1. Introduction

Dino – The app to create your instant extensions

Dino is an app which can help consultants to design certain features in an easy way (NAV) which are no longer possible in the modern client. Like the ability to add a simple field to a page or a report.

The Dino App will allow consultants to create simple apps that can be installed in customer environments. This first version of the Dino App will give consultants the possibility to add one or more fields to a table, using a simple wizard. As such, Dino App will be a similar tool as the page designer functionality in Business Central.

For the use of the app idyn will charge a one-time payment. This will be collected with our PayPal app. When installed you can start creating you own apps. Please not that you will be charged for each extension your create.

1.1. Key features

Key features and benefits

the creation wizard that allows the user to create a table extension. The wizard has 6 steps:

- Define the table extension object no. and field nos..
- Select the table that will be used for the extension with select table.
- Define the field (name, application area, caption, tooltip, field type, extended datatype -> e.g., for masked passwords, etc…)
- Define the new fields on the page (When a code field has been added the new table, page and their field nos. must be defined as well) Define a code field with a table relation to a new table. This new table will then be created with the same code, a description (text [100]), and a list page. (The tooltips, application areas and captions will be automatically created for this table)
- Finish the extension with the PayPal payment extension. After payment your extension will be published and available.

1.2. License Key

You can directly purchase a license key with the associated PayPal extension.
After finishing your first extension you will be prompted to pay with the PayPal app.

1.3. Installation

You can install **Dino in your *Microsoft Dynamics 365 Business Central** production or sandbox environment. When you are going to use the app you need to purchase a license.

> **!** The Dino extension automatically installs 2 other extension the IDYN App management and the PayPal app

2. Installation

There is no setup needed for this app. After installation you can directly create your needed extension(s)

2.1. Business Central SaaS

If you are running the cloud/online version of **Microsoft Dynamics 365 Business Central**, you can find and install the **Dino** app in Microsoft AppSource.

> ❗ The Dino extension automatically installs the idyn App management extension and the idyn PayPal extension. This extensions will monitor the usage and license of the Idyn integrations and the payment process for the use of the Dino App
> .
> the wizard will ask you to allow the request. Please choose always allow.
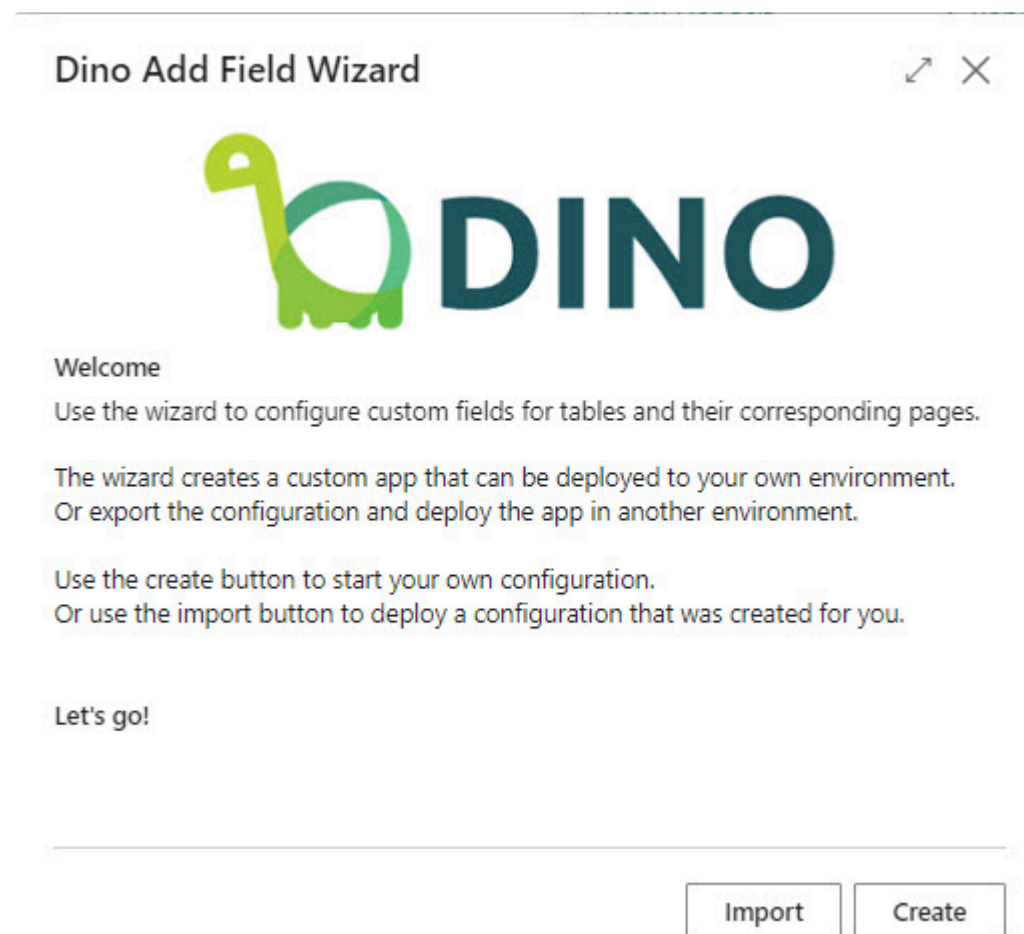

2.2. Business Central On-Premises

If you are running the On-Premises version of **Microsoft Dynamics 365 Business Central**, you can install the **Dino** app using PowerShell and the app runtime package provided by your implementation partner. The on-premises runtime packages can be downloaded from our [website](#).

> **!** The Dino extension automatically installs the idyn App management extension and the idyn PayPal extension. This extensions will monitor the usage and license of the Idyn integrations and the payment process for the use of the Dino App

3. Configuration

3.1. Dino

Dino needs an active license to operate.

Dino Add Field Wizard

Welcome
Use the wizard to configure custom fields for tables and their corresponding pages.

The wizard creates a custom app that can be deployed to your own environment.
Or export the configuration and deploy the app in another environment.

Use the create button to start your own configuration.
Or use the import button to deploy a configuration that was created for you.

Let's go!

Import   Create

3.2. Permissions

Make sure that all users who need to access the app have the **DINO** permission set assigned.
Check if the permission are added to your permission set.

- IDYD DINO
- IDYM APP MANAGEMENT
- IDYNPAY PERMISSIONS

3.3. Customization app

For each design created the Dino app will install the extension in extension management.

4. Paypal

4.1. Creation

The *Pay-pal" app is introduced as an easy payment tool for the Dino extension.
each individual extension created by the user is only valid if the license is updated

To make it more accessible for the user we will charge a small fee for the creation of each extension which can be directly
charged to your paypal account.

4.2. Payment

5. Technical Documentation

If you have used our ISV solutions in the past, you might wonder why you can't change or view our base code in our Business Central apps/extensions.
There's a very good reason for that: **upgradability**.

We've noticed that opening up our base code for changes lead to out-dated software at our end users. Partners didn't want to upgrade customer installations because they had modified the application. So instead of updating to newer versions, partners started demanding bug fixes and new features to be added in out-dated releases. This is unrealistic and unmanageable for an ISV. We maintain the software, fix bugs and add features. It is up to the partner to keep their customers up to date.

In the technical documentation section you will find our technical release notes and we will add a list with all the available events soon.

5.1. Technical Release Notes
