS), can use a Default category parameter.
- Work Breakdown Structure (WBS) is automatically published.
- Edits to Work Breakdown Structure (WBS) will only be done in Project Service Automation application (PSA).

Timesheet Integration

Below are the assumptions for timesheets integrations.

- Resource is mapped between systems via email address.
 - Resources are manually added to both systems.
- Only approved timesheets from Project Service Automation application (PSA) will be brought into Operations.
- Category is looked up from Work Breakdown Structure (WBS) activity.
- If a timesheet exists in Draft status, time will be added.
 - If a timesheet doesn't exist, or is in a non-Draft status, will add a new timesheet.
- Timesheets are manually mass-submitted to workflow (posting), so admins can control the posting process.

- Allows us to do daily integration of time for reporting, but manage the weekly late timesheet process.
- Time adjustments are done through a Project Service Automation application (PSA) timesheet or operation adjustment.

Other Assumptions

Some of the other assumptions are as follows:

- Frequency of integrations.
 - Customer, Project, Contracts: ~5 min – 1 hr.
 - Work Breakdown Structure (WBS), Timesheets – ~Daily.
- Default reporting position is to report from Microsoft Dynamics 365 finance and operations.
- Project Service Automation application (PSA) GUIDs (Record identifiers) are always synced to Microsoft Dynamics 365 finance and operations for traceability and to support Workspace “deep-linking”.
- Contracting units mapped to Legal entities.
 - Contracting units are unique to one Microsoft Dynamics 365 finance and operations environment.

Customers Integration

The customers integration option provides users the ability to integrate customer data available in the Project Service Automation application (PSA) environment to Microsoft Dynamics 365 for Finance and Operations. The customers created in Project Service Automation application (PSA) will have to be first integrated into Microsoft Dynamics 365 for Finance and Operations.

When the user would like to create a Project Service Automation application (PSA) customer in the Microsoft Dynamics 365 for Finance and Operations, users have to run the integrations either for an individual record or using batches.

Configure

Parameter Setups

The below form provides option to setup the information required for customers integration from PSA (CRM) environment to Microsoft Dynamics 365 Finance and Operations.

Go to projects360 integration > Setup > projects360 integrations parameters > Customers

Projects+ integrations parameters

General

Customers

Project contracts

Projects

Resource

WBS

Timesheet

Set up defaults for customers

SYNCHRONIZE	UI CONTROL	PSA PROCESS DETAILS	Number sequence type	CUSTOMER DEFAULT VALUES
Synchronize with PSA Yes <input checked="" type="checkbox"/>	UI control Yes <input checked="" type="checkbox"/>	Last execution date time 5/31/2019 08:44:07 PM	AX	Customer group 100

Fields available on the form are as follows:

- **Synchronize with PSA** – Checkbox enables or disables the Customer integration from Project Service Automation application (PSA).
- **UI control** – This checkbox controls view of Project Service Automation application (PSA) data and provided navigation to view the Project Service Automation application (PSA) data from Microsoft Dynamics 365 for Finance and Operations workspaces, Integration logs and customers form.
- **Last execution date time** – Initially the Last execution date time field will be editable. After the first execution this field will not be editable and displays the recent execution date when a user runs periodic process for integrating data. Once the record is updated in the Project Service Automation application (PSA), this date will be reset to the modified date of the Project Service Automation application (PSA) record. Modified data will be fetched from Project Service Automation application (PSA), from last execution date time to the current system date time.
- **Number sequence type** – Provides the option to use the number sequence for customers either from Microsoft Dynamics 365 for Finance and Operations number sequence or from Project Service Automation application (PSA). Since we don't have the customer ID's\numbers on the Project Service Automation application (PSA), please use this as AX to avoid the errors.

- **Customer Group** – Customer Group is not available in Project Service Automation application (PSA), so the parameter has been added where the user can setup a default value, which could be used during integration process.

Integrate Customers

Process to Integrate Customers

Below process is followed to create customers from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

1. Create the customer in Project Service Automation application (PSA) to be integrated to Microsoft Dynamics 365 for Finance and Operations.
2. Go to Microsoft Dynamics 365 for Finance and Operations and in the projects360 Integration module >>Periodic >> Synchronize master data from PSA. This area consists of periodic batch jobs to integrate master data. Using this batch job user can integrate the master data from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.
3. After synchronization if there are errors the same can be seen in the integration log file found under the Inquiries and reports area page of projects360 Integration. This form will display the results of the periodic tasks for integrating Project Service Automation application (PSA) data.

Batch job ID	Job description	Execution date ↓	Status
0		8/3/2017 08:03:28 AM	Error
0		8/3/2017 07:57:52 AM	Error
0		8/3/2017 07:57:17 AM	Error
0		8/3/2017 07:45:27 AM	Error
0		7/28/2017 08:18:06 AM	Error

Fields available on the CRM integration log form are:

- By default, the data will be filtered with error status.
- Filter provide at the header to filter records based on status and filter status are
 - Error: If there is an error then this status will be displayed
 - Completed: if the record is successfully integrated then the same will be set to success.
- PSA Integration log header contains following fields.
 - Batch Job id: Stores the Batch reference, if we are running in batch.
 - Job description: Stores the Batch description, if we are running in batch.

- Execution date: Stores the execution date time of the integration process.
 - Status: Stores the status of integration process. If Lines contains any error records, then status will be error. If all lines are successfully integrated, then status will be completed.
 - Details: This button used view the PSA integration line details.
4. User can view the details of batch process executed by clicking on the 'Details' button. Records can be filtered based on Completed and Error status using the 'Status' filter.

The screenshot shows the Dynamics 365 Finance and Operations interface for the PSA integration log. The breadcrumb trail is: Projects > Integrations > Inquiries and reports > PSA integration log. The interface includes a search bar, a filter dropdown, and a table of integration results.

Error description
Currency code does not exist.
Terms of payment Net 30 does not exist.

Data that get's Integrated

The data that will be integrated for customers are as below:

Field name	Validation description
Customer ID	If Account number is not defined in Project Service Automation application (PSA) then Microsoft Dynamics 365 finance and operations number sequence will be considered to create customer Id, else will be defaulted from Project Service Automation application (PSA).
Currency	No Validation on Currency, will consider in whatever comes from Project Service Automation application (PSA).
Relation type	Defaulted to Organization
Phone	No Validation, will consider in whatever comes from Project Service Automation application (PSA).
Email	No Validation, will consider in whatever comes from Project Service Automation application

	(PSA).
Country	Validate for its corresponding value in Microsoft Dynamics 365 finance and operations.
City	Validate for its corresponding value in Microsoft Dynamics 365 finance and operations.
Zip code	If value does not exist in Microsoft Dynamics 365 finance and operations Create New Zip code while integration customer records
State	Validate for its corresponding value in Microsoft Dynamics 365 finance and operations.
Credit limit	Defaults from Project Service Automation application (PSA).
Payment Term	Validate for its corresponding value in Microsoft Dynamics 365 finance and operations
GUID	Project Service Automation application (PSA) customer account unique ID

Review Customers

Review Integrated Data

The Customer data integrated from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations can be review on Customer master form.

Project Contracts Integration

The projects contracts integration option provides users the ability to integrate project contract data available in the Project Service Automation application (PSA) environment to Microsoft Dynamics 365 for Finance and Operations. Once the customer records are integrated from Project Service Automation application (PSA), the project contracts created in Project Service Automation application (PSA) will have to be integrated into Microsoft Dynamics 365 for Finance and Operations.

To create/integrate a project contracts available in Project Service Automation application (PSA) into the Microsoft Dynamics 365 for Finance and Operations, users have to run the integrations either for an individual record or using batches.

Configure

Parameter Setups

The below form provides options to setup the default information required for project contracts integration from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

Go To projects360 integration > Setup > projects360 integrations parameters > Project contract

Fields available on the form are as follows:

- **Synchronize with PSA** – This checkbox enables or disables the Project contracts integration from Project Service Automation application (PSA).
- **Last execution date time** – Initially the Last execution date time field will be editable. After the first execution this field will not be editable and displays the most recent execution date when a user runs periodic process for integrating data. Once the record is updated in the Project Service Automation application (PSA), this date will be reset to the modified date of the Project Service Automation application (PSA) record. Modified data will be retrieved from Project Service Automation application (PSA) from the last execution date time to the current system date time.
- **UI Control** – This checkbox controls view of Project Service Automation application (PSA) data and provides navigation to view the Project Service Automation application (PSA) data from Microsoft Dynamics for 365 Finance and Operations workspaces, Integration logs and project contracts.
- **Number sequence type** – Provides the option to use the number sequence for project contracts either from Microsoft Dynamics 365 for Finance and Operations number sequence or from Project Service Automation application (PSA).

Integrate Project Contracts

Process to Integrate Project Contracts

The below process is used to create project contracts from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

or

1. Integrate customer from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the records are successfully integrated.
2. Create a project contract in Project Service Automation application (PSA) to be integrated to Microsoft Dynamics 365 for Finance and Operations.
3. Go to Microsoft Dynamics 365 for Finance and Operations and in the projects360 Integration module > Periodic > Synchronize master data from PSA.
4. After synchronization if there are errors, they can be seen in the integration log file found under the Inquiries and reports area page of projects360 Integration. This form will display the results of the periodic tasks for integrating Project Service Automation application (PSA) data.

✓	Batch job ID	Job description	Execution date ↓	Status ▾
	0		8/3/2017 08:03:28 AM	Error
	0		8/3/2017 07:57:52 AM	Error
	0		8/3/2017 07:57:17 AM	Error
	0		8/3/2017 07:45:27 AM	Error
	0		7/28/2017 08:18:06 AM	Error

Fields available on the CRM integration log form are:

- By default, the data will be filtered with error status.
- Filter provide at the header to filter records based on status and filter status are
 - Error: If there is an error then this status will be displayed
 - Completed: if the record is successfully integrated then the same will be set to success.
- PSA Integration log header contains following fields.
 - Batch Job ID: Stores the Batch reference, if we are running in batch.

- Job description: Stores the Batch description, if we are running in batch.
 - Execution date: Stores the execution date time of the integration process.
 - Status: Stores the status of integration process. If Lines contains any error records, then status will be error. If all lines are successfully integrated, then status will be completed.
 - Details: This button used view the Project Service Automation application (PSA) integration line details.
5. User can view the details of batch process executed by clicking on the 'Details' button. Records can be filtered based on Completed and Error status using the 'Status' filter.

Projects Integration

The projects integration option provides users ability to integrate projects data available in the Project Service Automation application (PSA) environment to Microsoft Dynamics 365 for Finance and Operations. The projects created in Project Service Automation application (PSA) will have to be integrated after integration of customers and Project contracts into Microsoft Dynamics 365 for Finance and Operations.

When the user would like to create a Project Service Automation application (PSA) Project into the Microsoft Dynamics 365 for Finance and Operations, users have to run the integrations either for an individual record or using batches.

Configure

Parameter Setups

The below form provides options to setup the information required for project integration from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

Go to *projects360 integration > Setup > projects360 integrations parameters > Projects*.

Fields available on the form are as follows:

- **Synchronize with PSA** – This checkbox enables or disables the Project integration from Project Service Automation application (PSA).
- **UI control** – This checkbox controls view of Project Service Automation application (PSA) data and provides navigation to view the Project Service Automation application (PSA) data from Microsoft Dynamics 365 for Finance and Operations workspaces, Integration logs and Projects.
- **Last execution date time** – Initially the Last execution date time field will be editable. After the first execution this field will not be editable and displays the most recent execution date when a user runs periodic process for integrating data. Once the record is updated in the Project Service Automation application (PSA), this date will be reset to the modified date of the Project Service Automation application (PSA) record. The modified data will be retrieved from Project Service Automation application (PSA), from last execution date time to the current system date time.
- **Number sequence type** – Provides the option to use the number sequence for projects either from Microsoft Dynamics 365 for Finance and Operations number sequence or from Project Service Automation application (PSA). Since we don't have the project ID's\numbers on the Project Service

Automation application (PSA), please use this as AX to avoid the errors.

- **Project Groups** – Project Groups are not available in Project Service Automation application (PSA), so parameters were added at Project+ integration parameters setup for Fixed price, Time and material and Internal Projects as a default value to be used during integration process for Project.
- **Allow adjustment transactions** – For the integrated projects, standard adjustment was not allowed so parameters were added at Project360 integration parameters which allows to perform standard adjustment for integrated projects.

Integrate Projects

Process to Integrate Projects

The below process is used to create projects from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

1. Integrate a customer from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the customer records are successfully integrated.
2. Integrate a project contract from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the records are successfully integrated.
3. Create a Project in Project Service Automation application (PSA) to be integrated in to Microsoft Dynamics for Finance and Operations.
4. Go to Microsoft Dynamics 365 for Finance and Operations and in the projects360 Integration module > Periodic > Synchronize master data from PSA.
5. After synchronization, if there are errors, they can be seen in the integration log file found under the Inquiries and reports area page of projects360 Integration. This form will display the results of the periodic tasks for integrating Project Service Automation application (PSA) data.

✓	Batch job ID	Job description	Execution date ↓	Status ▾
	0		8/3/2017 08:03:28 AM	Error
	0		8/3/2017 07:57:52 AM	Error
	0		8/3/2017 07:57:17 AM	Error
	0		8/3/2017 07:45:27 AM	Error
	0		7/28/2017 08:18:06 AM	Error

Fields available on the CRM integration log form are:

- By default, the data will be filtered with error status.
- Filter provided at the header to filter records based on status and filter status are:
 - Error: If there is an error then this status will be displayed.
 - Completed: if the record is successfully integrated then the same will be set to success.
- PSA Integration log header contains following fields.

- Batch Job id: Stores the Batch reference, if we are running in batch.
 - Job description: Stores the Batch description, if we are running in batch.
 - Execution date: Stores the execution date time of the integration process.
 - Status: Stores the status of integration process. If Lines contains any error records, then status will be error. If all lines are successfully integrated, then status will be completed.
- Details: This button is used to view the Project Service Automation application (PSA) integration line details.
6. User can view the details of batch process executed by clicking on the 'Details' button. Records can be filtered based on Completed and Error status using the 'Status' filter.

The screenshot shows the Dynamics 365 Finance and Operations interface for the PSA integration log. The breadcrumb trail is: Projects+ Integrations > Inquiries and reports > PSA integration log. The page title is "ERROR Integration details". There is a "Filter" input field. The "Overview" tab is selected, displaying a table with the following data:

Type	Name	Reference num	Status	Action

Resource Integration

The resource integration option provides users the ability to integrate resource data in the Project Service Automation application (PSA) environment to Microsoft Dynamics 365 for Finance and Operations. The resource information created\ available in Project Service Automation application (PSA) should be integrated after integration of customers, project contract and projects into Microsoft Dynamics 365 for Finance and Operations to avoid unnecessary errors.

When the user would like to create a resources information available in Project Service Automation application (PSA) into the Microsoft Dynamics 365 for Finance and Operations, users have to run the resource integrations either for an individual record or using batches.

Configure

Parameter Setups

The below form provides option to setup some of the default information required for resource integration from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

Go to *projects360 integration > Setup > projects360 integrations parameters > Resource*.

Fields available on the form are as follows:

- **Synchronize with PSA** – This checkbox enables or disables the Resource integration with Project Service Automation application (PSA).
- **Create associated user** – This checkbox helps in deciding whether the corresponding user needs to be created in Microsoft Dynamics 365 for Finance and Operations. If this field is enabled, then the associated user record in the Project Service Automation application (PSA) will be automatically created in Microsoft Dynamics 365 for Finance and Operations.
- **UI control** – This checkbox controls view of Project Service Automation application (PSA) data. If this field is enabled, then the users can navigation to Project Service Automation application (PSA) data from Microsoft Dynamics 365 for Finance and Operations workspace, Integration log and resource forms.
- **Last execution date time** – Initially the Last execution date time field will be editable. After the first execution this field will not be editable and displays the recent execution date when a user runs

periodic process for integrating data. Once the record is updated in the Project Service Automation application (PSA), this date will be reset to the modified date of the Project Service Automation application (PSA) record. Modified data will be retrieved from Project Service Automation application (PSA), from last execution date time to the current system date time.

- **Calendar** – Calendar is not available in Project Service Automation application (PSA), so the calendar value for the integrated resource will be set from this parameter setup.
- **Period Types** – Period types are not available in Project Service Automation application (PSA), so the period types value for the integrated resource will be set from this parameter setup.
- **Resource as a vendor** – This field determines whether the resource should be added as a vendor also in Microsoft Dynamics 365 for Finance and Operations. If this field is enabled, the resource will be added as a vendor as well and there will be link created between resource and vendor.
- **Vendor group** – If the resource as vendor checkbox is enabled, the integrated resource is created as vendor and the vendor group will be assigned from this parameter setup.
- **Method of payment** – If the resource as vendor checkbox is enabled, the integrated resource is created as vendor and the method of payment will be assigned from this parameter setup.

Integrate Resources

Process to Integrate Resources

Below process is followed to create resources from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

1. Integrate a customers from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the customer records are successfully integrated.
2. Integrate a project contracts from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the records are successfully integrated.
3. Integrate a projects from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the records are successfully integrated.
4. Create a resource in Project Service Automation application (PSA). Add email ID, utilization target and resource role for the resource in Project Service Automation application (PSA).
5. Go to Microsoft Dynamics 365 for Finance and Operations and in the projects360 Integration module > Periodic > Synchronize master data from PSA.
6. After synchronization if there are errors, they can be seen in the integration log file found under the Inquiries and reports area page of projects360 Integration. This form will display the results of the periodic tasks for integrating Project Service Automation application (PSA) data.

Batch job ID	Job description	Execution date ↓	Status ▾
0		8/3/2017 08:03:28 AM	Error
0		8/3/2017 07:57:52 AM	Error
0		8/3/2017 07:57:17 AM	Error
0		8/3/2017 07:45:27 AM	Error
0		7/28/2017 08:18:06 AM	Error

Fields available on the CRM integration log form are:

- By default, the data will be filtered with error status.
 - Filter provide at the header to filter records based on status and filter status are:
 - Error: If there is an error then this status will be displayed.

- Completed: if the record is successfully integrated then the same will be set to success.
 - PSA Integration log header contains following fields.
 - Batch Job id: Stores the Batch reference, if running in batch.
 - Job description: Stores the Batch description, if running in batch.
 - Execution date: Stores the execution date and time of the integration process.
 - Status: Stores the status of integration process. If Lines contains any error records, then status will be error. If all lines are successfully integrated, then status will be completed.
 - Details: This button used view the Project Service Automation application (PSA) integration line details.
7. User can view the details of batch process executed by clicking on the 'Details' button. Records can be filtered based on Completed and Error status using the 'Status' filter.

The screenshot shows the Dynamics 365 interface for the PSA Integration log. The breadcrumb trail is: Dynamics 365 > Finance and Operations > Projects+ Integrations > Inquiries and reports > PSA integration log. The page title is "COMPLETED Integration details". There is a "Filter" input field. Below the filter is an "Overview" tab. The main content is a table with the following columns: Type, Name, PSA GUID, Status, and Action. The table contains 10 rows of data, all with a status of "Completed" and an action of "Created".

Type	Name	PSA GUID	Status	Action
Resource	Appasaheb Narasannavar	{12C09687-FF16-E811-A836-000D3A13A101}	Completed	Created
Resource	Nagesha V	{4CDE56CE-5B18-E811-A83E-000D3A13A387}	Completed	Created

WBS Integrations

The WBS integration option provides users the ability to integrate WBS data available in the Project Service Automation application (PSA) environment to Microsoft Dynamics 365 for Finance and Operations. To integrate work breakdown structure created in Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations, projects need to be integrated first to avoid the unnecessary errors of projects not found for the imported work breakdown structures.

When the user would like to create a work breakdown structure available for different projects in Project Service Automation application (PSA) into the Microsoft Dynamics 365 for Finance and Operations, users have to run the WBS integrations either for an individual record or using batches.

Configure

Parameter Setups

The below form provides option to setup the information required for work breakdown structure integration from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

Go to projects360 integration > Setup > projects360 integrations parameters > WBS.

Fields available on the form are as follows:

- **Synchronize with PSA** – This checkbox enables or disables the work breakdown integration from Project Service Automation application (PSA).
- **Last execution date time** – Initially the Last execution date time field will be editable. After the first execution this field will not be editable and displays the most recent execution date when a user runs the periodic process for integrating data. Once the record is updated in the Project Service Automation application (PSA), this date will be reset to the modified date of the Project Service Automation application (PSA) record. Modified data will be retrieved from Project Service Automation application (PSA), from last execution date time to the current system date time.
- **UI control** – This checkbox controls view of Project Service Automation application (PSA) data and provides the navigation to view the Project Service Automation application (PSA) data from Microsoft Dynamics 365 for Finance and Operations workspaces, Integration logs and Projects.
- **Default Category** – When Category is left blank in Project Service Automation application (PSA) on a work breakdown structure line, then the value from this parameter setup will be considered.

Integrate WBS

Process to Integrate Work Breakdown Structure

Below process is followed to create work breakdown structure from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

1. Integrate the projects created in Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that records are successfully integrated.
2. Create a work breakdown structure lines for Integrated project in Project Service Automation application (PSA).
3. Go to Microsoft Dynamics 365 for Finance and Operations and in the projects360 Integration module > Periodic > Synchronize WBS and Timesheet data from Project Service Automation application (PSA).
4. After synchronization, if there are errors, they can be seen in the integration log file found under the Inquiries and reports area page of projects360 Integration. This form will display the results of the periodic tasks for integrating Project Service Automation application (PSA) data.

Category is missing

Fields available on the CRM integration log form are:

- By default, the data will be filtered with error status.
- Filter provided at the header to filter records based on status and filter status are:
 - Error: If there is an error then this status will be displayed
 - Completed: if the record is successfully integrated then the same will be set to success.
- PSA Integration log header contains following fields.
 - Batch Job id: Stores the Batch reference, if running in batch.
 - Job description: Stores the Batch description, if running in batch.
 - Execution date: Stores the execution date time of the integration process.
 - Status: Stores the status of integration process. If Lines contains any error records, then status will be error. If all lines are successfully integrated, then status will be completed.
- Details: This button used view the PSA integration line details.

Data that get's Integrated

The data that will be integrated for work breakdown structure is shown below:

Field name	Validation description
Task Name	Defaults from Project Service Automation application (PSA).
Task Category	Defaults based on work breakdown structure Project+ Integration parameter.
Effort task	Defaults from Project Service Automation application (PSA).
Start and Finish	Defaults from Project Service Automation application (PSA) work breakdown structure line.

date	
Duration	Defaults from Project Service Automation application (PSA) work breakdown structure line.
Number of resource	Defaults from Project Service Automation application (PSA) work breakdown structure line.

Note – In order to delete the WBS records in PSA environment and re-integrate the information back to Microsoft Dynamics F&O, you need to enable the Auditing for Entities functionality in PSA, below visual shows more details.

The screenshot displays the Microsoft Dynamics 365 System Settings interface. The top navigation bar shows 'Dynamics 365', 'Settings', and 'Auditing'. The main content area is titled 'System Settings' and includes tabs for 'General', 'Formats', 'Auditing', 'Email', 'Marketing', 'Customization', and 'Outlook'. The 'Auditing' tab is selected, showing 'Audit Settings' and 'Enable Auditing in the following areas'. The 'Project Task' entity is selected in the left pane, and the 'Auditing' checkbox is checked in the right pane. The interface also shows a 'Global Audit Settings' section and an 'Audit Summary View' section.

Review WBS

Review Integrated Data

The work breakdown structure data integrated from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations can be reviewed on work breakdown page.

Timesheets Integration

The timesheets integration option provides users the ability to integrate timesheet data available in the Project Service Automation application (PSA) environment to Microsoft Dynamics 365 for Finance and Operations. The timesheet records created in Project Service Automation application (PSA) will have to be integrated after integration of project and Work Breakdown Structure (WBS) into Microsoft Dynamics 365 for Finance and Operations.

To create\import a Project Service Automation application (PSA) timesheets into the Microsoft Dynamics 365 for Finance and Operations, users would have to run the resource integrations either for an individual record or using batches.

Configure

Parameter Setups

The below form provides options to setup some of the default information required for timesheets integration from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations.

Go to projects360 integration > Setup > projects360 integrations parameters> Timesheets.

The screenshot shows the 'Projects+ integrations parameters' form in Microsoft Dynamics 365 for Finance and Operations. The form is titled 'Set up defaults for project timesheets'. It includes a left-hand navigation pane with options: General, Customers, Project contracts, Projects, WBS, and Timesheet (selected). The main content area contains several sections:

- SYNCHRONIZE**: A section with a checkbox 'Synchronize with PSA' set to 'Yes' (highlighted with a red box).
- UI CONTROL**: A section with a checkbox 'UI control' set to 'Yes'.
- PSA PROCESS DETAILS**: A section with a 'Last execution date time' field showing '8/14/2017 12:00:00 AM'.
- ABSENCE**: A section with a 'Project ID' dropdown (00000096) and an 'Activity number' dropdown (W00000255).
- VACATION**: A section with a 'Project ID' dropdown (00000097) and an 'Activity number' dropdown (W000002436).

Fields available on the form are as follows:

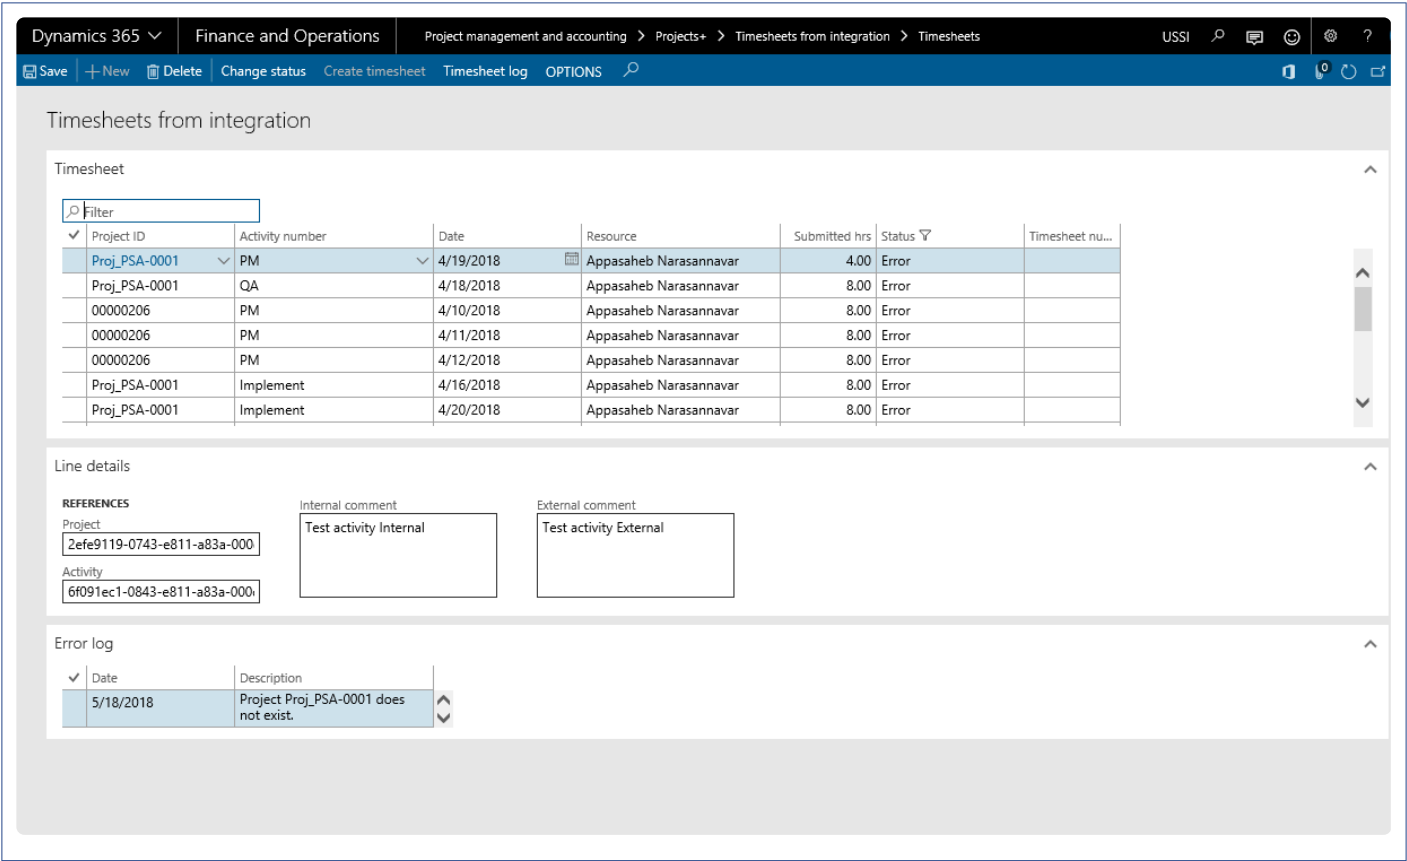

- **Synchronize with PSA** – This checkbox enables or disables the Resource integration with Project Service Automation application (PSA).
- **UI control** – This checkbox controls view of Project Service Automation application (PSA) data. If this field is enabled, then users can navigate to Project Service Automation application (PSA) data from Microsoft Dynamics 365 for Finance and Operations workspace, Integration log and resource forms.
- **Last execution date time** – Initially the Last execution date time field will be editable. After the first execution this field will not be editable and displays the most recent execution date when a user runs the periodic process for integrating data. Once the record is updated in the Project Service Automation application (PSA), this date will be reset to the modified date of the Project Service Automation application (PSA) record. Modified data will be retrieved from Project Service Automation application (PSA), from last execution date and time to the current system date and time.
- **Absence and Vacation** – Project Service Automation application (PSA) does not have the project defined for the leave and vacation time entries, so these two fields give options to set up default project and activity for absence and vacation types to be used while creating timesheets in Microsoft Dynamics 365 for Finance and Operations for the work type “leave/vacation”.

Integrate Timesheets

Process to Integrate Timesheets

The below process is used to create\import timesheets from Project Service Automation application (PSA) into Microsoft Dynamics 365 for Finance and Operations.

1. Integrate a project from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the records are successfully integrated.
2. Set the project to be 'In Progress' status in Microsoft Dynamics 365 for Finance and Operations.
3. Integrate a Work Breakdown Structure (WBS) data from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations and verify that the records are successfully integrated.
4. Create and submit the time entries in Project Service Automation application (PSA). Go to the submitted time entries and approve them as only approved time entries are considered for integrations.
5. Go to Microsoft Dynamics 365 for Finance and Operations and in the projects360 Integration module >Periodic > Synchronize WBS and Timesheet data from PSA.
6. After synchronization, if there are errors, they can be seen in the either timesheets integration log or timesheets from integration. These forms will display the results of the timesheet periodic tasks for integrating Project Service Automation application (PSA) data. Users can view the details of batch process executed by selecting a record on the grid. The lines details and error information is shown on the Line Details and Error log sections respectively.

Data that get's Integrated

The data that will be integrated for timesheets is as below:

Field name	Validation description
Project ID	Defaulted from Project Service Automation application (PSA) timesheet, if timesheet created for vacation and Absence then defaults from projects360 integration parameters.
Activity ID	Defaulted from Project Service Automation application (PSA) timesheet, if timesheet created for vacation and Absence then default from projects360 integration parameters.
Resource	Resource email id from Project Service Automation application (PSA) is mapped with Microsoft Dynamics 365 for Finance and Operations user.
Timesheet hours	Submitted and approved hours for the resource and for that period in Project Service Automation application (PSA).
Timesheet period	Timesheet period is decided by the Date on which the timesheet was submitted by user on Project Service Automation application (PSA).
Externa comment	Defaults from Project Service Automation application (PSA) timesheet records.
Internal comment	Defaults from Project Service Automation application (PSA) timesheet records.

Review Timesheets

Review Integrated Data

The timesheet data integrated from Project Service Automation application (PSA) to Microsoft Dynamics 365 for Finance and Operations can be reviewed on the All timesheet form. The individual details about each timesheet can be seen on the timesheet entry form as shown in the below picture.

Flow Charts

Flow chart of the master data integrations

Flow chart of WBS and Timesheets integrations

Quotation Enhancements

The features relating to qualifications for Architecture and Engineering industries have been grouped together in this document. The projects360 features that are available in the quotation enhancements are helpful in analyzing the details of the construction and architectural projects and providing quotations. These features are also helpful in the bidding process.

The projects360 features grouped together in this segment are:

[Qualification View](#)

Select a feature to view more details about them.

Qualification View

The features relating to Qualifications for Architecture and Engineering industries have been grouped together in this document. The projects360 features that are available under this classification can be found in Qualification View.

Many companies in the Architecture, Engineering, and Construction industries need to track very detailed information about the projects that they complete to prove they have the experience to receive additional work from government agencies. There will be certain attributes attached to the projects which would determine whether the company is qualified or competent enough to receive additional work.

To track these attributes about a project, a means to associate them to a project and a method to easily query the attributes for a list of projects, Qualification view is a useful feature.

Configure Qualifications

✿ This sections details the configuration process involved in the setting qualification parameters and then assigning them to a projects.

Parameter Setup

This feature is not parameter driven. However, there is one setup which controls the update of timesheets related to the project into the qualification view based on this parameter.

Go to *Project management and accounting > Setups > projects360 parameters > Qualifications tab*

The screenshot shows the Dynamics 365 interface for 'Projects+ parameters'. The breadcrumb trail is: Dynamics 365 > Finance and Operations > Project management and accounting > Setup > Projects+ parameters. The left sidebar lists various setup categories, with 'Qualification' highlighted. The main content area is titled 'Set up parameters for qualification' and contains a red-bordered box labeled 'QUALIFICATION' with the text 'Auto-update qualification data' and a toggle switch set to 'Yes'.

To enable the automatic update of the hours data into the project's qualification data, set this option to YES.

Qualification View Setups

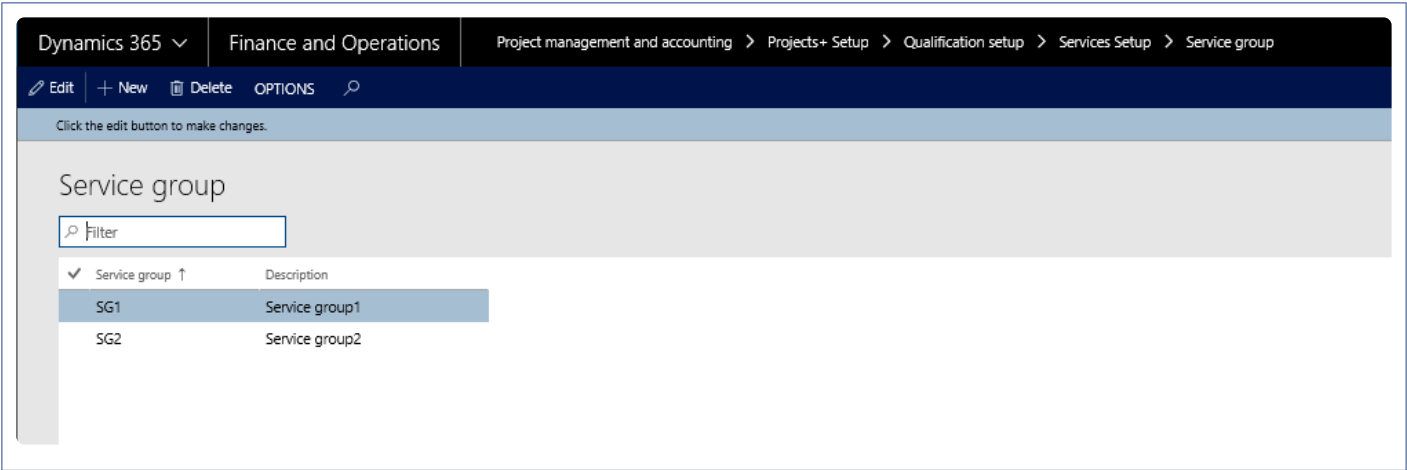

This feature is for recording the qualification data on the projects. To meet this requirement few setup forms have been introduced in the setup area of Projects. All the forms are grouped under the menu item Qualification setup.

Go to *Project management and accounting > Setups > projects360 > Qualification setup > Services setup > Service Group*.

Under this group there are two links that opens Service group form and Services form.

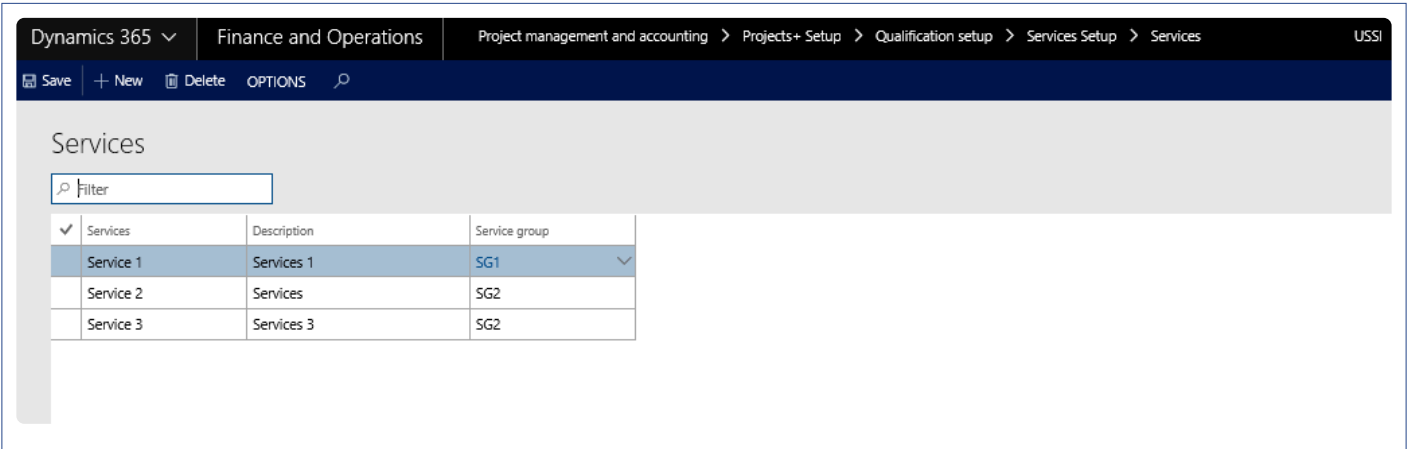

Service Setup

Go to *Project management and accounting > Setups > projects360 > Qualification setup > Services setup > Service Group*.

1. In the Service group fields, enter the group name.
2. In the Description field, specify a description for the service group.

Go to *Project management and accounting > Setups > projects360 > Qualification setup > Services setup > Service.*

1. In the Services form, in the Service field, specify the name of the services.
2. In the Description field, specify a description of the services.
3. In the Service group, select the service group attached to the services.

Location Setup

Go to *Project management and accounting > Setups > projects360 > Qualification setup > Location setup > Region*

Field	Description
Project	Select from projects. Only projects which have Qualification data check box not selected “exclude” will be available. Select the value in this field or filter one or more fields and click Search to find related project results.
Project title	Enter project title or filter one or more fields & click Search to find related project results.
Project owner	Select the name of the project owner. Select the value or in one or filter fields and click

	Search to find related project results.
Contract type	Select the options values as Prime, sub-contractor, joint venture. Select the value only in this field or filter one or more fields & click Search to find related results.
Client\prime contractor	Select client or prime contractor. Select the value in this field or filter one or more fields and click Search to find related results.
FedBizOpps	Enter FedBizOpps in this field or filter of one or more fields and click Search to find related results.
Short description	Enter short description in this field or filter of one or more fields and click Search to find related results.
Project summary	Enter project summary in this field or filter one or more fields and click Search to find related results.
Keywords	Enter keywords in this field or filter one or more fields and click Search to find related.
Contract value	Enter contract value. Use >,<>= signs to find projects with contract value specified here. Enter value only in this field or filter of one or more fields and click Search to find related results.
Duration in days	Enter duration in days. Use >,<>= signs to find projects with days specified here. Enter value in this field or filter one or more fields and click Search to find related results.
Project highlight	If user enters the identification of project, the Project highlight of the same project. If the identification of project is selected, this field will be blank. Select the value in this field or filter more fields and click Search to find related results.
Project type	Select the project type. Select the value in this field or filter one or more fields and click Search to find related results.
Market Drop down to select market	Select value only in this field or filter one or more fields and click Search to find related results.
Client type	Select the client type. Select the value only on this field or combination of one or more fields and click search to find related results.
Service group	Select the service group. Select the value only in this field or filter more fields and click Search to find related results.
Services	Select services. Select the value only in this field or filter fields and click Search to find related results.
User defined 1	Enter value in this field or filter one or more fields and click Search to find related results.
Facility type	Select the facility type. Select value in this field or filter one or more fields and click Search to find related results.
Facility attribute 1	Select facility attribute. Select value in this field or filter one or more fields and click Search to find related results.

Facility attribute 2	Select the values as element 1, element 2, and element 3. Select value in this field or filter one or more fields and click Search to find related results.
Structure type	Select structure type. Select value in this field or filter one or more fields and click Search to find related results.
Structure attribute1	Select structure attribute. Select value in this field or filter one or more fields and click Search to find related results.
Structure attribute2	Select values as element 1, element 2, and element 3. Select value this field or filter one or more fields and click Search to find related results.

Auto-update Qualifications

✿ This section details how the employee and time details are added to the the project qualification data form.

In the projects360 Inquiries parameters, a new parameter for Auto updating qualification data has been brought in. The functionality of this feature is to automatically add the employee details and the time details after the timesheets are posted for the employee, into the project qualification data form. This parameter is available in Project Management and accounting module.

Go to *Project management and accounting > Setup > projects360 parameters > Qualification tab.*

The screenshot shows the Dynamics 365 interface for the 'Projects+ parameters' setup. The breadcrumb trail at the top reads: 'Dynamics 365 > Finance and Operations > Project management and accounting > Setup > Projects+ parameters'. Below the breadcrumb, there is a 'Save' button and an 'OPTIONS' dropdown. The main heading is 'Projects+ parameters'. On the left, a sidebar lists several categories: Invoicing, Work breakdown structure, Resourcing, Timesheets, Transactions, and Qualification (which is currently selected). The main content area is titled 'Set up parameters for qualification'. Under the heading 'QUALIFICATION', there is a section for 'Auto-update qualification data' with a 'Yes' label and a checked checkbox.

Select the Auto- update classification data checkbox, to add the employee details. Once the timesheet is posted for an employee, the record will be added in the Employees details section of the Project qualification view, which is shown in the below screenshot:

Employees

+ Add-line

 Remove

Edit work description

✓ Employee	Employee name	Start date	End date	Role ID	Hours worked	Work description
<div>Luke Lenhart</div>	Luke Lenhart	8/16/2011	8/16/2017	Project manager	80.00	

The following details of the employee is updated automatically when the above parameter is marked.

- Employee
- Employee name
- Start and End date
- Role ID
- Hours worked

Office 365

All the features relating to Office 365 integrations have been grouped together in this section. The projects360 features that are grouped together in this section are:

[Microsoft Teams Chat](#)

Microsoft Teams Chat

projects360 has added an integration between the Microsoft Dynamics 365 Finance and Operations and Microsoft Teams.

Introduction of this feature allows different parties\peoples\roles associated to the form to chat with each other. Teams can be opened from inside the D365 and conversation can be started.

Configure Teams Chat

✿ This section details out the setups required to be configured for setting Microsoft Teams integration with Microsoft Dynamics 365 Finance and Operations.

Parameter Setup

On projects360 parameter form, new tab called 'Communication' added. There is drop-down field 'Chat and calling integration' with the options as 'None' and 'Microsoft Teams'. The default value of this field is set as None. In order to use this feature, select 'Microsoft Teams' from drop-down.

Go to *Project management and accounting > Setups > projects360 Parameters > Communication Tab.*

The screenshot shows the Dynamics 365 Finance and Operations interface. The top navigation bar includes 'Dynamics 365' and 'Finance and Operations'. Below the navigation bar, the 'Projects+ parameters' section is visible. On the left, a sidebar lists various parameters: Invoicing, Work breakdown structure, Resourcing, Timesheets, Transactions, Qualification, Unit billing, and Communication. The 'Communication' tab is selected and highlighted. The main content area displays the 'Set up parameters for chat and communication' section. This section includes a dropdown menu for 'Chat and calling integration' with options 'None' and 'Microsoft Teams'. The 'Microsoft Teams' option is highlighted.

Using Teams Chat

Communicating with the right person is seamless with embedded Microsoft Teams chat buttons. A user can initiate a Teams chat, with the *right* person, from buttons in the form they are already working in. One of the forms is shown below.

When Project accountant prepares an Invoice proposal for projects and submits to the Billing approver for approval, In such scenarios to expedite the approval process project accountant can chat with the billing approver to look into the submitted invoice proposal and revert back for changes so that the project accountant can proceed with posting of the invoice.

Implementation Tools

Learning Plans

The learning plans feature in the projects360 is introduced with the intention of providing the training to the users who are interested in learning the Microsoft Dynamics D365 for Finance and Operations in a Business Process Modular structure. For this release, the task guides will be loaded from LCS.

The data to store and populate Learning plans is stored and maintained in LCS. LCS provides a safe space to store Learning Plan data if, for example, users are learning in a Test environment that may get periodically refreshed from Production.

There is a new security role “Training plan manager” created to maintain the learning plans. This role along with the System administrator role has the access to load and maintain the learning plans. All the other roles have read only access.

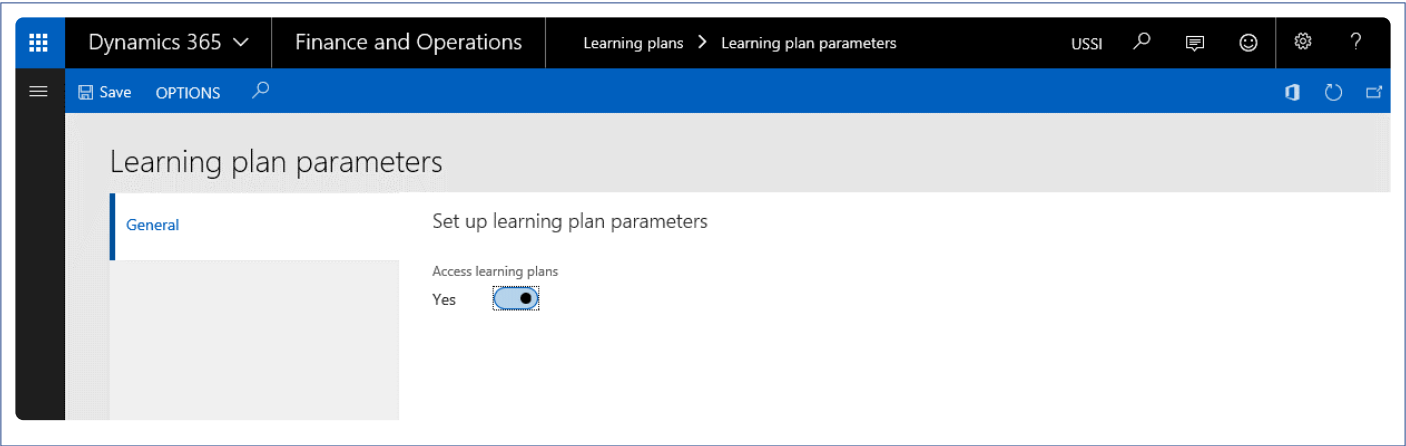

Configure

 *To start using Learning plans feature, users need to perform specific setups. This section details the configuration process.*

Parameter Setup

Learning Plans feature is parameter driven. Once the “Access learning plans” checkbox is enabled on the learning plan parameter form, users will be able to access the learning plans.

Go to *Learning Plans > Learning plan parameters*

If the “Access learning plan” checkbox is marked as ‘No’, users will be able to see the menu but will not able to open the learning plans window. The message box will have the message recorded that the “Learning plan feature is not enabled on the parameters”.

Fields and buttons available on this form are:

Field name	Description
Access Learning Plan	This checkbox decides whether users will be able to use the Learning plans feature for the logged in legal entity or not.
Save Button	Saves the changes on the form.

Using Learning Plans

✿ This section explains how the learning plans can be loaded from Microsoft Dynamics Lifecycle Services into the Microsoft Dynamics 365 for Finance and Operations. This section also guides how the learning plans are used to get familiar with the topics loaded from Microsoft Dynamics Lifecycle Services.

Learning Plans Form

A new form has been introduced for the users to load the learning plans from Microsoft Dynamics Lifecycle Services in business process modular structure. The Training plan manager or system administrator can load the tasks guides from Microsoft Dynamics Lifecycle Services and maintain it, provided he/she has the access to Business Process Modeler's from Microsoft Dynamics Lifecycle Services. For the other roles access of this form will be in read only mode.

Go to *Help and Support > Learning plans*.

The screenshot displays the Microsoft Dynamics 365 Learning Plans form. The top navigation bar includes 'Dynamics 365' and 'Finance and Operations'. Below this is a blue ribbon with 'Save', 'Load from LCS', and 'OPTIONS'. A left-hand navigation pane lists various sections, with 'Practice navigation' highlighted in red. The main area is titled 'Learning plans' and contains a 'General' tab with the following fields:

- Name:** Practice navigation
- Description:** Play this task guide to practice the common navigation and filtering scenarios for Dynamics 365 Finance and Operations.
- Menu item name:** All customers
- Open menu item:** CustTableListPage
- Online help:** <https://docs.microsoft.com/en-us/dynamics365/unified-operations/fin-and-ops/get-started/navigation-search>

Tree section: shows the business process modular's from Microsoft Dynamics Lifecycle Services in the tree structure, once users loads the data from Microsoft Dynamics Lifecycle Services.

Learning plan section: shows the information for the selected business process modeler details. User can

add the information in this section and save the details.

Buttons available on this form are:

Field name	Description
Load from LCS	Provides the ability for user to load the Business Process Modeler's from Microsoft Dynamics Lifecycle Services.
Save Button	Saves the changes user has made on the form.
Play task guide	This button helps in playing the task guides attached with the selected Business Process Modeler. If no task guide is attached to the Business Process Modeler, this button will be disabled.

Fields available on this form are:

Field name	Description
Name	Shows the name defined for the selected node in the Microsoft Dynamics Lifecycle Services.
Description	Shows the description defined for the selected node in the Microsoft Dynamics Lifecycle Services.
Menu item name	Shows the menu item associated with the Business Process Modeler for the selected node.
Open menu item	Shows the link of the menu item associated with the Business Process Modeler for the selected node. On selecting, this will open the form or workspace as defined by the user. If the description contains table of form information, that will be shown in this field.
Online help	Shows the online help link for the selected node. If the description contains a web address, that will be shown in this field.

Learning Plans Process

This section outlines the process required to be completed in-order to setup and use the learning plans.

1. Training plan manager or system administrator logs into the Microsoft Dynamics 365 for Finance and Operations and load the Business Process Modeler's from Microsoft Dynamics Lifecycle Services.
Note: Make sure the logged in user has the required access in the Microsoft Dynamics Lifecycle Services.
2. Once the Business Process Modelers are loaded correctly, users are able to view the details in the learning plan form.
3. Select a node where a task guide is attached and hit Play task guide button.
4. User is taken to a new window with the steps from selected task guides displayed.

5. User then can start the task guide or back out, based on his selection.
6. If the user selects to start the task guide, task guide is loaded in the run mode and guides user to each step.
7. Perform the steps as mentioned the guide and exit once all the steps are completed.

Assumptions and Notes

1. User who is loading the business process modular's from Microsoft Dynamics Lifecycle Services has adequate access on the LCS to perform this action.
2. Any edits required to be made to the task guides must be done from the Microsoft Dynamics Lifecycle Services.
3. Structure for the loaded Business Process Modeler's will be as per the structure defined in the Microsoft Dynamics Lifecycle Services.
4. The learning plan parameter and learning plans are company specific. If the user wants to set up learning plans in multiple companies then he needs to configure in each company.

Data Management

The data management in Dynamics 365 for Finance and Operations, is based on the Data Import/Export Framework (DIXF). This tool, along with the other tools in Lifecycle Services, LCS, helps the customers and partners to quickly set up their initial environment from blank data, manage the configuration data throughout the lifecycle of the project, plan and execute data migration, and move the data from one environment to another.

Data Management also provides advanced data management capabilities, which makes the overall data export and import seamless, for both standard Dynamics 365 for Finance and Operations data entities, as well as any custom entities that you might have developed for your business requirements. This framework provides an easy to use front end interface for data export and import management, so that regular users of Dynamics 365 for Finance and Operations can use it, without requiring advanced knowledge of development and databases.

Some of the sections listed under Data management are as follows:

[Data Entities](#)

[Load Default Data](#)

Select a feature to view more details about them.

Data entities

This section gives list of data entities used for projects360 features.

	Data entity name	Target entity
1	Client type	PMIPClientTypeEntity
	Purpose – To import or export data from Client setup form used for Qualification view.	
2	Customer integration table	PMINCustIntegrationEntity
	Purpose – Used for CRM integration.	
3	Customer PO matching	PMIPCustPOMatchingEntity
	Purpose – To import and export date on the PO line tab on Project contracts form.	
4	Deferred revenue	PMIPDeferredRevenueEntity
	Purpose – To import or export data from Deferred revenue periods form.	
5	Dimension defaults	PMIPDimDefaultRuleEntity
	Purpose – To import or export data from Dimension default rule setup form.	
6	Dimension source	PMIPDimSourceEntity
	Purpose – To import or export data from Dimension default rule setup form for enum field Source.	
7	Facility attribute	PMIPFacilityAttributeEntity
	Purpose – To import or export data from Facility attribute form used for Qualification view.	
8	Facility type	PMIPFacilityTypeEntity
	Purpose – To import or export data from Facility type form used for Qualification view.	
9	Manage subprojects	PMIPManageSubprojectEntity
	Purpose – To import or export data from Manage subprojects form on projects.	
10	Market	PMIPMarketEntity
	Purpose – To import or export data from Market form used for Qualification view.	
11	Pay code	PMIPPayCodeTableEntity
	Purpose – To import or export data from Pay code form.	
12	Personal time off request	PMIPPersonalTimeOffRequestEntity
	Purpose – To import or export data from Personal time off request.	

13	Planned resource forecast	PMIPPlannedResourceForecastDataEntity
	Purpose – To import or export data from Resource forecast form for planned resource.	
14	PMIP_InvAging	PMIP_InvAgingEntity
	Purpose – To import or export data for Invoice aging .	
15	PMIP_ResourceSkillSearchDependentRoleTable	PMIP_ResourceSkillSearchDependentRoleTableEntity
	Purpose – To import or export data from Dependent role on Setup roles form.	
16	Project Contract integration table	PMINProjContractIntegTableEntity
	Purpose – Used for CRM integration.	
17	Project invoicing Archives	PMIPInvoicingArchivesEntity
	Purpose – To import or export data from Invoice archive tab of project invoice grouping form.	
18	Project invoicing group all	PMIPProjInvoicingGroupAllDataEntity
	Purpose – To import or export data from All tab of project invoice grouping form.	
19	Project invoicing group cost	PMIPProjInvoicingGroupCostDataEntity
	Purpose – To import or export data from Expense tab of project invoice grouping form.	
20	Project invoicing group hour	PMIPProjInvoicingGroupHourDataEntity
	Purpose – To import or export data from Hour tab of project invoice grouping form.	
21	Project invoicing group item	PMIPProjInvoicingGroupItemDataEntity
	Purpose – To import or export data from Item tab of project invoice grouping form.	
22	Project invoicing group on-account	PMIPProjInvoicingGroupOnAccountDataEntity
	Purpose – To import or export data from On-account tab of project invoice grouping form.	
23	Project invoicing group revenue	PMIPProjInvoicingGroupFeeDataEntity
	Purpose – To import or export data from Fee tab of project invoice grouping form.	
24	Project type	PMIPProjectTypeEntity
	Purpose – To import or export data from Project type form used for Qualification view.	
25	Project work location	PMIPProjWorkLocationSetupEntity
	Purpose – To import or export data from Assign work location form on projects form.	
26	Projects integration table	PMINProjectsIntegrationTableEntity
	Purpose – Used for CRM integration.	
27	Projects+ integrations parameters	PMINCRMIntegrationParameterEntity

	Purpose – Used for CRM integration.	
28	PSA business unit	PMINCRMBusinessUnitMapEntity
	Purpose – Used for CRM integration.	
29	PSA integration key table	PMINIntegrationKeyEntity
	Purpose – Used for CRM integration.	
30	PSA Resource staging entity	PMINCRMResourceStagingEntity
	Purpose – Used for CRM integration.	
31	PTO balances	PMIPPTOBalancesEntity
	Purpose – Used to import personal time off balances.	
32	Region	PMIPRegionEntity
	Purpose – To import or export data from Region form used for Qualification view.	
33	Resource forecast	PMIPResourceForecastV2DataEntity
	Purpose – To import or export data from Resource forecast form on projects.	
34	Service group	PMIPServicesGroupEntity
	Purpose – To import or export data from Service group form used for Qualification view.	
35	Services	PMIPServicesEntity
	Purpose – To import or export data from Services form used for Qualification view.	
36	Structure attribute	PMIPStructureAttributeEntity
	Purpose – To import or export data from Structure attribute form used for Qualification view.	
37	Structure type	PMIPStructuteTypeEntity
	Purpose – To import or export data from Structure type form used for Qualification view.	
38	Time export lines	PMIPTTimeExportLineEntity
	Purpose – To export data from Time export lines form used for payroll.	
39	Timesheet integration	PMIPTSTimesheetStagingTableEntity
	Purpose – Used for CRM integration.	
40	Transaction group	PMIPTransactionGroupEntity
	Purpose – To import or export data from Transaction group form used for PowerBI reporting.	
41	Utilization targets	PMIPUtilizationTargetEntity
	Purpose – To import or export data from Utilization targets form.	

42	Utilization type	PMIPUtilizationTypeEntity
	Purpose – To import or export data from Utilization type form.	
43	Work locations	PMIPWorkLocationTableEntity
	Purpose – To import or export data from Work locations form.	
44	ProjInvoicingGroup	PMIPProjInvoicingGroupEntity
	Purpose – To import or export data from Project invoicing group form.	
45	Project funding source	ProjFundingSourceEntity
	Purpose – To import or export data from project funding source related to Invoice.	
46	PMIPHcmPersonEducationEntity	PMIPHcmPersonEducationEntity
	Purpose – To import or export data employee education form.	
47	Project address	PMIPProjectAddressEntity
	Purpose – To import or export data project address.	
48	Project invoice journal details	PMIPProjectInvoiceJourEntity
	Purpose – To retrieve project invoices data for our F&O-CE integration.	
49	Adjustment request actions	PMIPAdjustmentRequestActionsEntity
	Purpose – To import or export data from Adjustment request actions setup form.	
50	Adjustment request header	PMIPAdjustmentRequestHeaderEntity
	Purpose – To retrieve header data for an adjustment request from Adjustment request form.	
51	Adjustment request lines	PMIPAdjustmentRequestEntity
	Purpose – To retrieve transaction data for an adjustment request from Adjustment request form.	
52	Category reporting group entity	PMIPCategoryReportingGroupSetupEntity
	Purpose – To import or export category reporting group ID data from Category reporting group setup form.	
53	Category reporting groups	PMIPCategoryReportingGroupsEntity
	Purpose – To import or export category reporting group data from Category reporting group setup form.	
54	Contract agreement types	PMIPContractAgreementTypesEntity
	Purpose – To import or export data from Contract agreement types setup form.	
55	Contract agreements	PMIPContractManagementAgreementsEntity
	Purpose – To import or export contract management header data from Contract management form.	
56	Contract agreement lines	PMIPContractManagementAgreementLinesEntity

	Purpose – To import or export contract agreement lines data from Contract management form.	
57	Contract billing frequency	PMIPContractBillingFrequencyEntity
	Purpose – To import or export contract billing frequency data from Project contracts form.	
58	Contract reason codes	PMIPContractReasonCodesEntity
	Purpose – To import or export data from Contract reason codes setup form.	
59	Contract management buckets	PMIPContractManagementBucketsEntity
	Purpose – To import or export data Contract management buckets setup form.	
60	Employee approver assignment	PMIPEmployeeApproverEntity
	Purpose – To import or export approvers assigned on employee from Employees form.	
61	Invoice grouping translations	PMIPLanguageTxtTranslationsEntity
	Purpose – To import or export invoice translation data from Project invoicing group setup form.	
62	Project contract custom	PMIPProjectContractDataEntity
	Purpose – To import or export billing approvers from the Project contract form.	
63	Revenue adjustments	PMIPRevenueAdjustmentsEntity
	Purpose – To import or export revenue adjustment data from Fee management form.	
64	Subcontractors management	PMIPSubcontractorsManagementEntity
	Purpose – To import or export revenue adjustment data from Contract management form.	
65	Project PWP vendor retention setting	ProjPWPVendorRetentionSettingEntity
	Purpose – To import or export vendor agreement data from projects.	
66	Subcontractors accruals	PMIPSubcontractorsAccrualEntity
	Purpose – To import or export subcontractor accruals data from subcontractor accruals form.	
67	Subcontractors accrual line	PMIPSubcontractorsAccrualLineEntity
	Purpose – To import or export subcontractor accrual lines data from subcontractor accruals form.	
68	Revenue recognition transactions	ProjJournalTransEntity
	Purpose – To import or export revenue recognition deferred transactions data from fee journal form.	
67	Revenue recognition	PMIPDefermentScheduleInstallmentsEntity
	Purpose – To export revenue recognition records from Post revenue recognition schedule form.	
68	Timesheet comments parameters	ProjectEntity
	Purpose – To import or export “Disable external comment validation” and “Disable internal comment	

validation” data from fee journal form.

Load Default Data

What is Default Data

Default data for any application\system is the minimum amount of the information required to start exploring features\functionalities of that application. The Default data in case of Microsoft Dynamics 365 for Finance and Operations, gives you something to experiment with as you learn and helps you see how data is organized in the system. Similarly to become familiar with projects360 module in Microsoft Dynamics 365 for Finance and Operations, default data packages (including standard Microsoft Dynamics 365 for Finance and Operations) have been created making it easier to learn about projects360. These data packages are available on the Microsoft Lifecycle services:

Loading the projects360 default data packages performs the following actions:

- Creates the Project management and accounting setups.
- Creates or sets default parameters that drive behavior of projects360.
- Creates the setups required for using the projects360.

What is Data Package

A Microsoft Dynamics 365 for Finance and Operations data package can consist of one or many data entities. A typical data package consists of a group of entities for a specific task, process, or function. For example, the data entities that are required for general ledger setup might be part of one data package. The format of a data package is a compressed file that contains a package manifest, a package header, and any additional files for the data entities that are included. The following screenshot shows the content of a sample data package containing sample configuration data.

Name	Size	Packed	Type	Modified	CRC32

projects360 Data Packages

Once the data packages are downloaded from your initial configuration environment and the data is finalized,

you can upload these data packages to your LCS project library. Similarly, HSO ProServ has created default data packages with data uploaded from default data environment and user can download these data packages from Microsoft Life Cycle Services(LCS) and import It into the new environment. projects360 data packages can be seen the following screenshot.

-  01 Shared Tables 10.0.zip
-  02 Postal Codes 10.0.zip
-  03 Chart of Accounts 10.0.zip
-  04 Accounts Structure 10.0.zip
-  05 Legal Entity Creation 10.0.zip
-  06 Setup Data for New Legal Entity 10.0.zip
-  07 Project and Projects Setups 10.0.zip
-  08 Release items master data 10 0.zip
-  09 Workflows 10.0.zip

The user can follow the below navigation path to download or import these latest data packages from LCS to their projects.

Lifecycle Services > projects360 LCS solutions (HSO ProServ) > Asset library > Data packages

The screenshot shows the Lifecycle Services interface. The top navigation bar includes "Lifecycle Services" and "Projects+ LCS Solution (SAGlobal)". The main section is titled "Asset library". On the left, under "Select asset type", "Data package (87)" is selected. The main area displays a table of "Data package files". The table has columns: Name, Valid, Version, Scope, Status, Release candidate, Modified date, and Size. The first 9 rows of the table are highlighted with a green border, corresponding to the data packages listed in the previous screenshot. Below these, there are 5 more rows for version 8.1 packages.

Name	Valid	Version	Scope	Status	Release candidate	Modified date	Size

HSO ProServ has data packages with shared and company specific information. The packages prepared are sequenced based on predefined dependencies between data entities. These packages certainly a huge time saver and you don't have to select individual entities and import them one by one remembering their

sequence.

projects360 data package details and the order of importing these packages are as follows:

Shared Tables

This package contains the shared information across the companies. The package includes shared number sequences details, country specific information with address book formats and shared currency details. Note here that all the data entities that were part of the shared data template are automatically loaded and all the level and sequencing of these entities is also inherited from the template setup.

Note – If user faces issue with the number sequence import, the import needs to be re-run again and again until the errors gets resolved and all the number sequences are imported successfully.

Postal Codes

This package contains the postal code details. When user import the codes from this package, the existing ZIP or postal codes are replaced with new codes available in the file.

Chart of Accounts

This package contains the files to load the chart of accounts, exchange rates, financial dimensions and fiscal calendar details. Also this package contains the data for main account categories, main accounts and consolidation groups and accounts to be uploaded.

Accounts Structure

This package contains the details of the account structure, advance rules, account structure rules and criteria. Uploading this package will activate the account structure as well.

Legal Entity Creation

The files in this package allows to create new legal entities. Please change the LEGALENTITYID field to a desired Legal entity ID in the given package file. Uploading this file will create the mentioned legal entity in the system.

Setup Data for New Legal Entity

This package contains the number sequence and ledger details to imported for the newly created legal entities. Please change the legal entity to “XXX” in the environment where user is trying to import data packages files where XXX is a desired- Legal entity id in the given package file.

Note – If a user faces issue with the number sequence import, they need to re-import error records until resolved and import all the number sequences without any issue.

Project and projects360 Setups

This package contains the basic setups for Project management and accounting module along with the projects360 setup data. Please change the legal entity for the following entity files.

1. Project ledger posting definition – Change BorrowingLegalEntity field values to “XXX” and LendingLegalEntity field values to “XXX”.
2. Subledger journal transfer rule entity- Change “LegalentityID” field value to “XXX”.
3. Project intercompany parameters entity- Change “Borrowinglegalentity” field value to “XXX”.

Workflows

This package contains the workflow configurations for the workflows available under the Project management and accounting module. This package file will help in configuring timesheet, expense, invoice proposal, PTO request and timesheet line level approval workflows.

Consume projects360 Data Packages

Default data can be consumed into the Microsoft Dynamics 365 Finance & Operations using ‘Data management’. Users need to follow below process to consume\import the data through data entities which makes the overall data import really seamless for both standard data entities as well as projects360 custom entities that we have developed. The templates which we have prepared are sequenced based on predefined dependencies between data entities saving time and effort of selecting individual entities and importing them one by one.

- Navigate to *Lifecycle Services > projects360 LCS solutions (HSO ProServ) > Asset library > Data packages*.
- Download all the 9 projects360 packages into the local drive on your machine.
- Login to Default data environment and refresh all data the entities to get the latest custom fields and mapping.
- Navigate to *System Administration > Data Management > Click Import tile*.
- Enter the group name for the import.
- Click on the Add file button on the selected entities tab.
- Click on “Upload and add” button and select the data packages saved on the local drive.
- Once the information is loaded, click close on the slide out form to go back to main form.
- On the main, click on the Import button to start the consumption process.

- Look out for the details of the import process on the Execution summary form as shown in the below visuals.

Repeat the above process for all the data packages and then finally import the workflows manually. Follow below steps to import workflow through XML files as the data entities are not supporting for workflows.

- Change the company Id to login company Id in the XML files before importing.
- Navigate to *Project management and accounting > Setup > Project management and accounting workflow*.
- Click on Import button on Workflow tab.
- Import workflow dialog form will open, Click on Browse button and selected the required workflow

XML file.

- Mark Check box “Create new workflow on version conflict” as “True” to create a new workflow.
- Click on Upload button.
- Click OK
- Verify New workflow lines have been created in workflow
- Select the created workflow and click on “Set as default” button.

Follow the above step to import workflows for expenses, personal time off, invoice proposal and other workflows. Do not forget to activate all the workflow versions once its imported manually.

License Management

All the new functionality pertaining to license management is grouped in this section.

[License configuration](#)

License Configurations

Manage Configurations

projects360 provides the configuration keys to activate or deactivate certain Dynamics 365 Finance and operations features or modules out of the box. There are predefined keys containing the combination of modules which service industry often uses.

This feature is designed keeping in mind the box implementations which in turn reduces the implementation timelines.

License configurations allow activation and deactivation of certain forms, fields, and features based on the industry or country requirements.

The License configurations form has been enhanced to allow for easy activation and deactivation of License keys based on one or more License key groups. A License key group has also been predefined to include configuration keys applicable for the service industry.

This feature can easily be extended by creating new License key groups.

It is best practice to set the keys prior to going live in Dynamics, or prior to a complete regression test of all processes.

Security roles

You can find all the new roles created for projects360 along with the duties attached to it.

Role | projects360 employee

Duties
Access expense management workspace
Approve changes to a project
Approve modifications to worker images
Approve modifications to worker professional experience
Approve modifications to worker trusted position history
Committed cost updates
Create performance journal entries
Daily timesheet entry duty
Enhanced preview for released products
Inquire into budget check errors or warnings
Inquire into procurement category guidelines
Inquire into your loaned equipment
KPIDetailsGridDuty
Maintain automatic workflow delegation
Maintain confirmation of product receipts
Maintain create time from my project activities
Maintain electronic time registration
Maintain project timesheets
Maintain rejected confirmation of product receipts
Maintain shopping carts

Maintain the external catalog punchout.
Maintains my project activities
Overtime maintain duty
Pay statement
Pay statements report

Version History

Release Notes v10.0.38

Version 10.0.38.20240119 | Major Release | January 19, 2024

Work item type	Business scenario	Description	VSTS ID	Version
Enhancement	Resourcing	In this improvement, we've implemented several code changes to optimize the performance when opening the project view.	80115	10.0.38.20240119
Enhancement	PTO Balances	In this upgrade, we've overhauled the PTO balance functionality. Now, we've introduced an independent form for this feature, allowing users to import PTO balance records for multiple entities simultaneously. After importing the records, a staging form is provided to review the imported data and make any necessary corrections	80137	10.0.38.20240119
Enhancement	PTO Balances	Through this enhancement, we have expanded the security roles available for the PTO balances report. These additional roles will grant access to PTO reports for a broader range of resources seeking this information	81378	10.0.38.20240119
Enhancement	Annual Holidays	Annual holiday and PTO request features from projects360 now support Start/Stop functionality from Microsoft. This will allow clients using Annual holiday and PTO requests to automatically default the lines on the timesheet.	81651	10.0.38.20240119
Bug	Simple Adjustments	Addressed an issue where admin fee was duplicated when the write up/down functions on the invoice proposal.	77794	10.0.38.20240119
Bug	Invoicing	Corrected an issue where, in certain specific scenarios, the SSRS report for the invoice proposal failed to print the invoice lines.	80151	10.0.38.20240119
Bug	Manage Subprojects	Addressed an issue where Project entity and Manage Subproject entities were allowing the update of project group, but the updates	80505	10.0.38.20240119

		were not correct resulting in issue downstream in the project life cycle.		
Bug	Simple Adjustments	Resolved an issue where transactions were not being adjusted after applying the re-apply sales price function, especially when selecting multiple transactions.	81090	10.0.38.20240119
Bug	Overtime entry	Resolved an issue where the overtime category was not being assigned to overtime lines, even when timesheet lines were marked as overtime after changing the activity ID.	81150	10.0.38.20240119
Bug	Automatic Transactions	Addressed an issue where the automatic transaction batch was encountering errors when the automatic transaction rule was configured using the project group	81152	10.0.38.20240119
Bug	AR by Project	Addressed an issue in the AR by project feature that arose when posting a project invoice with multiple projects and a zero invoice amount. In this case, project ID was not updated against the customer transactions created. Now this is rectified, showing the right project ID for zero values invoices as well.	81164	10.0.38.20240119
Bug	Workspaces	Previously, the user-defined project stages were displaying inaccurately on the fee management list page in the project manager workspace. This issue has been rectified with the latest fix.	81171	10.0.38.20240119
Bug	Misc Changes	Resolved an issue where the Utilization target button was not appearing for employees with more than one employment record in different entities.	81211	10.0.38.20240119
Bug	Time Export	Previously, there were duplicate records showing up in the times export when an employee has changed positions a particular period and there are posted hour transactions exist for that period.	81374	10.0.38.20240119
Bug	Simple Adjustments	Previously, the simple adjustment buttons were appearing on both the adjustment request and simple adjustment forms when	81375	10.0.38.20240119

		accessed from the billing schedule, even when the parameters were set to 'No'. This has now been corrected, and these options are only accessible if the parameters are enabled.		
Bug	Automatic Transactions	There was an issue where the cost price on the transaction created through the automatic transaction process was coming in incorrect. Although the final cost amount was correct, the incorrect cost amount was causing issues back in the Project operations. This is now corrected.	81447	10.0.38.20240119
Bug	Simple Adjustments	The company write up/down function was not generating any fee journal; instead, users were receiving an incorrect error message. Additionally, a new line was being created under the summaries section when the period was set to 'On hold'. This issue has been rectified with the latest release.	81492	10.0.38.20240119
Bug	Fee management	When marking Reimbursable expenses for a progress fee type, the expenses posted for this project were incorrectly listed as non-chargeable, leading to their exclusion from the Invoice proposal. This issue has been rectified in the current release by correcting the billing for these transactions	81554	10.0.38.20240119
Bug	Fee management	Resolved an issue where marking the 'Reimbursable' checkbox on the fee management used to clear the ETC/EAC cost.	81559	10.0.38.20240119
Bug	Workspaces	To address performance concerns, we have introduced a date restriction on the 'My project posted transactions' list page within the Project Management and Approvals workspace. The default start date is now set as n-30 days, with n representing today's date.	81589	10.0.38.20240119
Bug	HR Automated events	Resolved an issue where financial dimensions were not being updated on an employee when a position was assigned during employee creation, even when the	81600	10.0.38.20240119

		'Inherit dimensions from position' was set to Yes in HR automated events parameters.		
Bug	Invoice Archive	Previously, external documents attached to the billing schedule were not being included in the invoice proposal archive PDF. This issue has been rectified with the latest release.	81737	10.0.38.20240119
Bug	Misc Changes	The customer name was not appearing in the timesheet line for projects with multiple contracts when the projects360 parameter was not marked. Upon investigation, it was identified that Microsoft had modified the code to display the customer name associated with the project. Consequently, our custom code has been removed, and the standard code is now being utilized in various other areas such as Daily timesheets, Manage pending time, Timesheet line level approval, and Expense line level approval forms.	81801	10.0.38.20240119
Bug	Time Export	Implemented a minor UI correction on the Time export lines form by renaming the 'Voucher date' field to 'Project date', aligning it with the actual display of the project date in that field.	81818	10.0.38.20240119
Bug	Dimension Default rules	Corrected an issue where, in the dimension default rules form, setting an alternate source to Fixed and leaving the fixed value blank resulted in the financial dimension being pulled from the project, which was incorrect.	81865	10.0.38.20240119
Bug	Fee management	Resolved an issue where the remaining revenue was inaccurately calculated when the contract value is zero, leading to discrepancies on the fee management and fact box.	81891	10.0.38.20240119
Bug	Simple Adjustments	Addressed an issue where an error 'Attempted to divide by zero' was encountered by the user when performing the write up/down functionality on invoice proposal where one of the project has zero invoice amount.	81894	10.0.38.20240119

Bug	Invoicing	Resolved an issue where a rounding error was presented to the user while refreshing lines when both admin fee and retention existed in the same proposal.	81920	10.0.38.20240119
-----	-----------	---	-------	------------------

Release Version Availability

HSO ProServ is committed to delivering predictable version updates. These updates are made generally available as deployable packages that can be consumed from LCS. The timing of new projects360 version releases is shown below as a range of dates in 'Targeted date' column.

- Major releases containing new features are provided four times annually.
- Hotfixes containing only fixes and small enhancements are provided once every month in between major releases.
- In case you have any questions on projects360 releases please contact us [here](#).

Targeted release schedule (dates subject to change)

Release version	Release type	Compatible with MS version	Release status	Release date	Targeted date
10.0.39.XXXXXXXXXX	Major release	10.0.39	Not released		Mar 29, 2024 – Apr 05, 2024
10.0.38.XXXXXXXXXX	Hotfix release	10.0.38	Not released		Mar 01, 2024 – Mar 08, 2024
10.0.38.XXXXXXXXXX	Hotfix release	10.0.38	Not released		Feb 09, 2024 – Feb 16, 2024
10.0.38.XXXXXXXXXX	Major release	10.0.38	Released	Jan 19, 2024	
10.0.36.XXXXXXXXXX	Hotfix release	10.0.36 and 10.0.37	Released	Dec 01, 2023	
10.0.36.20231103	Hotfix release	10.0.36 and 10.0.37	Released	Nov 03, 2023	
10.0.36.20231005	Major release	10.0.36	Released	Oct 05, 2023	
10.0.34.20230831	Hotfix release	10.0.34 and 10.0.35	Released	Aug 31, 2023	
10.0.34.20230728	Hotfix release	10.0.34 and 10.0.36	Released	Jul 28, 2023	
10.0.34.20230630	Major release	10.0.34	Released	Jun 30, 2023	

Note – Targeted dates are dependent on Microsoft GA release dates as well as other external factors. These dates are subject to change.
