Introduction

Welcome to Spire

Spire is a business management solution for small and mid-sized businesses. Our software is developed with an intuitive interface and a robust database that uses modern technology for efficiency, flexibility and scalability. With Spire, organizations gain a competitive advantage with greater visibility and control of business operations.

Start experiencing the benefits of a business management software designed to meet your business needs.

Profitability

Having all the information allows you to make better decisions that help drive profitable growth. Spire provides valuable data and insight about your business operations in one system so you no longer need to compile data from multiple sources. With this information, you can determine where you can make cost reductions and improve profitability.

Customer Demand

Customer satisfaction is important for growing your business. By optimizing inventory levels and reducing shortages, Spire will help you deliver on time, every time. Have confidence in knowing that you can gain the trust of your customers and meet their expectations.

Efficiency

Improving operational efficiency leads to increased productivity. Spire helps automate and streamline business processes and eliminates manual workflow. As a result, your organization can expand at a quicker pace without the need to hire more employees.

Help Resources

This guide provides detailed information on installing, setting up and using Spire on your system. However should you find yourself with a problem that you cannot answer with the provided tools, please contact your Spire Partner.

When you call your Spire Partner, please be at your computer and prepared to provide the following information:

- Product name and version number.
- The exact wording of any messages that appeared on your screen.
- · Can you reproduce the steps taken prior to the problem?
- How you tried to solve the problem?
- How did you try to solve the problem?

What's New in Version 2.4

- January 2017 Canadian Payroll tables
- Improved Payroll Year End Procedure
- · Prevent payroll year end from being done more than once
- · Block users from posting timecards in January without first performing payroll year end
- · Ability to post payroll timecards to last year to be included in T4s

<u>Click to see Payroll Year end Procedures here</u> <u>Click to see T4 and T4 summary here</u>

What's New in Version 2.3

Attachments on Employees

Job Costing

<u>Click here</u> to go direct to job costing in the manual, including video instruction.

We've made the Job Costing module easy with the use of tabs and eliminated the cumbersome task of entering jobs one at time on pop-up screens. In Payroll, you can enter all of the job cost information before posting timecards and printing cheques. Also, timecards and job cost information can be imported from a spreadsheet or a timeclock export.

Here's a screenshot of how information will appear after data is entered or imported. You'll notice that data is visible even after posting the timecard.

If you are struggling with the amount of time it takes to enter job cost information into timecards, then Spire 2.3 will definitely help speed up the process! Users will only need to enter the hours and job code, and the posting to the overhead is handled automatically. Overhead expenses include:

- CPP Employer Portion
- El Employer Portion
- Worker's Compensation Expense
- Employee Benefits

This saves an extra step for the user as they will no longer need to job cost the employee benefits from Accounts Payable.

What's New in Version 2.2

2.2 New Features:

- The last of the technology upgrades
- AR and AP multiple invoice discounts
- AR and AP void transaction (not just Payment)
- AR and AP payment application over several invoices
- Purchase Order line and footer discounts
- · Allow sorting on account reconciliation bank import
- · Inventory labels from sales orders

2.2 New Reports

- Daily Fill Rate Each days percentage of sales fulfillment compared to back orders)
- Pending Purchase Order Receipts Print a report based on received column on PO before posting
- · Pending Inventory Adjustments Print adjustments before posting
- Inventory Receipts From Purchase Order Receive report as PO receipt is posted
- Receipts Order Fulfillment from Purchase Order List of all items and the orders numbers that can now be filled based on the receipt
- POS Receipt
- Inventory Allocations (on one report see all item commitments and incoming POs)
- 1×2 Inventory Label for Zebra Label Printer

• Inventory Re-Order – (by filtered or selected list, so this can be used by vendor or Product code or any other column)

We've made many report improvements in this release. Legacy reports are no longer required for Spire.

Video Instruction – Version 2.2

What's New in Version 2.1

- Add Optional Service Manager (Equipment tracking module)
- Improve all Sales Tax behavior to make all 4 tax fields available as configured, allow any tax to be set as recoverable
- · Add timecard_entries table to improve Timecard data structure
- · Add Items tab to Sales module
- · Add Items tab to Purchases module
- · Add Receipt tab to Edit Purchase Order to show receipts on this PO
- · Improve GL Transaction screen behavior
- Add sorting in Serial/Lot number List
- · Add sorting to Timecard List
- · Support sorting in a Production Order
- Add Vendor Code Change feature
- · Increase address fields to allow email addresses up to 254 characters
- · Respect new date as logon date if user stays logged in over midnight
- · Show Last Journal Source number used by current user in the Spire status bar
- · Add search capability to ShipTo address lookup list
- · Improve Spire UI to respect US Company
- · Improve error when logging in as an InActive User
- Improve all List view screens
- Update Currency monthly tab when updating currency rate, display no more than 5 decimal
- places
- · Add ability to search for Transaction number in Sales History
- Add Province column to Sales History, Items tab
- · User Defined fields on timecards in Canadian Payroll

All custom Payroll Cheques and Payroll reports will need to be edited to use the new database tables!

Spire Installation

Hardware Requirements

Spire Server

Spire Server is supported on the following Microsoft Windows editions:

Windows 7 (not Home editions) SP1 Windows (not Home editions) 8.1 Windows (not Home editions) 10 Windows Server 2008 R2 SP1 Windows Server 2012 R2

| Minimum | Recommended |
|--|---------------------------------|
| 2.4 GHz quad core processor | i7 or 2.8 GHz Xeon processor |
| 8 GB RAM | 16 GB RAM (or more) |
| Display with native resolution of 1024×768 or higher | Same |
| 512 MB of disk space for Server and PostgreSQL database installation | Same |
| 5 GB of available disk space for data and data snapshots | SSD |
| 100 IPv4 network required to use Spire Server on a Local Area Network with multiple connected workstations | Gigabit Network |

Note: 64-bit operating system is required for Spire Server.

Spire Desktop

Spire Desktop is supported on the following Microsoft Windows editions:

Windows Vista SP2 (until April 2017) Windows 7 (not Home editions) SP1 Windows (not Home editions) 8.1 Windows (not Home editions) 10 Windows Server 2003 SP2 (until July 2015)

Windows Server 2008 R2 SP1 Windows Server 2012 R2

Note: 64-bit operating system is NOT required for Spire Desktop.

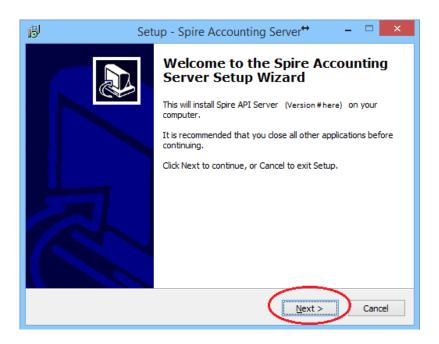

| Minimum | Recommended |
|--|-----------------------------|
| 2.4 GHz quad core processor | i5 or 3.06 GHz processor |
| 4 GB RAM | 8 GB RAM |
| Display with native resolution of 1366×768 or higher (multiple displays and high DPI displays supported) | 1920×1080 or higher |
| Keyboard and pointing device for data entry (Desktop interface does not currently support touch) | Same |
| 100 IPv4 network required to use Spire Desktop on a Local Area Network | Gigabit Network |

Installing Spire on the Server

After you have finished downloading the file(s) you are ready to start the Server installation. Click on the link from your Download screen (or on the file itself from your Downloads folder).

You will see the usual Windows prompt for an executable file. Click on Run.

You will then come to the Install Wizard – press Next to continue.

You will need to define the Port that will be used by the application. By default, it is set to 10880. If this is a new installation of Spire, and you aren't upgrading from BV/BVE, then leave it set to the default. However if you are upgrading, and Essentials exists on this server, then it may be using Port 10880 already by default.

You will need to change one or the other to prevent a conflict. We recommend you let Spire keep 10880 and set Essentials to something else like 10888.

| 🔀 Setup - Spire Accounting Server | |
|--|---------------|
| API Server Port Which port should the API Server use? | |
| Specify the port that the API Server should listen on. Port | |
| 10880 | |
| | |
| | |
| | |
| < Back | Next > Cancel |

The next window discusses Firewall Exceptions – it is recommended you leave this set to the default of Add Exceptions.

NOTE: Only change this if you intend to make some custom network security settings.

| 🔂 Setup - Spire Accounting Server | |
|---|--------|
| Add Firewall Exceptions Add firewall exceptions to allow access from your network | |
| Access to the Spire API Server as well as the PostgreSQL database serve required. | er are |
| If you opt out then Spire will only work on the local machine without many configuration of your firewall. | ual |
| Add Firewall Exceptions | |
| O NOT Add Firewall Exceptions | |
| | |
| | |
| | |
| | |
| | |
| < Back Next > | Cancel |

The next window is for setting the destination folder for installation of the Program Files – we recommend leaving it set to the default.

| 😼 Setup - Spire Accounting Server | |
|---|---------|
| Select Destination Location Where should Spire Accounting Server be installed? | |
| Setup will install Spire Accounting Server into the following folder | |
| To continue, click Next. If you would like to select a different folder, click | Browse. |
| C:\Program Files (x86)\Spire | Browse |
| At least 176.9 MB of free disk space is required. | |
| < Back Next > | Cancel |

The next window is for selecting the Database Location – we recommend using the fastest drive available on the computer, with room for growth.

| k Browse. |

| |

You will need to create a Password for the PostgreSQL Database. This is not the password for individual Spire companies.

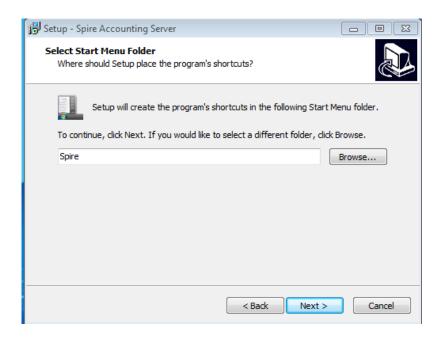

This is a security feature to ensure that there is no unauthorized access to your data.

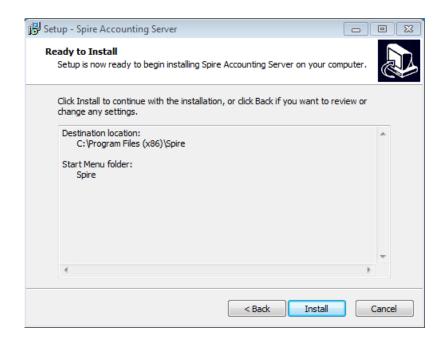

To Add, Delete or Import a Company, or to perform updates, you will need this password. Please make sure you have a record of this in a secure location.

| 弱 Setup - Spire Accounting Server | |
|---|--------|
| Database Superuser Password What should the database password be? | |
| Please enter a password for the superuser (postgres) account Password: Confirm: | |
| | |
| | |
| < Back Next > | Cancel |

The next window defines the location of the Start Menu Folder – we recommend leaving this set to the default.

Click the Install button to begin the installation.

You will be presented with a new window displaying a progress bar.

| 🔂 Setup - Spire Accounting Server | |
|---|--------|
| Installing Please wait while Setup installs Spire Accounting Server on your computer | |
| Extracting files | |
| | |
| | |

Video Instructions

Congratulations, you have completed your installation of the Server software.

Creating a Database

After you have installed the Server software, you are ready to create a New Company.

This is done via the Server software itself (all database activity related to Companies is managed through the Server, not the Client)

Go to your System Tray in Windows, lower right corner of your screen, and click on the Spire icon.

This will bring up the Spire Server Company List. Select the File navigation menu and select Create New Company from the drop down.

| لد | Spire Server Company List | | | | | _ | | × |
|------|---|------------------------|-----------------------------|--|------------------------------|----------------|-------------|--------|
| File | Edit Help | | | | | | | |
| | Create New Company | | | | | | | |

Converting Data

Database Conversion from BusinessVision

After you have installed Spire Server, you can import an existing BV company or restore from a Snapshot (backup).

This is done via the Server software itself (all database activity related to Companies is managed through the Server, not the Client)

Go to your System Tray in Windows, lower right corner of your screen, and click on the Spire icon.

* NOTE: if you have installed Spire on a new machine that had no previous BV installation, then you will need to add Pervasive to the new machine. Spire needs the Pervasive database to read the BV data and convert it to a Spire company.

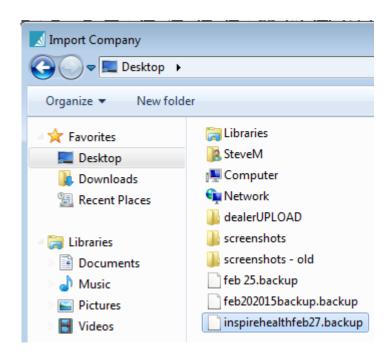

This will bring up the Spire Server Company List. Hit the Plus+ button and select Add Existing Company from the drop down.

| | | | | | | |
| | | | | | | |

Congratulations! You have successfully converted or restored a company to Spire.

To start working in your company, you will need to install and then launch the Spire Client.

Importing Data

Data can be imported into many Spire files. Users can setup a type of import and save it to be able to perform that same type of import later.

Go to Tools/Import and select the type of import that you need to do.

- A. Select the Excel or csv file to import from
- B. Select a location for the import file to move to when complete
- C. Select a location for the import file to move to if it fails
- D. Map each field from the import file to the Spire field name
- E. Click on Match
- F. Select 'Has Header Row' is there is a heading on the spreadsheet
- G. If there is a date in the import. Select the 'Date Format'
- H. Save the .ini file and give it a name that makes sense so it can be used again
- I. Click Import

Imports – Post Immediately

- For Sales Order and Inventory Adjustment imports, there is an option called "Post Immediately".
- For Sales Orders if this is checked the import will be posted as invoices. If not checked they will go into sales orders for invoicing manually.
- For Inventory adjustments the option will post to inventory receipts and the GL. If unchecked they will appear in the adjustments module for review and posting later.

Setting Up a Spire Backup

To create a Snapshot of Spire data you will need to do the following:

- Open Spire Server Tray
- · Double click a company
- Choose Interval
- Select time to perform snapshot
- · Select how many snapshots to save

Snapshots will be saved in on the server in C:\Programdata\Spire\Snapshots

This folder also contains all custom reports

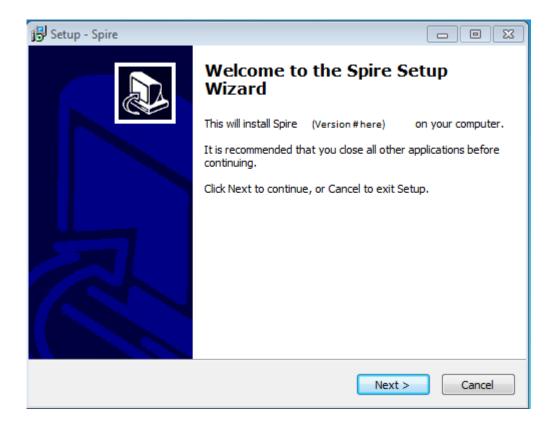

Important – Backup contents of C:\Programdata\Spire\Snapshots to an external device and store offsite.

Installing Spire on a Workstation

After you have finished downloading the file, you are ready to start the Client installation. Click on the link from your Download screen (or on the file itself from your Downloads folder).

You will next see the Spire Setup Wizard. Click Next to continue.

You will be asked to select an installation location. We recommend leaving it set to the default.

| 🔂 Setup - Spire | |
|---|-----------|
| Select Destination Location Where should Spire be installed? | |
| Setup will install Spire into the following folder. | |
| To continue, click Next. If you would like to select a different folder, clic | k Browse. |
| C:\Program Files (x86)\Spire | Browse |
| | |
| At least 133.6 MB of free disk space is required. | |
| < Back Next > | Cancel |

Next you will be asked about setting Desktop and Quick Launch Icons – set preferences as you wish.

| 🔂 Setup - Spire | |
|--|-------------|
| Select Additional Tasks Which additional tasks should be performed? | |
| Select the additional tasks you would like Setup to perform while installing dick Next. | Spire, then |
| Additional icons: | |
| Create a desktop icon | |
| Create a Quick Launch icon | |
| | |
| | |
| | |
| | |
| | |
| | |
| < Back Next > | Cancel |

You are ready to proceed – click Install.

| 🔂 Setup - Spire | |
|---|---------|
| Ready to Install Setup is now ready to begin installing Spire on your computer. | |
| Click Install to continue with the installation, or click Back if you want to rev change any settings. | view or |
| Destination location: C:\Program Files (x86)\Spire | * |
| Start Menu folder: Spire | |
| Additional tasks: Additional icons: Create a desktop icon | |
| ٠ | |
| < Back Install | Cancel |

You will see a Progress Bar.

| 🔂 Setup - Spire | |
|---|--------|
| Installing Please wait while Setup installs Spire on your computer. | |
| Extracting files C:\Program Files (x86)\Spire\Desktop\Modules\CreditRebill.pyz | |
| | |
| | |
| | |
| | Cancel |

You will be notified that the installation is complete.

| 🔂 Setup - Spire | |
|-----------------|--|
| | Completing the Spire Setup Wizard |
| | Setup has finished installing Spire on your computer. The application may be launched by selecting the installed icons. |
| | Click Finish to exit Setup. |
| | 🔽 Launch Spire |
| | |
| | |
| | |
| | |
| | |
| | Finish |

You may then launch the Client and log into a Company.

Backup & Restore

Spire's Snapshots and restore is done on the server. The snapshot creates a single file a fraction of the size the original PostgreSQL data that can then be copied off site. The restore function points to that single file and re-creates the original Spire dataset.

The Snapshot is not a backup!! Until the files are copied to an external device taken off site or to a cloud backup service, they are not safe....

Backup

To backup Spire data click on the tray icon on the server. It may be on the task bar or the user may have to click the little 'up arrow' on the tray to see the hidden icons.

When the company list comes up double click on the one to set a snapshot for.

| # Snapshots to Keep | 10 | | ~ | | |
| | ОК | | Cancel | | |

Interval

- Never -Do not create a snapshot.
- Hourly Create snapshot very hour.
- Daily Create a snapshot every day.
- Weekly Create a snapshot every week.
- Monthly Create a snapshot every month.

Next Snapshot – The date/time for the next snapshot. **#Snapshots to Keep** – How many snapshots to store.

The snapshots will be stored in C:\Programdata\Spire\Snapshots

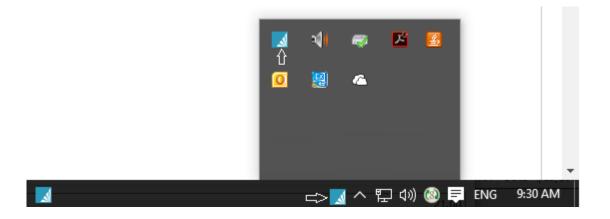

Make sure to backup the complete contents of C:\Programdata\Spire. That way the custom reports will also be included.

The Snapshot is not a backup!! Until the files are copied to an external device taken off site or to a cloud backup service, they are not safe....

Restore

To restore a Spire dataset go to the Spire tray icon on the server.

When the company list is displayed, select add, and then 'Add Existing Company'.

| Spire Server Company | / List | | | _ | | \times |
|--|--|----------------|------------------|-------------|----------|----------|
| File Edit Help | | | | | | |
| + × | | | | | | |
| Company Name Inspire Health Systems | Database Inc InSpire | Size 45.2 M | Next Snapshot | Last Succes | sful Sna | pshot |
| Inspire Health Systems | (UDF) InSpireUDF | 42.1 M | in 23 hours | | Jus | t now |
| 🗾 Import Company | | | | ? | \times | |
| | C: \ProgramData \Spire nSpireYE2016 | e\Snapshot | s\InSpire.backup | Brows | e | ľ |
| Snapshot | | | | | | |
| Interval | Daily | | | | • | 00 |
| Next Snapshot | 4/15/2016 10:31:23 | 3 AM | | | • | |
| # Snapshots to Keep | 10 | | | | - | |
| | | | ОК | Ca | incel | |

Company to Import – Browse to the snapshot file to restore.

Datbase Name – Select a unique name for the database. If the company that is being restored already exists then select a different name. In this example we are selecting a year end backup so we appended YE2015 to the end of the name.

Interval – As this is a database that was not previously on the list the snapshot intervals must be setup.

Next Snapshot – Displays when the next snapshot will occur.

#Snapshots – How many snapshots to save.

Warning – If the data restored is given a different name than origianly then the custom reports will not be available. The custom reports are stored in the folder C:\Programdata\ Spire\Reports\DatabaseName, where Database name is the one assigned in the Spire Tray.

Backup & Restore Video

Video Instruction – How to create a snapshot of the Spire data so it can be taken off site. How to restore a database back into Spire.

Company Setup

Company Settings

Once you have Spire installed on the system you will need to modify both the company and user permissions in accordance with your specific internal requirements. Begin with the Company Settings as pictured below.

General Ledger

In this section, you can modify the General Ledger settings. There are several tabs to complete data entry that include; General, Fiscal Periods, Segments, Groups, Subgroups, and Allocations.

| Company Settings | | |
|-------------------|--|---|
| 88 | Search | |
| Company | General Accounts Fiscal Periods Historical Periods Allocation Accounts Segments Groups Subgroups Special meaning can be applied to one or more segments in Spire. These settings will effect which accounts transactions are posted to. Second | |
| General Ledger | Location | |
| Reports | The location segment typically denotes a branch of the company which maintains separate balance sheet and income statement accounts. Location Segment Disabled | Ŧ |
| Email | Profit Center | |
| Multi-Currency | The profit center segment denotes a function of the company for which separate income statement accounts are maintained. | |
| Special Accounts | Profit Center Segment Disabled | Y |
| Sequence Numbers | Contract Cost Differential G/L Account | Q |
| √x Variables | Miscelaneous | ~ |
| Employees | Enable Job Costing | |
| Sales Departments | Enable Divisions | |
| Purchase Orders | Enable General Ledger | |

Location – If one of your segments in the GL has been designated for Location, use this setting to define that segment. Then when you log into Spire, the user will be presented with a list of locations. The one they choose will be where all postings will go to. This is a much easier method to track locations than using GL divisions.

Profit Center – Similar to locations, a segment can be designated as a profit center. Then specific postings can be re-directed as required.

Contract Cost Differential Account – A GL account can be selected to post cost differences when using contract costs for customers. This way, each customer can have their own cost. The cost is entered on the vendor cost field in price matrix. This vendor cost only appears if this differential account has been configured.

The difference between average cost and the contract cost gets posted to this account. That way, inventory is always relieved of the average cost and difference goes here. The cost of goods is posted at the customer's contract cost. This then achieves the proper cost of goods and profit even if the customer's contract cost is lower than average cost.

Enable Job Costing – When checked, the income and costs will get posted to the job. If not checked, the job info will still be posted to sales and purchase history.

Enable Division – When enabled, division 000 becomes the consolidated company; and when a user posts to it, it updates 000 and the current division.

Enable General Ledger – If unchecked, postings will only go to the sub ledgers. This is typically used during initial setup. Users will be warned when logging in that the GL is disabled.

Fiscal Periods

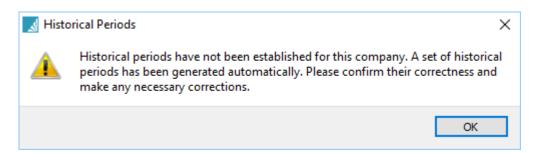

The Fiscal Periods tab is where the company yearend is decided. There is also a place to lock periods that are complete to prevent accidental posting. Note that 3 fiscal years are available for posting. When the yearend function is performed, last year gets moved to GL history and can no longer get posted to.

| E | Accounts Payable | | | | | | |

Historical Periods

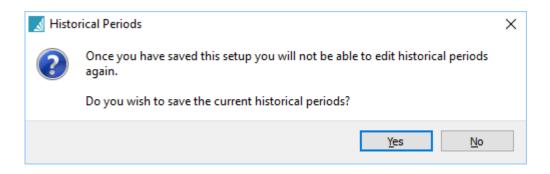

This is where historical periods are displayed. Each year shown has history posted in it. The first time a user clicks this tab they are able to define historical periods. It defaults to the same as the current fiscal periods, but if a company has previously changed their year-end, they can edit this tab to match history. Once set and accepted it can take some time to save.

This must be defined before the first Year End is processed, if you have imported data from another accounting system.

| Ge | eneral | Fiscal Perio | ds | Segments | Groups | Subgroups | Allocations |
|----|--------|--------------|-----|----------|--------|-----------|-------------|
| Cu | urrent | Historical | | | | | |
| | | 2013 | | 2012 | | | |
| 1 | 04/30/ | /2012 | 04/ | 30/2011 | | | |
| 2 | 05/31/ | /2012 | 05/ | 31/2011 | | | |
| 3 | 06/30/ | /2012 | 06/ | 30/2011 | | | |
| 4 | 07/31/ | /2012 | 07/ | 31/2011 | | | |
| 5 | 08/31/ | /2012 | 08/ | 31/2011 | | | |
| 6 | 09/30/ | /2012 | 09/ | 30/2011 | | | |
| 7 | 10/31/ | /2012 | 10/ | 31/2011 | | | |
| 8 | 11/30/ | /2012 | 11/ | 30/2011 | | | |
| 9 | 12/31, | /2012 | 12/ | 31/2011 | | | |
| 10 | 01/31 | /2013 | 01/ | 31/2012 | | | |
| 11 | 02/28 | /2013 | 02/ | 29/2012 | | | |
| 12 | 03/31/ | /2013 | 03/ | 31/2012 | | | |

Once the user clicks 'Save' they get this message and clicking Yes saves the historical periods and cannot be edited again.

Allocation Accounts

A User can add Allocation accounts that can be used to post to more than one account. You can set up the percentage to post to each 'real' account. That way, the user posts to a single account and it disperses it based on those percentages.

Segments, Groups, Subgroups

Segments

Segment structure is used to define how many segments are required and the length of each. You can also decide if the segment is to be numbers, letters or a combination. You can have up to 4 segments, totaling 24 characters each.

Reports

In the Reports section, you will be able to adjust your security preferences on how your company can process reports.

Disable security – With this setting, all users will have access to all reports for the modules that they have access to.

Enable Security – With this turned on, you will set the default reports that are given to each new user that is added.

Email

Setup

The Email section is where you will add the email address and outgoing mail server information in order to allow you to use the email function in Spire. If the user email is not setup, then this can be used as their email settings. Some companies just setup the company email and all email comes from this account.

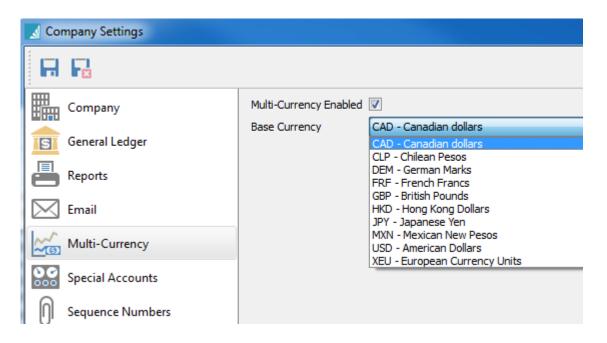

| Company Settings | | |
|-----------------------|---|--------|
| 88 | | Search |
| Out | nable Email Igoing Server Information | |

| Special Accounts Disp | alay Name InSpire Health Accounting | |
| <u> </u> | al Address accounting@inspirehealth.com | |
| | C copies to accounting@inspirehealth.com aly/To Address accounting@inspirehealth.com | |
| Employees Rep | | |

- SMTP This is the internet providers SMTP info
- Username Usually their email address.
- Password Usually their email password. If the provider does not require secured SMTP this may be left blank.
- Encryption Many providers require encryption to be on.
- Encryption Ports 25, 465 and 587 are common.
- Display Name The name of the sender.
- Email Address The senders email address.
- BCC copies to The address the sender wants copies of the email sent to.
- Reply-To Address When the recipient replies, who will get the message?

It can sometimes be difficult to get the correct information from the internet provider. Always test with a known address to prove all the necessary firewall settings are correct.

Multi-Currency

The Multi-Currency section can be enabled if you require currency conversion for customers and vendors in multiple countries. Choose the currency that you conduct your business in.

Special Accounts

Special Accounts are required to setup the company's integration between the GL and the sub ledgers. It is important that these are selected carefully as this controls the company's financial information. The user that sets these up should have a good understanding of accounting or have someone with that knowledge review these settings before posting anything.

Special Accounts

Current Earnings – The current earnings are calculated automatically as sales and expenses are recorded. The current earnings balance is, income minus costs and expenses. Current earnings start at zero at the beginning of each year. The amount is not shown in the account or on the trail balance as is a calculation.

Accounts Receivable – The default AR GL account that is used when adding a new customer. There can be more than one AR account so the company can track groups of customers receivables separately.

Accounts Payable – The default AP GL account that is used when adding a new vendor. There can be more than one AP account so the company can track groups of vendors receivables separately.

Sales (revenue) – The default account that will be used when adding an invoice directly into the accounts receivable account. It is also the default account used for inventory sales if it is not changed using inventory "Sales Departments"

Purchases (expense) – The default GL account that will be used when posting an AP invoice if a vendor does not have one set.

Cash Receipts – The GL account that customer accounts receivable payments will be posted to by default.

Bank Account – The default company bank account.

Freight Charged – The GL account that freight will be posted to in sales invoicing.

Inventory-on-hand – The account that inventory will be debited to on receipts and credited on sales. If inventory sales departments are used then this can be changed to another account for each department.

Cost of goods sold – The account that invoices will post cost of goods to. If inventory sales departments are used then this can be changed to another account for each department.

GST – The GST/HST collected account used to charge customers on invoices and AR entries. (Canada)

PST – The Provincial Sales Tax account charged to customers on invoices and AR entries. (Some Canadian Provinces)

Sales Order Deposits – The account that is used to post customer deposits in a sales order. This is usually set as a current liability account.

Accrued Purchases – The GL account that is used to post purchase accruals if a vendors invoice is not posted at the same time as receiving the inventory. The inventory account is debited and this account is credited. Then when the invoice is received the user goes into the purchase order and clicks the invoice button, and the accrual is reversed.

Accrued Freight Charges – This account is used to post the landed freight on a purchase order. The landed freight on a purchase order is added to the inventory value and credits this account with that same amount. When a freight bill is received the user manually posts the amount to this account. In theory this amount will zero out if the amount accrued and the freight are the same. Inevitably these amounts are not always the same so this account should be manually reconciled regularly.

Accrued Duty and Brokerage – Same as accrued freight except for Duty and Brokerage.

Inventory Variance – The account used when purchase order receipt value does not match the accounts payable entry. This account can either be a cost of goods or expense. Some companies like to set this account as an asset and then manually disperse the variance to other accounts monthly.

Freight Expense – The default account used for freight expense on a purchase order if the freight is entered on the footer of a PO (not accrued freight). There is a company setting that makes the PO footer freight add to the value of the inventory instead of posting to freight expense. (Company Settings/Inventory/ Enable Landed Costs)

Retained Earnings – When a year end is processed, the current earnings from 'Last Year' are rolled into this account. Posting can be made to this account if a closed year needs to be adjusted.

*Currency Gain/Loss – When there is a difference in the currency rate from when an invoice in AP or AR is entered and when it is paid that amount gets posted to this account when posting the payment. This account is also used to post the difference when 'Currency Revaluation' is performed in the GL.

Billing

(These are read only and set above)

Accounts Receivable Sales (revenue) Freight Charged Inventory-on-hand Cost of goods sold GST PST

AR Accounts

(Most are read only and set above)

Accounts Receivable Sales (revenue) Cash Receipts Inventory-on-hand Cost of goods sold Currency Gain/Loss Finance Charges – The GL income account that will be used when adding finance charges in accounts receivable. **Optional Entry** – This account will be added as an additional account when entering an invoice. The user can always add any account to an AR entry but if there is one common one used then add it here.

Discount (CR) Given – The account that is used when an early payment discount is given in accounts receivable.

Write-off (expense) - The account used when an AR entry is written off.

AP Accounts

(Most are read only and set above)

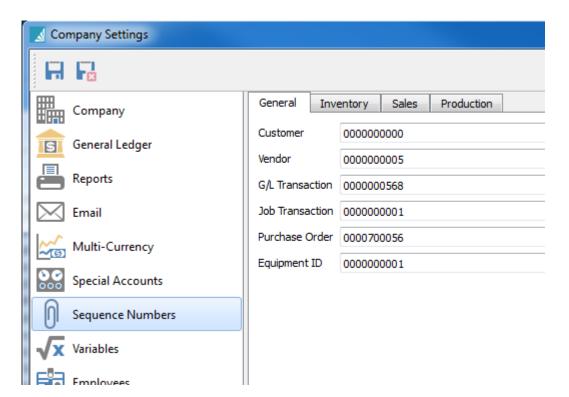

Accounts Payable Purchases (expense) Bank Account Currency Gain/Loss Discount Taken – Account used to post early payment discounts in accounts payable.

Point of Sale Accounts

Cash Receipts – Set above **Optional Entry 1 – 6** – Add up to 6 additional payments that are used in invoicing and POS.

Sequence Numbers

The Sequence Numbers section will allow you to set the starting number for a type of transaction or record that you will create in Spire.

Purchase Orders

Post to Accounts Payable – When checked, the inventory receipts on POs will be accrued if received before obtaining the vendors invoice. Once the invoice is received, the AP entry is done from within the PO and the accrual is reversed. If the invoice is available on receipt of inventory, then the AP entry is posted without the accrual. If this setting is off, there are no GL postings or AP entries done when receiving a PO. (not recommended)

Allow over-receiving – If checked, then the user can receive more than what was ordered on a purchase order.

Enable landed costs – If checked, purchase orders accrue freight and duty on receiving.

| mventory | Prices | |
| Production | Automatically update customer price table | |
| Rental | Create records for shipping address only | |

Orders Tab

Separate orders by division – With this option set, a user only sees the orders from their own division.

User selectable kit components – Kits will explode onto a sales order after allowing the user to select the components required.

Match lowest price in price matrix – The lowest price will get selected even if the customer's specific price is higher.

Use customer's default warehouse – If this is selected, the warehouse that is set for a customer will get used on a sales order instead of the one in inventory.

Use serial/lot number costing – Costing for sales history will come from the serial/lot number instead of the inventory item. The GL cost posting will still be derived from the costing method set in company setup.

Use serial/lot number selling – Sell price will come from the individual serial/lot number.

Use cost from inventory for non-physical items – If selected, the cost will come from inventory. If it's not selected, the cost will be zero but allow the user to edit it on the sales order line.

Use caution with cost on non physical items. Be sure that the sales dept used does not credit the inventory GL account, unless the user makes sure that a corresponding AP entry gets debited to the inventory asset account.

Allow overcommitting inventory – Inventory will be able to be oversold.

Prohibit negative inventory – Inventory will not be able to be oversold.

Always ship (disable order and back order quantity) – Inventory levels will not be used to decide what to ship. In this case, everything will ship and there will be no back orders kept.

Require salesperson on orders – Order will not be able to be saved without a salesperson.

Require territory on orders – Order will not be able to be saved without a territory.

Default salesperson with username if customer salesperson is blank – If there is no salesperson on a customer, and the salesperson code matches the logged in user code, the code will be automatically entered in the salesperson field of the sales order.

Set default required date – Set a required date on the sales order.

Days before an order is required – Number of days ahead the default required date (above) will be set to.

Warn on zero price – Warn user if an item is added to an order without a price.

Automatically update customer price table – If set, every item and its price on a sales order will be added to the customer's price list.

BE CAREFUL because if you sell to the customer at a onetime low or zero price, it will remember it.

Create records for shipping addresses only – Prices will be set for the shipping address of the sales order instead of the billing address.

Processing / Invoicing

| Vendors | Check credit limit when processing orders | Post Standard Cost to Sales History Current Cost |
| | Disable credit for customers over terms | |
| Accounts Receivable | Check credit when saving | |
| Accounts Payable | Check credit based on ordered quantity | |

Enable process status – When enabled, the Process feature will be turned on.

Enable Shipped status – When enabled, the Ship feature will be turned on.

Prohibit processing orders twice – Will not allow an order to be processed more than once unless user has override security setting.

Lock processed orders – If an order is processed, it cannot be edited without the correct user setting.

Prompt on zero freight amount – Warns user if they try to invoice an order without freight.

Apply tax to freight – Check if freight needs tax 2 applied.

Zero freight after invoicing – After an invoice is generated and if there are back orders, the freight will get zeroed out.

Percentage Charge – % charged on shipping method by default.

Minimum Charge – Minimum freight charged.

Maximum Charge – Maximum freight charged.

For Orders Below – Freight only charged if sales order is below this amount.

NOTE: Above freight settings are overridden by the same settings that can be applied to each shipping method.

Order Invoicing

User selectable invoice numbers – Users can override the next invoice number. It gets added to the sales order before invoicing and can be an alphanumeric number that has not yet been used.

Batch Posting

Live Posting – Order gets posted as soon as the user clicks invoice.

Batch Posting – Order gets an invoice number added to it when the user clicks invoice, however, they stay in orders until someone 'batches' them. With this option, the invoice can be corrected/edited up until the user posts the batch.

Customer Credit

Require credit authorization –Orders/invoices must be credit authorized before they can be saved and/or invoiced.

Check credit limit when processing orders – Credit is checked when order is processed.

Disable credit for customers over terms – Credit is checked for terms in addition to credit limit.

Check credit when saving – Credit is checked when the order is saved, not just processed.

Check credit based on ordered quantity – Credit check is based on the order value instead of just the value that can be shipped. It includes back ordered items.

Inventory

Post FIFO Cost to Sales History Current Cost – FIFO gets posted to current cost in sales history.

Post Standard Cost to Sales History Current Cost – Standard cost gets posted to sales history instead of current cost.

Standing Orders

Reset phase when invoicing standing orders – Phase gets reset each time the standing order gets invoiced.

Backorders

Allow fill back orders on processed orders – Will ship items on a processed order if the items are now in stock.

Not recommended as the order may already be picked.

Use suffix on order number to manage backorders – All sales orders will start with a -0 and will increment each time an order is invoiced and still has back orders. It goes as high as –Z.

Create back orders while invoicing – If using batch invoicing, a new order will get created on invoicing instead of when the invoice gets batch posted.

Reset phase when invoicing with back orders.

Surcharges

| Company Settings | | | | | |
|-------------------|---|--|--|--|--|
| | | | | | |
| Company | Orders Process/Invoicing Surcharges Messages Misc | | | | |

| Sales Orders | | | | | |
| Employees | | | | | |

Surcharges can be set to automatically be added to the footer of an order, much like a tax. The surcharge amount or % is set in editing of Product Codes. This can be used for 'Fuel Surcharge' or 'Shop Supplies' etc.

Tax code 1 applies to surcharge – Charge tax1 on the surcharge.

Tax code 2 applies to surcharge – Charge tax2 on the surcharge.

Min – Minimum amount to charge.

Max – Maximum amount to charge.

G/L account – GL sales account to post the surcharge to.

Alias – What the company calls the surcharge (ie – Shop Fees, Fuel Surcharge).

Price Check Warning – Warning to prompt user if an item is sold below the expected margin. This margin is set in Edit/Product Code.

- Message Custom price check warning message that is given to the user can be entered here.
- **Display in POS** Display the price check warning in POS.
- **Display in Sales Orders** Display the price check warning in Sales Order.

Warning Messages

Display warning when POS over commits inventory.

Display warning when a duplicate purchase order number is used.

| Variables | Sales Order Number |
| Sales Departments | Allow users to set Sales Order number on new orders |
| Purchase Orders | Recurrence Default Repeat None |
| Sales Orders | |
| Employees | |

Point of Sale

Always prompt for customer – If set, each time a user creates a POS order, they will be prompted to enter a customer. Otherwise a default 'cash' customer can be set and used.

Accumulate Items – If an item is added to a POS order more than once, the quantity is increased instead of adding the item to the order again.

POS multiplier – The user can use a shortcut character to multiply an item in POS. ie. if the multiplier is set to * then when 6 of an item are required the user would enter 6* and then scan or type the item.

Home Page – An html location to display in the left hand pane of the POS. This is used for display ads to the screen.

Credit/Copy

Retain Order number on Copy and Credit in Sales History – If set, the same order number will be copied from history. If not, then it will get the next available order number.

Convert quotes to Sales Orders with next Order Number – This will change the Quote number to the next available sales order number. The original Q number gets saved as well.

Sales Order Number

Allow users to set Sales Order number on new orders – Users can override the next available order number in sales orders.

Recurrence

Default Repeat – Select None, Daily, Weekly, Monthly or Yearly for the default repeat cycle on a standing sales order.

Payroll

These settings are used to define each payroll department. Then, each employee would be added to one of the departments. If a department is not set for an employee, then they default to department 1.

Address Defaults – Set the default address that will be used when creating a new customer.

Unique Ship To – Check this if you require each ship to ID to be different across customers.

Contact Labels – Contacts 1, 2 and 3 can have a label added to define what the contact is used for; i.e. if you always want contact 3 to be used for accounts payable, then change the label to 'Accounts Payable'.

Shipping

Terms – Customers default terms.

Ship Via – Customers default shipping method.

Taxes – Default taxes for a new customer.

Sales

GL Account – Default GL account that will be used for a customer if the setting to override the inventory sales account is selected (below).

Override Sales Account – Use this to override the sales GL account selected in the sales department used for inventory items.

Credit Type – Default credit type for a customer. Choose either No Credit, Unlimited or Limited.

Credit Limit – Default credit limit for a new customer.

Vendors

| Ð | Accounts Payable | | |
| 9 | Inventory | | |

Warehouses

Multiple Warehouses – Select if you require more than one warehouse.

Receiving/Transfers

Post adjustments to GL – When adjustments are made they will get posted to the GL.

Default Adjustment Account – Default GL account to post inventory adjustments to. User can override the account on each adjustment.

Transfer Markup Account – If a markup is required when transferring inventory, then a GL account will be required to post the markup to. Typically a sales account is used here. It will then debit the percentage set below to the inventory account setup for the receiving warehouse and credit the sales transfer markup account.

Default Markup Percentage – What default percentage will be used for inventory transfers if setup above.

Landed Costs

Accrued Freight % – What default percentage will be used on a purchase order for freight.

Accrued Duty and Brokerage % – What default percentage will be used on a purchase order for duty and brokerage.

Enable Landed Costs – If "Enable Landed Cost" is on in the Company Settings, Inventory, then in purchase orders the vendor's freight cost will get included in the cost of the items received. If it is not on, then the freight amount will get posted to freight expense.

Save Landed Costs – Automatically save the freight and Duty/Brokerage percentage entered on a purchase order to inventory for future orders.

Serialized Inventory

Use Serialized Inventory – Use serial numbers.

Upon Receipt – Serial numbers are received into inventory for later selling. Otherwise, you can enter manual serial numbers on a sales order.

Miscellaneous

Cost Method – Choose Average or FIFO

Default Stock UOM – When adding a new item to inventory it will default to this unit of measure.

Prohibit overshipping – Inventory cannot be consumed below zero on hand.

It is not recommended that the company allows over committing of inventory as the cost that will be used in sales and production will not be accurate.When a PO is received for an item

that was negative and the cost was different, the difference will be posted to the cost of goods account for that item.

Enforce Product Codes – Require product codes when adding inventory items.

User permissive FIFO (*not recommended*) – Allow over shipping of inventory when set to FIFO.

Production

Tax Code – The code for this tax that can now be added as the default to customers for invoices and AR and to vendors for purchase orders and AP.

Description – Description of the tax.

Short Name – Name that shows on sales orders, purchase orders, AR and AP.

Rate – The percentage rate to charge for this tax.

Use Partial Tax Rate – Set if this tax can be charged partially for some items.

Partial Rate – The percentage to charge if set to a partial rate.

GL Account – The GL account to post this tax to.

GL Credit Account – Add a GL account if this tax will be used for input tax credits. Usually for countries that have Value Added Tax (VAT) or GST/HST in Canada,where the tax paid by companies is recoverable against the tax that is collected from customers.

Apply to freight – Is this tax to be charged on freight.

Apply to surcharge – Is this tax to be applied to sales invoice surcharges as setup in Company Settings/ Sales Orders/Surcharges.

Communication – Add any number of notes related to this tax.

User Defined – User defined fields can be added to track and/or print. (Spire UDF license required)

Include in Inventory landed cost – When this is checked and the tax is on a purchase order, this tax will be added to the cost of the items on the PO. If un-checked then the tax will be posted separately into the GL account selected as "GL Credit Account". When the tax is recoverable like VAT or HST this is setting is unchecked.

Product Code – Assign a code to the product.

Description – The description of the product code.

Margin – The lowest margin that this product code should be sold for. If the user sells for less than this margin, the sales order line margin will appear in red. Optionally, a message can pop up to the user if they

sell below this margin. Setup the message in <u>Company Settings/Sales Orders/Messages/Message</u>. It can be set to pop up on a sales order and/or POS. The user can choose to accept the price or edit it.

Phase Code – A code for this phase

Phase Type – Select Sales Order, Production Order or Purchase Order. This phase will be only available within that module.

Description – A description for the phase.

Report Type – Enter a report template name for this phase. When the order moves into this phase all Crystal Reports with that template name will be presented to the user for printing. If no template is entered then the reports dialog will not come up.

Next Phase – When the user selects 'Next Phase' from inside the order or from the order list the order will move to this phase.

Promotion reasons can be added to a price matrix record. When used, the reason code will have this name and colour on the sales order line.

Code – A code for this promotion

Description – The description of the promotion code

Cumulative – When checked, and quantity breaks are used, all items that have the same promotion code will be added together to calculate the quantity break price.

For example if all of product "WEIGHT' are in the same promotion code and we have a lower price if they buy 6, then when 3 20 pound weights and 3 30 pound weights are put on the sales order it will give the quantity pricing to both items.

Text Colour – The colour of the text for this promo code.

Background Colour – The colour of the background for this promo code.

Video Instruction

This video shows how to use Spire's cumulative pricing to do quantity breaks across multiple items.

Email templates can be used throughout Spire for sending email merges with customers and vendors. A template can be setup so that the user does not have to type the email each time it is sent. Some of the merge fields can also be used to merge into the email.

Insert – User can insert merge fields into the template

Private – Marks the template for your own use and it is not visible to anyone else.

Template Name – Meaningful name for the template.

Subject – The email subject for the template.

Body – The contents of the email.

Video Instructions – Email Templates

User Settings

Creating a New User

To create a new user you will need to have access to the user settings, select User Settings from the Edit menu in the main Spire window.

Create/Modify Company Filters – User can create company-wide filters instead of just their own.

Allows Change Warehouse – User can switch to another warehouse.

Allow Change Division – User can switch divisions.

POS User Only – The POS module will get launched automatically and the user cannot open other modules.

Validate Product Code – Product codes added to inventory must exist.

Default Warehouse – The user's default warehouse.

Default Division – The user's default division.

Access Communications – Allows user to have access to the Communication module.

Edit Communications – Allows user to edit communications.

Restrict Location to – Sets user to one location and not allow them to switch.

Edit Company Settings – Allow user to edit company settings.

Edit User Settings – Allows user to edit user settings.

Can Lock Windows Settings – Once the column layout is set, allows the user to lock them.

Can Clear Windows Settings – Allows user to clear layout to default.

Confirm Application Exit – When exiting program asks the user is they are sure they want to exit.

Export Currencies – Allows export of currencies.

Export Jobs - Allows job export.

- Add Sales Tax Allows the user to add new sales taxes.
- Edit Sales Tax Allows editing of sales taxes.

Delete Sales Tax – Allows deleting of sales taxes.

Edit UDF Structure – Allows creation and editing of User Defined Fields.

Reports

Once the company defaults are set for reports, each user can be set to what reports they are allowed. Each report can be set to Preview, Print, Export and Email. This screen also shows the template and Crystal Report .rpt name of each report including custom ones..

Enable Report Development Tools – When this is checked a screen shows up every time the user prints, that includes all of the parameters that can be used for reports printed in this module. It also shows the template name that determines where the report should be presented.

Report Security – Each user can be set to:

- Company Default Sets the user the same as the security was set in company settings.
- Enable When checked each report that the user can see needs to be set.
- **Disable** When checked the user gets full access to all reports.

| Territory | Reply-To Address |
| Accounts Receivable | - |

SMTP – This is the internet provider's SMTP information.

Username – Usually their email address.

Password – Usually their email password. If the provider does not require secured SMTP this may be left blank.

Encryption – Many providers require encryption to be on.

Encryption Ports – 25, 465 and 587 are common.

Display Name – The name of the sender.

- Email Address The senders email address.
- BCC Address The address the sender wants copies of the email sent to.

Reply-To Address - When the recipient replies, who will get the message?

It can sometimes be tricky to get the correct info from the internet provider so this is why we always test with a known address to prove all the necessary firewall settings are correct.

Employees

In the Employees section, you will assign permissions this user will be able to view, modify or export.

Access Sales Orders – Sales orders gets added to the users menu

- Add/Modify/Delete/Export Sales orders
- Edit Tax Flags Can edit the taxes charged by overriding the defaults on the sales order.
- Modify Prices Can edit the default sell price.

Allow Returns – Can return items by entering a negative quantity.

Create Quotes

Create Standing Orders

Edit Description – Can edit the default inventory description for a sales order line.

Order Invoice Date mode – Set the users date mode by choosing from:

- Always Current Date
- Current Date Unless Invoice Date is Filled
- · Ask for the Date Unless Invoice Date is Filled

Line Discount – User can add/edit the line discount percentage.

Create Deposit / Layaway – Can add a deposit to a sales order.

View sales order/History notes – See the notes/communications on a sales order and the invoice.

Edit Sales order/History notes – Edit the notes/communications on a sales order and the invoice.

Export Sales order/History notes – Export the notes/communications on a sales order and the invoice.

Edit Salesperson – If set, the user can change the salesperson code on an order that was previously saved, and edit the default sales person code that came from the customer.

Edit Territory – If set, the user can change the territory code on an order that was previously saved, and edit the default territory code that came from the customer.

Only Modify Shipping Fields – If set the user can only edit the following on a sales order:

- Ship Via
- FOB
- Carrier
- Ship Date
- Tracking number
- Ship to
- Ship quantity

Show Back Order Warning – If checked, the user will be warned that the item was back ordered. If not checked the item is silently back ordered.

Process Orders – User can process orders therefore print the picking slip.

Ship Orders – User can ship an order and print the packing slip.

Override orders over credit limit – If the customer is over their credit limit, the user will be able to override the order and/or edit the customer's credit limit.

Lock processed orders – If checked, the user cannot edit a processed or shipped order.

Hold Invoicing Mode

- Allow Invoicing User can always invoice
- Hold Invoicing User can never invoice
- Hold over limit User can only invoice if the customer is under their credit limit

Reopen Closed/Processed/Shipped Orders – User can right click on an order and put it back to open status.

Edit Closed Orders/Invoices – User can edit an order even if it is processed, shipped or in the case of batch invoicing, closed.

Batch Orders – Adds the ability to create batches.

Post Batches – Adds the ability to post batches.

Change Division on an Order – User can switch divisions on a sales order before invoicing.

Modify Bill to address on a sales order – User can edit the bill to address on a sales order before invoicing.

Edit sales order item cost – User can edit line by line costs on a sales order. CAUTION – Allowing this setting overrides the cost from inventory therefore putting the GL out of balance with the inventory.

Default payment to 'On Account' – User will not be prompted for the payment method. If the customer does not have available credit or is over terms then it will prompt for the payment method unless these 2 settings in Company Settings/Sales Orders/Process-Invoicing are both disabled.

- 1. Require Credit Authorization
- 2. Disable Credit for Customers Over Terms

Default order type – The users default order type can be:

- Sales
- Quote
- Standing
- Booking
- RMA
- Work

Non-Inventory items – User can be set to:

- Not allowed
- Prompt
- Okay

Archive Quotes – If set the user can click the archive button and send the 'lost' quote to sales history with no shipped items.

Edit Profit Centre – Use is able to change the profit centre on a sales order.

Order Detail Sorting – User is able to sort the detail lines of a sales order by any of the columns. Especially useful if the packing slip is printed sorted by something like 'location' A column is added to the beginning to allow the user to resort back to 'natural' order. **Allow Fill Back Orders** – The 'Fill Backorder' button inside the order and on the order list will become available to the user.

Allow Update Prices – Can store the edited prices to the customer 'Price Matrix' from inside the sales order or from the sales order list.

Select warehouse when editing item inventory – Adds the warehouse selector to the sales order detail line.

Allow Increment Phase – User will be able to click the 'Next Phase' button inside a sales order or on the sales order list.

Allow Change Phase – User can edit the phase that the order is currently in.

Modify Hold – Can change the hold status of a sales order.

Add/Edit/Delete Ship Via – Can add/edit ship via's that can be then used on sales and purchase orders

Default Phase – When a user creates a sales order this phase is added automatically.

View Production Notes – Can see the production notes.

Edit Production Notes – Can edit production notes.

Export Production Notes – Can export production notes.

Change Component Cost – Can edit the component cost.

CAUTION – allowing this setting overrides the cost from inventory therefore putting the GL out of balance with the inventory.

Update Templates – User can update the templates from inside a template or by pushing from a production order.

Create Production Orders – Can create production orders.

Access Production Orders – Can access production and it gets added to the user's main menu

Edit Production Orders – Can edit production orders.

Delete Production Orders – Can delete production orders.

Export Production Orders – Can export production orders.

Build Production Orders – Can build production orders which add the produced item to inventory and relieves raw material.

Allow Increment Phases – Can increment to the next phase by clicking the button in the production order or on the production order list.

Allow Phase Change – Can edit the phase.

Create Template Orders – Allow to create templates.

Default Phase – What phase a production order is set to when adding a new order.

Automatically Commit – When setting a production order to 'Pending' or 'In Progress' it commits the complete order instead of the user committing line by line.

Requisitions

| | Ŧ | < > | |

Access Requisitions – User gets access to requisitions and it gets added to their main menu.

Add Requisitions – Can add requisitions.

Edit Requisitions – Can edit requisitions.

Delete Requisitions – Can delete requisitions.

Process Requisitions – Can process requisitions to create purchase orders.

Opening Balances

When starting new with Spire and the company is not using a migration from another product, the GL and sub ledgers require opening balances. Each of the sub ledgers need to balance to the General Ledger.

For instance if the Inventory that is entered or imported has a value of \$1,000,000 then the Inventory GL account(s) need to total to \$1,000,000.

See each of the sections below for instruction on entering opening balances.

It is important to turn off the GL before posting any opening balances because in the case of the GL you will not be able to post to control accounts, and in the case of sub ledgers the posting will include a journal entry and will be added to the already posted GL opening balance.

| J C | ompany Settings | | | | | | | | | _ | | \times |

General Ledger

The easiest way to enter the general ledger opening balance is to enter it as one large journal entry. The memo can be entered as something like "Starting Open Balance". To accomplish this the user must first turn off the GL, otherwise they will not be able to post to the control accounts.

The date to use for the GL opening balance is the closing date of the the old accounting system.

The other way to post the opening balance is to import it as journal entry which in the end has the same result as entering it manually.

Decide which method to use by figuring out if creating a spreadsheet with the correct layout will be less work than manually entering them. The spreadsheet layout is critical and the import will fail if not correct.

Once the opening balance is posted then do not forget to turn on the GL otherwise sub ledger postings will not be posted to the GL.

Accounts Payable

The usual method for entering accounts payable opening balance is to simply enter one transaction for each outstanding invoice.

The other way to post the opening balance is to import it as an AP transaction which in the end has the same result as entering it manually.

Decide which method to use by figuring out if creating a spreadsheet with the correct layout will be less work than manually entering them. The spreadsheet layout is critical and the import will fail if it is not correct.

This should include at least the following:

- Invoice Number
- Date
- Amount

This is the minimum required to make sure that the data is aged properly. The date cannot be before that first fiscal period available for posting. Usually when starting that date is at least one year prior. If the date of the invoice is older than that just use the earliest date possible so that the aging will be at the maximum value set in company settings/Accounts payable/aging periods

Optionally you should also include:

- PO number
- Terms
- Due Date
- Memo

Optionally, and if available, historical transactions can also be imported but again the spreadsheet layout is critical and most users opt to look in their old accounting system for historical data.

Important – The GL MUST be turned off when posting, otherwise it will post a journal entry and add to the GL opening balance that was already posted.

Accounts Receivable

The usual method for entering accounts receivable opening balance is to simply enter one transaction for each outstanding invoice.

The other way to post the opening balance is to import it as an AR transaction which in the end has the same result as entering it manually.

Decide which method to use by figuring out if creating a spreadsheet with the correct layout will be less work than manually entering them. The spreadsheet layout is critical and the import will fail if it is not correct.

This should include at least the following:

- Invoice Number
- Date
- Amount

This is the minimum required to make sure that the data is aged properly. The date cannot be before that first fiscal period available for posting. Usually when starting that date is at least one year prior. If the date of the invoice is older than that just use the earliest date possible so that the aging will be at the maximum value set in company settings/Accounts payable/aging periods

Optionally it should also include:

- PO number
- Terms
- Memo

Optionally, and if available, historical transactions can also be imported but again the spreadsheet layout is critical and most users opt to look in their old accounting system for historical data.

Important – The GL MUST be turned off when posting, otherwise it will post a journal entry and add to the GL opening balance that was already posted.

Inventory

For inventory opening balances they can be imported as part of the initial import or on the day the company goes live. However this is not a desireable method because there is no way to see what the opening balance was at the start.

The best way to get the opening balance for inventory is to start by importing the inventory from a spreadsheet without the balances and then on the go live date, and before posting anything that involves inventory, import the count as an "Inventory Adjustment"

Include the following in the spreadsheet:

- Warehouse
- Part number
- Count
- Memo

The memo should reference something like "Opening Balance"

Once imported it can be reviewed and then posted.

Important – The GL MUST be turned off when posting the adjustment, otherwise it will post a journal entry and add to the GL opening balance that was already posted.

Payroll

When creating opening balances for employees the items that should be set before posting a payroll in Spire is the vacation owed, (which should total in the GL to the liability account set for accrued vacation) and the advances owing (which should total in the GL to the asset account set for accrued advances).

If the company is going live in any month except January first then they must also post a timecard to each employee for the total year to date from their old system. Before posting be sure to edit the taxes, deductions and benefits to match what was historically posted.

Optionally each timecard can be posted separately.

Filters/Searches/Exports

Users can create and save filters and then combine searches with them, and then export them To Excel which will include the selected layout along with the headers and sort order.

Video instruction – Filters & Searches

| -10 | | | | | | - | | |
|------|------|-----|------|--------|----|------|---|-----|
| E | | - | | 100 | ×. | | | |

| | | 5. | | | | | | |
| 2. | | 1 | | - 22 | - | | - | |
| 2 | | Į. | | 2 | £ | 222 | - | |

Filters

Filters can be saved and include the actual filter, the columns selected, the column position and the sort order.

Useful Filter Examples

- Inventory requires ordering Filter = 'Suggested Qty" is not equal to 0
- Inventory not sold in 2 years _Filter = _"This Years Units" is 0 + "Last Years Units" is 0. Then set the "Match if" to All
- AR over 120 days Filter = "Over 120" is not 0
- Sales Order with margin less than X Filter = "GP %(Average) is less than X
- Purchase orders received in full _Filter _ "Remaining Amount" is 0

Filter Save Options.

Add Filter – Adds another filter selection.

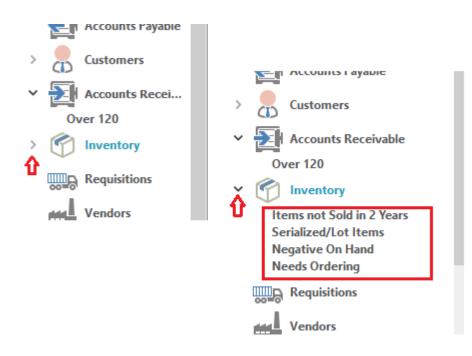

Save Default – Once a filter an/or column layout is selected the user can click 'Save Default' and then every time they enter this module this is the layout that will be presented. It does not have to be given a name so therefore does not have to be selected.

Remove Default – Removes a default that was previously set.

Save Preset – Save a filter and/or column layout. User will be asked to give it a name and if they want it to be just for the user or for everyone in the company.

NOTE: The user must have permission to create company filters in Edit/Users/General.

Add Filter To Module List – Select this to add the filter to the main menu on the left. Once added it will be indented under the module icon. The list can be accessed by clicking the arrow to the left of the icon.

Remove Filter From Module List – Removes the preset filter from the list.

Delete Preset – Deletes the preset filter.

Filter List – Shows the list of saved filters.

Searches

Each module of Spire includes a search box at the top of the list. Word(s) can be entered and the list will be filtered to the records that include the word(s) searched for. For the first word entered it will include partial words, but if another word is entered then both words to have to be complete. For instance if "hos" is entered then all records with "hos" will show. However if a "black hose" is required then "hos black" will not work. The user must enter "hose black" to achieve the desired search result.

The search feature looks into most of the fields in the database records including any communications or notes entered.

The user can also put an 'or' between words and then results with either words will show in the search results. Another option to use in searching is a minus symbol (-) which produces an exclusion for the search. As an example, if in the inventory list the user types *bar -caramel* then all items with bar in the record will show up with the exception of the ones with caramel in them.

Searches can then be exported to Excel or .csv.

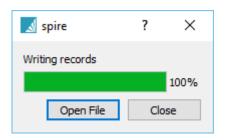

Exports

This feature gives the user the ability to combine filters and searches along with column layouts and export them. This means that Spire users can create a custom reporting system that each user can design themselves.

Once the list has been filtered as required, click on the "Export" button and then choose Excel or .csv.

Locations & Profit Centers

The location and profit center feature allows a company to use a GL segment to redirect a posting so that when a user logs in it automatically posts to the correct location or profit center.

Location

The location is selected as the user logs into Spire and everything will then be posted to that location. The user can change locations once in Spire by clicking the F10 key, as long as they have access to the other locations.

| 🗾 Change Location | ? | × |
|------------------------------------|---|----------|
| Warehouse | | |
| VA Q Inspire Health Systems | | |
| Current Division | | |
| 000 Q Consolidated Company | | |
| Location | | |
| TOR - Toronto | | - |
| TOR - Toronto | | |
| VAN - Vancouver MON - Montreal | < | <u>ه</u> |

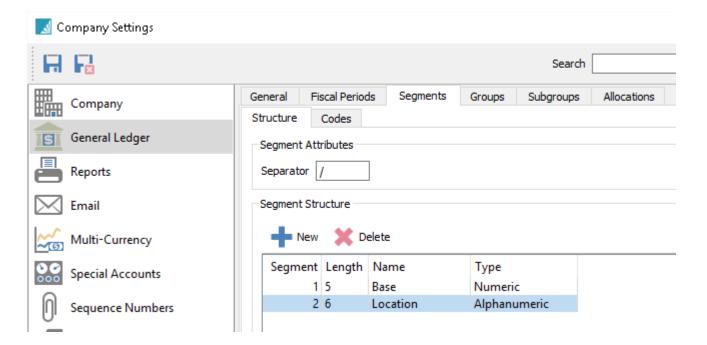

Profit Center

The profit center is selected on each sales order. If it is not changed before posting an invoice the GL will post as default. If it is changed then the GL accounts that are set for that location will be used instead.

Setup

General Ledger – Create or designate one of the GL segments for locations or profit centers and name the segment with either one, The examples below show it set as a location.

Once the segment is created and saved, go to the accounts tab and add names for the locations or profit centers as below.

| 🗾 Company Settings | | | | | | | | | | | _ | |
|--------------------|-------|---------|---------------|----------|--------|-----------|-------------|----------|-----|-----|------------------|---|
| R R | | | | | | | | Search | | | | |
| Company | ^ Ger | neral F | iscal Periods | Segments | Groups | Subgroups | Allocations | | | | | |
| | Str | ructure | Codes | | | | | | | | | |
| General Ledger | | \$ ¥ | Filters 🔻 Sea | arch | | | | 🛕 Export | + 0 | / × | Location 🔻 | |
| Reports | Cod | de | Descrip | tion | | | | | | | Base Location | 1 |
| Email | MO | N | Montre | al | | | | | | | | • |
| Email | TOF | | Toronto |) | | | | | | | | |
| Multi-Currency | 1AV | N | Vancou | ver | | | | | | | | |
| Special Accounts | | | | | | | | | | | | |

Then go into company settings/General and on the location segment select 'Location' (or whatever it was named) and save.

| J C | ompany Settings | | | | | | | | _ | | \times |
|-----------------|------------------|----------------------|----------------|-----------------|--------------|------------------|--|---------------------------|------------|-----------|----------|
| H | | | | | | | Search | | | | ? |
| | Company | General | Fiscal Periods | Segments | Groups | Subgroups | Allocations | | | | |
| | General Ledger | Special me | | ed to one or mo | ore segment | s in Spire. Thes | se settings will effe | ct which accounts transac | ctions are | posted to | |
| | Reports | The loca accounts | | ally denotes a | branch of th | e company whi | ch maintains separa | ate balance sheet and inc | ome state | ement | |
| \bowtie | Email | Location | Segment | | | | Disabled Disabled | | | | • |
| ~ <u>(</u> (5) | Multi-Currency | Profit Ce | | danataa a fi m | tion of the | | Base Location ich separate incom | | | | |
| 8 000 | Special Accounts | | nter Segment | uenotes a func | | | Disabled | e statement accounts are | e maintain | eu. | • |
| 0 | Sequence Numbers | Contract | Cost | | | | | | | | |
| | | Differen | tial GLAccount | 1000/ | | | | | | | 0 |

If the segment created was for a profit center select it there instead. In that case the segment is probably called 'Profit Center'

Then add a GL account for each location or profit center.

Locations

For locations each user can be set to be restricted to a specific location. Go to Edit/Users/General.

| 🗾 User Settings for SPIRE | | | |
|---------------------------|---|------------------------------------|-----------------------------------|
| 🔚 🙀 Search | | K < | > > |
| To User Info | ^ | Setting | State |
| | | Create/Modify Company Filters | |
| Currency | | Allow Change Warehouse | \checkmark |
| | | Allow Change Division | |
| General | | POS User Only | |
| | | Default Warehouse | VA - Inspire Health Systems |
| Reports | | Default Division | Consolidated Company |
| | | Access Communications | |
| Email Email | | Edit Communications | |
| | | Restrict Location to | No Restriction 🔹 |
| ISI General Ledger | | Edit Company Settings | No Restriction VAN - Vancouver |
| \sim | | Edit User Settings | TOR - Toronto |
| Territory | | Can Lock Window Settings | MON - Montreal |
| 6 | | Can Clear Window Settings | |
| E Accounts Payable | | Confirm Application Exit | |
| | | Export Currencies | |
| 🔚 Job Costing | | Export Jobs | |
| | | Add Sales Tax | |
| Dhase 🔿 | | Edit Sales Tax Delete Sales Tax | |
| | | Delete Sales Tax | |
| 😜 📲 Accounts Receivable | | Edit UDF Structure | |

Then when the user logs in there will be a dialog for which location to use. If they are restricted then they will only be able to log into the one they are assigned to.

| 🖩 Select Company | | | | ? × |
|---------------------|---|---|---|---|
| Company Name | ¢ | ÷ | × | Username SPIRE |
| ARomeyn | | | | Password |
| | | | | Date 05/02/2016 Q Location VAN - Vancouver TOR - Toronto VAN - Vancouver MON - Montreal |
| Licensed To: Alcomp | | | | Login Exit |

Add a GL account using the location segment for each account the company wants to re-direct. At minimum the company usually sets a sales account for each location, but can also add coast of goods, inventory and taxes.

Video Instruction – Location Accounting

Profit Centers

This feature allows the user to select on each order where the posting will be redirected based on predefined 'Profit Centers'

Inside a sales order the user selects the profit center to post to.

Reporting

Spire uses Crystal Reports for all of its reports. Spire partners can assist with developing reports for you or if you have the knowledge you can write them on your own. The reports are created or edited with Crystal Reports versions 10, XI or 2013. Crystal Reports can be obtained online from <u>SAP with this link</u>. If you have a previous version of Crystal Reports then you may qualify for an upgrade price.

| Document Pro | operties | Х |

| Application: | SAP Crystal Reports | |
| <u>A</u> uthor: | reportdev@spiresystems.com | |
| Keywords: | | |
| <u>C</u> omments: | Inventory list of Committed, On Hand, Costs and value by part number, product code warehouse and total. | |
| <u>T</u> itle: | Inventory Status | |
| Subject: | | |
| Template: | Inventory List | |
| Sa <u>v</u> e Pre | eview Picture | |
| | OK Cancel <u>H</u> elp | |

In Crystal Reports, select File/Summary Info and this screen will show,

Author – The person that developed this report.

Keywords - Not used.

Comments – A brief description of what this report does. This is shown to the user when they print it in Spire.

Title – This is the title that the user sees when they print the report in Spire.

Subject – Not Used

Template – The template name is how Spire knows where the report should be presented to the user. <u>See</u> <u>'Report Templates' for more detail.</u>

| Inventory Count Sheet.rpt | List of Inventory items to count.Kits, Non Physical and InActive items are excluded. Print Selected and Print All are supported | Inventory Count Sheet | Inventory List |
| Inventory Label 2×1.rpt | Inventory Label prints part number, description and Retail Price 1. Setup on a Zebra GX420d printer, 5 cm X 2.5 cm ($2^{\circ} \times 1^{\circ}$) label. Change the printer inside the report if a lable printer driver named different than ZDesigner GX420d is used. | Inventory Label 2×1 | Inventory Label |
| Inventory Label 5160.rpt | Inventory Label for Avery 5160 Laser Label sheet or equivalent. | Inventory Label 5160 | Inventory Label |
| Inventory Re- order.rpt | Prints a lsit of selected items that meet the suggested order quantity criteria. | Inventory Re-order | Inventory List |
| Inventory Statistics.rpt | Sales Statistics for selected part number. | Inventory Statistics | Inventory List |
| Inventory Status.rpt | Inventory list of Committed, On Hand, Costs and value by part number, product code warehouse and total. | Inventory Status | Inventory List |
| Item Allocations.rpt | Show where the selected item exists on Sales Orders, Purchase Orders, Inventory Adjustments/Transfers, and Production Orders, as applicable, with quanties. | Item Allocations | Inventory List;Inventory |
| Item Components.rpt | Components List for selected Inventory Item. | Item Components | Inventory Components |
| Pending Inventory Adjustments.rpt | Print list of Inventory adjustments or transfers not yet posted. | Pending Inventory Adjustments | Inventory Adjustment;Inventory Adjustment List |
| Post Inventory Adjustments.rpt | Print list of items received, adjusted or transferred. | Post Inventory Adjustments | Inventory Adjustment Apply;Purchase History |

Point of Sale Reports

| Crystal Report Name | Description | Report Title | Module |
|------------------------|--|-----------------|----------------|
| POS Receipt.rpt | POS Receipt for batched invoices showing description, quantity and amount. | POS Receipt | POS Receipt |
| Sales Cashout.rpt | Balance cash drawer and Point of Sale terminal to payments recorded. | Cash Out | Cash Out |

Price Matrix Reports

| Crystal Report Name | Description | Report Title | Module |
|------------------------------|---|------------------------|--------------------------|
| Customer Price List.rpt | Show prices applicable for the selected customer. | Customer Price List | Customer Price Matrix |
| Customer Price matrix.rpt | Show prices applicable for the selected customer. | Customer Price List | Customer Price Matrix |

Process Reports

| Crystal Report Name | Description | Report Title | Module |
|--------------------------------|---|----------------------------|-------------------------|
| Packing Slip.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Packing Slip | Process |
| Process Slip.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Process- Pick Slip | Process |
| Requisition List.rpt | Print selected requisition records. | Requisition List | Material Requisition |
| Ship Slip.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Ship Pack- Slip | Ship Order |
| Trial Post Transactions.rpt | List of GL transactions that will be created by this batch is posted. | Trial Post Transactions | Trial Transaction |

Production Reports

| Crystal Report Name | Description | Report Title | Module |
|---|---|---|--|
| Materials Requirements by Inventory.rpt | Materials required for listed Production Orders, ordered by part number. Use Reqd. Date filter to list deisred Production Orders. | Materials Requirements by Inventory | Production Order List |
| Production Build.rpt | Production Order details and instructions for the selected Production Build | Production Build | Production Build;Production History;Production History List |
| Production Order.rpt | Production Order details and instructions for the selected Production Order. | Production Order | Production Order;Production Order List |
| Production Schedule.rpt | A list of all Production Orders in required date order. | Production Schedule | Production Order List |
| Production Template.rpt | Production Order details and instructions for the selected Production Order. | Production Template | Production Template;Production Template List |
| Production Trial Build.rpt | Report to check if all components are available to build the selected Production Order. | Production Trial Build | Production Order |

Purchase Order Reports

| Crystal Report Name | Description | Report Title | Module |
|--|--|--|--|
| Accrued Payables Summary.rpt | List of selected Purchase Orders, showing accrued and invoiced amount. | Accrued Payables Summary | Purchase Order List |
| Pending Purchase Order Receipts.rpt | Purchase Orders that have had received quantities recorded and Saved. | Pending Purchase Order Receipts | Purchase Order;Purchase Order List |
| Post Inventory Receipts.rpt | Print list of items received on this Purchase Order | Post Inventory Receipts | Purchase Order Apply |
| Purchase Order Details.rpt | List of selected Purchase Orders, Details format. | Purchase Order Details | Purchase Order List |
| Purchase Order Reprint.rpt | Purchase Order Reprint from Purchase History. | Purchase Order Reprint | Purchase Order Reprint;Purchase History |
| Purchase Order Summary.rpt | List of selected Purchase Orders, summary format. | Purchase Order Summary | Purchase Order List |
| Purchase Order.rpt | Purchase Order prints when issued. Can be reprinted from Edit Purchase Order and Purchase Order List but will specify if the Purchase Order has not been issued. | Purchase Order | Purchase Order;Purchase Order List;Purchase Order Issue |
| Receipts Order Fulfillment.rpt | Show Backorders and Production Orders that can be filled with the product just being received. Requisitions are respected first. | Receipts Order Fulfillment | Purchase Order Apply |

Sales History Reports

| Crystal Report Name | Description | Report Title | Module |
|---|--|--|---|
| Customer Sales History Details.rpt | Sales history by territory, salesperson, and customer by invoice. | Customer Sales History Details | Sales History Items |
| <u>Customer</u> <u>Sales</u> <u>History.rpt</u> | Sales history by territory, salesperson, and customer. | Customer Sales History | Sales History |
| Daily Fill Rate by Invoice.rpt | Reports on percentage of product shipped that was ordered for the selected Invoices. Date range and Invoice number filters are reported. Sales Order lines with backorders are exposed. | Daily Fill Rate by Invoice | Sales History |
| Daily fill Rate by Item.rpt | Reports on percentage of product shipped that was ordered for the selected Invoices. Date range and Invoice number filters are reported. Sales Order lines with backorders are exposed. | Daily Fill Rate by Items | Sales History Items |
| Inventory Sales History Details.rpt | Sales History by warehouse, product code and part number per invoice. | Inventory Sales History Details | Sales History Items |
| Inventory Sales History.rpt | Sales History by warehouse, product code and part number | Inventory Sales History | Sales History |
| Invoice Posted.rpt | This is the form that is used for the Invoice that is Live Posted and to Reprint a History Invoice. | Invoice | Invoice Posted;Invoice Reprint;Sales History;Customer Sales History;Accounts Receivable |
| Sales and Taxes.rpt | List of Invoices and Taxes for selected Invoices. All filters are respected. | Sales and Taxes | Sales History |
| Sales by Payment Method.rpt | Sales grouped by payment method for selected records in sales history | Sales by Payment Method | Sales History |

Sales Orders Reports

| Crystal Report Name | Description | Report Title | Module |
|---|--|-------------------------------------|--|
| Backorder Details by Customer.rpt | Backorder Details by customer. Products on backorder for each customer showing what is ready for order filling. Print Selected and Print All respected. | Backorder Details by Customer | Sales order List |
| Equipment Service History.rpt | Show all open work orders selected and the previous invoices related to applicable equipment. | Equipment Service History | Sales order |
| <u>Invoice</u> <u>Batched.rpt</u> | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Invoice | Invoice Batched;Sales Order;Invoice Batch |
| <u>Order</u> <u>Confirmation.rpt</u> | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Order Confirmation | Sales Order;Sales Order List |
| Pick Ticket.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Pick Ticket | Sales Order;Sales Order List |
| Quote.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Quote | Sales Order;Sales Order List |
| <u>RMA Order.rpt</u> | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | RMA Order | Sales Order;Sales Order List |
| <u>Sales Order</u> Details List.rpt | Prints a list of order details with filters as being displayed on the screen. Totals shown by Shipped Qty and Ordered Qty. | Sales Order Details List | Sales Order List |
| <u>Sales Order</u> <u>List.rpt</u> | Prints a list of orders with filters as being displayed on the screen. | Sales Order List | Sales Order List |
| Sales Order.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and | Sales Order | Sales Order;Sales |

| | Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | | Order List;Order Deposit |
|--------------------------------|--|----------------------------|--|
| Sample Address Label.rpt | Prints a label for the Sales Order(s) selected or the one being Edited. | Sample Address Label | Sales Order;Sales Order List |
| Work Order.rpt | This is the form that is used for the Packing Slip, Pick Ticket, Order Confirmation, Sales Order, Work Order, RMA and Quote depending on the title of the report. Quote and Sales Order Confirmation use the 'Ordered Quantity' to calculate Totals. | Work Order | Sales Order;Sales Order List;Order Deposit |

Vendor Reports

| Crystal Report Name | Description | Report Title | Module |
|--------------------------------------|---|-----------------------------------|---|
| <u>Vendor</u> <u>Activity.rpt</u> | List of transactions for the selected vendor(s). Grouped by Accounts Payable General Ledger account and Currency. | Vendor Transaction Activity | Vendor List;Accounts Payable;Vendor |

Custom Reports

Custom reports for Spire are saved on the server in one of 2 places. If the report is required for all companies then save it on the server in C:\Programdata\Spire\Reports

If the custom report is an edited version of one of the stock reports and it has the same file name as the stock one, it will replace the stock one. If it is given a different name then both the stock one and the custom one will appear when the user prints,

Templates & Parameters

To find out what report templates and parameters are available when printing, turn on the user setting Reports 'Enable report development tools'. Then whenever the print button is clicked this dialog will appear beside the reports list and the available report fields will be displayed.

| <u>gl_subgroups</u> | GL Subgroups available |
| <u>gl_transactions</u> | GL Transactions from last year, this year and next year |
| <u>inventory</u> | Inventory and warehouse master list |
| inventory_adjustment_items | Details of unposted inventory adjustments and warehouse transfers |
| inventory_adjustments | Header details for adjustments |
| inventory_comments | Pre-defined comments available for sales orders |
| inventory_conversion_factors | |
| inventory_kit_items | Components contained in a kit |
| inventory_kits | inventory_kits |
| inventory_levy_codes | Levy codes and their rates that can be assigned to inventory |
| inventory_part_no_changes | Un-applied part number changes containing old and new part number |
| inventory_physical_counts | |
| inventory_price_matrix | List of all available special customer prices and their methods |
| inventory_pricing | Inventory prices |
| inventory_product_codes | Product codes available for assignment to inventory |
| inventory_promo_codes | List of available promo/reason for price matrix |
| inventory_receipts | Inventory receipts from purchase orders and inventory adjustments |
| inventory_requisitions | Inventory requisitions that come from Sales Orders, Production Orders and inventory. |
| inventory_serial_numbers | List of all serial numbers and lost numbers available and sold |
| | |

| inventory_serial_transactions | Transactions of each movement of a serial number or lot number |
|-------------------------------|--|
| inventory_statistics | Period and year containing quantity sold of each item |
| inventory_uoms | Units of measure available for each inventory item |
| inventory_upc_codes | UPC codes available for inventory. |
| inventory_warehouses | Warehouses available for inventory |
| job_items | Details posted to job cost from GL, AR, AP, Sales, Purchases, Payroll and direct from job cost |
| jobs | Jobs and their details containing total income, costs and hours posted |
| note_types | List of available types of notes for communications |
| notes | Communication details |
| payment_terms | Payment terms and their details available to customers and vendors. |
| payroll_depts | Departments for payroll containing GL accounts for posting |
| payroll_schedules | Schedules available for employees |
| phase_history | Historical movements of phases in Sales, Purchases and Production containing details of starting and ending dates/times. |
| phases | List of available phases for sales, purchases and production |
| production_history | Posted production headers |
| production_history_items | Posted production details |
| production_order_items | Unposted production order details |
| production_orders | Unposted production details |
| production_template_items | Production template details |
| production_templates | Production template headers |
| purchase_history | Purchase history headers |
| purchase_history_items | Purchase history details |
| purchase_order_items | Details of purchase orders not closed |
| purchase_orders | Headers of purchase orders not closed |
| record_types | Contains the text and background colour of customer, vendor or inventory |
| sales_departments | Sales departments for Inventory containing GL accounts for Inventory asset, Cost of goods and Sales accounts |
| sales_history | Sales history headers |
| sales_history_equipment | Equipment details posted with sales |
| sales_history_items | Sales history details |
| | |

| sales_history_payments | Payments on history invoices |
|------------------------------|--|
| sales_order_archives | Sales Order headers of all deleted sales orders |
| sales_order_batches | Batch details including profit centre and location |
| sales_order_equipment | Equipment attached to un posted ales Order |
| sales_order_item_archives | Details of all deleted sales orders |
| sales_order_items | Un-posted Sales Order details |
| sales_order_payment_archives | Payments assigned to deleted Sales Orders |
| sales_order_payments | Payments assigned to open Sales Orders when sales orders set to batched mode |
| sales_orders | Sales order headers |
| sales_taxes | Sales taxes and their rates |
| salespeople | Salespeople master list |
| shipping_methods | Shipping methods available for sales and purchases |
| system_filters | User and company filters and details |
| system_record_locks | Record is added to locks when a user has a record open |
| system_report_permissions | Contains report security for company and users |
| system_sequence_numbers | Next sequence number for each document |
| system_settings | Contains the settings for the company |
| system_users | User list |
| territories | Territory master list |
| timecard_entries | Each timecard line from Payroll |
| timecards | Timecard headers |
| udf_fields | User defined fields from each module |
| udf_pages | User defined pages/tabs from each module |
| vendor_code_changes | Un-posted vendor code changes containing old and new code |
| vendor_pricing | Vendor pricing for Inventory used for purchases |
| <u>vendors</u> | Vendor master list |
| <u>zip_codes</u> | Zip/Postal codes, provinces and states |
| | |

Inspire Health Systems.

Communications- (CRM)

The communications tab appears in most modules and master records. It allows a user to enter notes that can then be assigned to either the current user or another user for followup on the specified date. While it is not a Customer Relationship Management system it can assist your team in keeping informed on your customers activities and communications.

Click the Communication icon on the main menu.

Filters – Set a filter to display only the communication that the user wants to see. The most common one is the "Assigned To" filter so they only see their own communications.

Export – Exports the list of communications to Excel or .csv based on column and position selection.

Add – Adds a communication.

Edit – Edits a communication.

Delete – Deletes a communication.

Print – Any report that has <u>'Communications' as a Crystal Reports template</u> will be presented.

Open Related – Opens the module and record for the source of the message.

Module – The module where the communication was created.

Item – The record for where the communication was created. For example the customer number, sales order number or inventory item.

Subject – The subject the user put on the communication.

Created Date – The date it was created.

Created By – The initials of the user that created the communication.

Due Date – The date the assigned communication is due for completion.

Completion Date – The date entered when it was completed. **Attention** – This can either be:

- Alert Means that this message will pop up when editing a document like a sales or purchase order when the item, customer or vendor is added.
- Print Means this will be printed on whichever form was selected.

Note- The Crystal Sub Report that contains the communication on forms is hidden by default. Speak with your Spire partner to assist with revealing it.

Display Type – The form that this communication should print on. For example on Invoices or Purchase Orders.

Assigned To – The user's initials that the communication is assigned to.

Group Type – The type of message. Each company can create their own types by doing a lookup on the type field. For example "Follow-Up"

Modified Date - Date this communication was last edited.

Modified By – The users initials that last edited this communication.

Note that there is no security that stops users from seeing each others communications. However the user can be blocked from seeing notes from certain modules.

Example communications

- Inventory Add a note if someone notices that there are not the correct quantity in stock in the warehouse. Assign to the warehouse manager to do a count.
- Customer Put an alert on the customer for their birthday so if you add a sales order for them it will
 pop the message.
- Accounts Receivable Add a message if the customer says they will have payment on a certain day. If assigned to a user they will be prompted to call on the correct day,
- Quote Add a follow-up reminder so the quote does not get forgotten.

When User Logs In

When the user logs in and there are communication notes that are due or overdue, a "To-Do" list will be presented. By clicking the edit button the user can see the details of the communication.

Export – Used to export the filtered list and column order to Excel. In the screenshot example above this list is sorted by account number and has a filter set to see all rows where 'Debit Balance' and 'Credit Balance' is not 0.00 (zero). The match if = 'Any' makes sure we are not using an 'or' selection. This can now be export to Excel and it will be a trial balance that the user can add a total using Excel's sum command.

Add – Adds a new GL account

Edit - Edits highlighted GL account

Delete – Deletes the highlighted GL account. This account cannot be deleted if it has anything posted to it.

Print – Print GL account reports such as:

- Trial Balance
- Income Statement
- Balance Sheet

The user will be presented with a screen like this that includes all Spire stock reports and any custom ones added with a <u>Crystal Report template</u> of 'General Ledger List'.

| 🕤 Report Op | otions | ? | × |
|-------------------------------|--------|----------|-------|
| Period Ending Show Details | | 5 (Curre | nt) 🔻 |
| | | 0 | К |

The user would select the period they want to print, and whether they want to add additional details.

The next screen would ask which report(s) to print, the printer selection information and if they want to email the reports. Note that all reports can be printed or emailed at once.

Save - Saves changes

Save Close – Saves changes and closes the account

Delete – Deletes a GL account. This is only allowed if there are not transactions posted to the account.

Print – Prints all reports that have a Crystal Report template of "GL Account"

Reconcile – Click this to do an account reconciliation for this GL account. Most commonly it is for bank accounts and credit card accounts but any GL account can be reconciled. See <u>Account Reconciliation</u> for more details.

Division – If Divisions are turned on in <u>Company Settings/General Ledger</u>, then each account will have a division. Each account will also then have a consolidated division of '000'. All transactions will get posted to a division plus the consolidated (000) division.

Account No – The General Ledger Account number.

Name – A descriptive name for the GL account.

Currency – The currency assigned to this account.

Inactive – If set to inactive the GL account cannot be posted to.

Group – The group that the account belongs in. Groups are setup in Company Settings/General Ledger

Subgroup – The subgroup that the account belongs in. Subgroups are setup in <u>Company Settings/General</u> <u>Ledger</u>. Subgroups allow you to consolidate GL accounts on GL reports.

Normal Balance – Select Debit if the normal balance is a debit, and Credit if the normal balance is a credit.

Type – When the group is selected the type is automatically populated from the group setup.

GIFI Account – An acronym for 'General Index of Financial Information' as setout by CRA (Canada Revenue Agency' <u>See this link</u> for more information.

Check Sequence – The next cheque number that will be assigned by default when paying from this GL account.

Sales Account – Is this account set as a sales account.

Bank Account – Is this account a bank account. By checking this the next cheque number field will be exposed and the account will become available to pay from.

Revalue – When invoking the multi-Currency revaluation process, should this GL account be included.

Refresh - Refresh transactions to see if there are new posting to this account

Filters – Set any numbers of filter to show only the rows of data required.

Search Box – Is a search to look for word(s) in all fields.

Export – Export the filtered and sorted list to Excel or .csv.

Print – Print any report with the <u>Crystal Report Template</u> of GL Transaction List.

View – View the complete journal entry.

View Source – View the source document that produced this journal entry if there is one. Possible source documents are:

- Order Entry
- · Purchase Order
- Payroll

Transaction No – The GL transaction number that was generated sequentially the next transaction number in <u>Company Settings/Sequence Numbers</u>.

- **Source** The source that this posting came from.
- Debit The amount of the debit transaction
- Credit The amount of the credit transaction.
- **Transaction Date** The the date that the transaction was posted to.

Posted Date – The the date the user was logged into Spire when they posted the transaction.

- **Memo** A memo added by the user doing a journal entry.
- **Type** The type of transaction that was posted.
- **Entity** The entity is the customer, vendor or employee code of the posting.
- **Document** The document number passed from the sub ledger posting. ie- the invoice number
- **Reconciled** The date that the entry was reconciled. If blank then it has not been reconciled.

User ID – The initials of the user that posted the transaction.

Account Balances

The GL is open for posting for 3 years. Once the year is complete, the year end process is run and the balances from this year get moved to last year. It is typical that today's date falls into this year, but if the year end process is not complete then the user will log into 'Next Year' using today's date.

View – Highlight a period and click view and the transactions for just that period will show.

Foreign Currency – Toggle to see the base and foreign currency values.

Change Next Year – The amount that this account changed for that period for next year.

Next Year – The running balance of the GL account for that period for next year.

Change This Year – The amount that this account changed for that period for this year.

This Year – The running balance of the GL account for that period for this year.

Change Last Year – The amount that this account changed for that period for last year.

Last Year – The running balance of the GL account for that period for last year.

Account History

Once last year has had its final adjusting entries completed, the year can be closed. When it is closed the balances get moved to the GL History table and the transactions to the GL History Transaction table. Once there they are only available for viewing and reporting and can no longer be posted to.

Fiscal Year End – Year end of the year that was closed to GL history.

Ending Balance – The closing balance of this account when the year was closed.

Net Change – The net change for that year.

Once you drill down into one of the years you see each period.

Period End Date – The end date for each period of the closed year.

Net Change – The net change for the historical period.

Balance – The closing balance for the historical period.

Account Notes

Any number of notes can be added for this GL account.

User Defined Fields

User defined fields can be added to track and/or print. (Spire UDF license required).

Summary

The GL Summary screen totals each group but allows the user to expand the tree structure to see individual accounts.

Transactions

In this screen you can see all transactions posted from last year, this year and next year if items were post dated or you are working in next year. Filters can be set to view less transactions and either reported on or exported. When printing any report with the <u>Crystal Report Template</u> of GL Transaction List will be listed.

The search box is very powerful in this list as the user can find any word(s). An example would be to search for a customer code and every transaction posted for that customer will show on the list. Or search for a purchase order number so that every receiving, closed and AP entry will be found.

Refresh – Refresh transactions to see if there are transactions posted.

- Filters Set any numbers of filter to show only the rows of data required.
- Search Box Enter is a search to look for word(s) in all fields.
- Export Export the filtered and sorted list to Excel or .csv.
- Print Print any report with the Crystal Report Template of GL Transaction List.
- **View** View the complete journal entry.

View Source – View the source document that produced this journal entry if there is one. Possible source documents are:

- Order Entry
- Purchase Order
- Payroll

Transaction No – The GL transaction number that was generated sequentially the next transaction number in <u>Company Settings/Sequence Numbers</u>.

- **Source** The source that this posting came from.
- Debit The amount of the debit transaction
- **Credit** The amount of the credit transaction.
- Transaction Date The date that the transaction was posted to.
- **Posted Date** The date the user was logged into Spire when they posted the transaction.
- **Memo** A memo added by the user doing a journal entry.
- **Type** The type of transaction that was posted.
- **Entity** The entity is the customer, vendor or employee code of the posting.
- **Document** The document number passed from the sub ledger posting. ie- the invoice number
- **Reconciled** The date that the entry was reconciled. If blank then it has not been reconciled.
- **User ID** The initials of the user that posted the transaction.

Recurring Entries

Recurring transactions allows past transactions to be duplicated on a schedule. Transactions available to recur are entries made directly in AP, AR or Journal Entries. The user can edit the recurring entry before posting it and then the next time the entry comes up on the schedule it will use the latest version of the posting.

Save – Save the recurring entry.

Save and Close – Save and close the recurring entry.

View Source - View the GL posting of the transaction that was selected to recur..

Start Date – When the recurring transaction should start.

End Date – When the recurring transaction should end.

Frequency – Select a repeat cycle for the transaction. The choices are:

- Monthly
- Specific Date
- Bi-Monthly
- Fiscal
- Annual
- Weekly
- Bi-Weekly
- Daily
- Quarterly

Start of Month – If the cycle selected is 'Monthly', select this if it should have at the start of the month.

End of Month – If the cycle selected is 'Monthly', select this if it should have at the end of the month.

Day of Month – If the cycle selected is 'Specific Date' then choose the day of the month.

Second Day of Month – If the cycle selected is 'Bi-Monthly' then select the second day along with the 'Day of Month' above for the first day.

Start of Period – If the cycle selected is'Fiscal' then select the period.

Day of Year – If the cycle selected is Annual then select the day of the year.

Day of Week – If the cycle selected is 'Weekly' then select the day of the week.

Status – Status can be 'Active' or 'Suspended'

Created By – The initials of the user that created the recurring record.

Last Occurrence – The last date the entry was posted.

Reference – A reference can be added.

Vendor/Customer – The vendor or customer that the entry will be posted to.

Recurring Alerts

If the user has the setting <u>General Ledger/Alert Recurring Entries</u> when the user logs in they will be presented with the list of recurring entries that are due or overdue to be posted. They can simply click on post, view or edit.

Note-The user can edit the recurring entry before posting it and then the next time the entry comes up on the schedule it will use the latest version of the posting.

Account Reconciliation

Each general ledger account can reconciled against a statement. The most common use is for banks and credit cards, but any account can be reconciled.

To access the account reconciliation, go to GL/Accounts and open the account to be reconciled and click on 'Reconcile.If divisions are turned on the reconciliation should be done on the '000' (consolidated) division. This is because if postings are done to multiple divisions then not all transactions will show up except in the consolidated division.

| a GL Account - [000] 11120 | – 🗆 🗙 |
|--|----------------------|
| 🗟 🗶 📇 🗸 Reconcile | ? |

Save – Save your work in progress.

Save & Close – Save and close the GL account.

Refresh – Refresh transactions posted elsewhere. The user can minimize the reconciliation screen to complete a transaction that effect this account and then come back and refresh.

Print – All Reports with a template of 'Account Reconciliation' will be presented.

Post – Post the reconciliation . The user will be asked to print the report first.

Import – Import a .qfx file from the bank that contains transactions that were posted to the account. Any transactions that match dates and amounts will automatically get the reconcile flag added.

Show Reconciled – Shows all transactions that were previously reconciled for this account. The user can uncheck one that was checked incorrectly in a past reconciliation. This should only be done when nothing else is checked because when the post button is clicked it will un-reconcile the ones that were previously reconciled and reconcile the ones checked now.

Create Journal Entry – Starts a journal entry that has the account being reconciled as the first line.

View Journal Entry – View the journal entry of the highlighted line.

View Account – Opens the GL account for viewing.

Note – If doing back to back reconciliations be sure to use the date of the bank statement end as it will use that date for the reconciliation post. If left blank then it will post today's date. If more than one reconciliation is done with the same date it becomes harder to unreconcile if required

Opening Balance – The statement opening balance that gets carried forward from the previous reconciliation.

| Closing Balance - | The closing | balance of the | statement. |

Reversing a Reconciliation

Sometimes an error is made after the account reconciliation has been posted, and the user would like to reverse and re-do it.

First of all make sure there are no check marks in the reconciliation screen and then click "Show Reconciled"

- Sort the list by the reconciled date and un-check all the ones for the date that needs to be un-posted. (Note- the check to use is the left hand column and not the one next to the reconciled date)
- Once selected click on 'Post' and you will be prompted for a report which can be cancelled,
- Click OK to post and the reconciliation for that date will be reversed.
- Note If doing back to back reconciliations be sure to use the date of the bank statement end as it will use that date for the reconciliation post. If left blank then it will post today's date. If more than one reconciliation is done with the same date it becomes harder to unreconcile if required.

GL – Included Reports

GL Included Reports

Multi-Currency

Code – The short name for a currency.
Country – The country using this currency,
Currency – The name of the currency.
Fixed Rate – The fixed rate for the currency.
Buy Rate – The rate this currency is bought at.
Sell Rate – The rate this currency is sold at.
Indirect Rate – Checked if set to indirect.
Symbol – The symbol used for this currency.

The multi-currency module allows a company to operate in other currencies besides the base used for GL reporting.

Invoices can therefore be sent to customers and payments can be accepted in their own currency and when they get posted to the GL they get converted to the companies base currency.

Purchase orders can be sent to vendors in their currency and when the inventory arrives it gets converted to base currency, Then when payment is made to the vendor it will pay them in their currency.

When invoices are posted to accounts receivable and purchase orders are closed to accounts payable the currency rate of the day is used. Then when the payments are received and made and the rate is different, Spire will automatically post the difference to the Gain/Loss GL account set for that currency.

Setting Currency Rates

Click add or edit to setup a currency.

Code – The international short code for a currency. **Country** – The country that uses this currency,

Description – The name of the currency.

Value

Rate – Select direct or indirect.

Fixed – The rate that will be used if the monthly rate is at zero.

Method – Select fixed or Buy/Sell

- *Buy* The rate the currency is purchased.
- Sell The rate the currency is sold.

If the method chosen is 'Fixed' then the sales and purchases will use the same rate. The bank charges a different rate to purchase a currency that they pay for deposits so a buy and sell rate can be entered so that Spire will separate the rates.

Format

Unit Name – The unit name that the currency is traded in such are dollars.

Fraction Name – The fraction of units name such as cents.

Sign – The sign or symbol for the name such as \$.

Sign is – Sign is a prefix or a suffix.

Thousands Separator – The separator for thousands of the currency such as 1,345,366

Decimal Places – How many decimals is usually used.

Decimal Mark – What mark is used for the decimals for instance a point or comma.

Cheque Date Format – The date format for the date when paying with this currency.

Gains/Losses

GL Account – The GL account to post gains and losses for this currency.

Conversion Defaults

Convert Selling Prices from Base Currency – If this is checked then the sell price will use the customers currency as a conversion. If not checked then it will sell at the same amount in foreign as it is set in base.

Inventory price levels can be linked to a currency. Highlight the currency in Edit/Currencies and click the "Default Selling Price Level" button. When a price is set for that level, it will charge in the currency selected.

Unit Price Rounding – Usually set to the nearest 10th or 2 decimals.

Currency Revaluation

Used to revalue GL accounts because of current rate changes.

The user must have the setting Users/Currency/Revalue Currency to be able to run this function.

The revaluation process can be run for 'Today's' date or the user can select a past month(s) to run it retroactively. If there is a rate set for that month it will be used as a direct in the revaluation. If there is no rate set then it will use the main rate.See below.

| 10/31/2014 | 1.23 | 10/31/2015 | 1.29 | 09/30/2016 | 0.00 |
| | | 11/30/2015 | 1.27 | 10/31/2016 | 0.00 |
| 11/30/2014 | | | 4.00 | 11 (20 (2016 | 0.00 |
| 11/30/2014 12/31/2014 | 1.24 | 12/31/2015 | 1.30 | 11/30/2016 | 0.00 |

Before running the revaluation process be sure to set the rate for each currency.

The revaluation will only be run on the GL accounts that have the 'Revalue' flag set on them.

| Division No 000 Q Account No | 11120 Name Cash in Bank-USI | > | Currency USD | Q Inactive |
|---|-----------------------------|----------------------|--------------|------------------------|
| Details Transactions Balances | History Notes User Defin | ned | | |
| <u>G</u> roup 100 Q | Cash | Туре | Asset | Sales Account |
| Subgroup Q | | GIFI <u>A</u> ccount | 1002 | ☑ <u>B</u> ank Account |
| Normal balance O <u>e</u> bit <u>C</u> redit | | Chegue sequence | 0 | Track job cost |
| | | | | 🗹 Revalue |
| | | | | |

To run the revaluation go into the GL accounts view and highlight one of the GL accounts for the currency that needs to be revalued and click on 'Revalue'. Choose 'Selected' and the revaluation will be run for all accounts with that currency.

If the user want to revalue all currencies at once then choose "All" instead of "Selected"

The user will be asked to select a date to revalue. Whatever date is selected the revaluation process will be done for that 'Month End' backwards and posted to the the date selected.

The value in the base column for a foreign GL account is based on the exchange rate of each of the transactions that were posted to it. If the currency rate has changed, the revaluation function changes the balance of the account, for the month it is run to match the new rate. The difference gets posted to the GL account that was set for gain/loss for each currency. The foreign balance of the account does not change when reevaluating the account.

If an error is made and the user wants to reverse the revaluation transaction, locate the journal entry and click 'Reverse'

Modules using Multi-Currency

Multi-Currency is used in various places in Spire.

General Ledger – Journal entries can be made posting to foreign and base accounts.

NOTE: The base and foreign amounts as well as the rate are editable prior to posting.

| 🛯 GL Transacti | on - 0000000673 | | | | - | - 🗆 | × |

| | | | | s 1,200.00 ts 1,200.00 | Balance | 0.00 | |

Accounts Payable – All items are entered in the foreign value and are posted using the rate at the time. If the rate changes when the item is paid, the difference is posted to the gain/loss GL account set for the currency,

Purchase Orders – When a purchase order is created the prices are all in the foreign currency. When the PO is received the amounts are posted to accounts payable in the foreign amount. The amounts of the accrued freight and duty are in base. The inventory received gets landed in base an includes the accrued freight and duty.

The vendor's currency is shown on the bottom of the PO. Once items are added to a PO the vendor cannot be changed to a one with a different currency.

Accounts Receivable – All items are entered in the foreign value and are posted using the rate at the time. If the rate changes when the item is paid, the difference is posted to the gain/loss GL account set for the currency,

Sales Order/Invoicing – When creating a sales order for a customer that is set with a foreign currency the prices are either converted using the currency rate unless the customer is set to a sell level that has a currency assigned to it. The exception of this is if there is a 'Price Matrix' record for this customer. It will then use that price in their currency.

The customer's currency is shown on the bottom of the sales order. Once items are added to an order the customer cannot be changed to a one with a different currency.

Point of Sale – Acts the same way as sales orders.

Customers

Creating or Editing a Customer

Select 'Customer' from the main menu and then click the + (plus) button.

This will bring you to the customers main address screen. If creating a new customer the minimum data entry required is the customer code and a customer name.

Make sure that all data entry is done in a standardized format to insure accuracy in searching for records later. For instance many will use the first 3 characters of the first word in a companies name and the first 3 letters of the companies second name. Therefore Acme Tools will become ACMTOO.

Customer Header

Save – Saves a customer and leaves the customer window open

Save/Close – Saves a customer and closes the customer window

Delete – Deletes a customer.

• NOTE: A customer with history cannot be deleted.

Update Orders – This button will search for open sales orders and update any address changes including email addreses.

Navigation buttons – Allows the user to navigate the customer list. The navigation order will respect the filters and sort that was set before editing the customer.

Customer Addresses

Code – Must be unique

Name – The customer name that will appear on reports/forms

On Hold – If this check box is selected then no transactions can be entered for this customer.

Status – The customer can be set to one of 3 statuses, Active, Inactive or Prospect. A customer can only be made inactive if they have no balance in accounts receivable. A prospect setting is normally used when we are still trying to earn a company's' business. All of these statues can be used to create filters so that you can view only the ones that you want.

• **NOTE:** A user needs to have the security setting of "Customers/Show Inactive Customers" on to see be able to see inactive customers.

Colours – Each customer can be colour coded with a background and test colour for whatever reason. For example a company may want their foreign customers to stand out on their customer list and therefore colour code them in blue.

Addresses – Click on the + button to add any number of ship-to addresses. You can also delete ship-to's by clicking the X icon. The button between the 2 gives allows you the ability to append the currently highlighted address to a new ship-to. By default only the billing address is put onto a sales order, however you can change this by selecting one of the ship-to addresses to be 'default'. Then every sales order will default to having the billing address and this ship-to address.

Map – This button opens the address in either Google Maps. OpenStreetMap or Bling.

Contacts – These 3 contact labels can be edited to suit your requirements in Company Settings/Customer.

Hold Address - This puts a ship-to on hold so orders cannot be created for it

Email Addresses – All of the email addresses including those in the ship-to's are available when emailing reports or forms to a customer.

Created / Modified by – The user and date/time the record was created and the last time it was edited.

Sales Taxes Tab

Pricing – A customer can be set for 1 of 20 different sell prices. This will then set the item at the corresponding level set in inventory. The multi-currency setup can further define a price level for a particular currency. Then when a customer is set for that currency it will select that price level automatically.

Communications – A communication or note can be added to a customer for later follow-up. If it is assigned to a user and it has a due date added, then this will be presented to the user when it is due or

overdue every time they log into Spire. The communications tab will also be red if there are any notes for this customer.

Any number of notes can be added to a customer and have several options:

Subject – Gives the note a subject

Type – This groups notes by a type and must come from lookup list if used

Body – The details of a note

Assigned To – Who is responsible for this note or task

Number – A numeric field that be used for custom reports

Due Date – When the assigned communication/task is due for completion. If the user logs into Spire and there are communications that are due today or earlier they will be 'popped' in a message.

Completed Date – Enter a date here when the task is completed.

Print – Select if the contents should be printed on one of below:

Where – Select what document the message should be printed on. Spire's stock reports have these messages on them, however they are defaulted to hidden so your consultant can un-hide them for you. The choices are:

- Packing Slip
- Picking Slip
- Booking Order
- Invoice
- Order Confirmation
- Quote
- Purchase Order
- Sales Order
- Work Order
- Alert on Orders If the message is set as an alert, the message will be presented to the user when the customer is added to a sales order or when it is edited. If the alert is not set, the communications ribbon at the top of the sales order, will indicate that there is customer communication.

User Defined Fields – UDF's can be added to a customer to track extra information that Spire does not keep by default. The user can add additional tabs and define the fields and field types to store this data. The structure for the customer billing address can be different than the ship-to addresses.

Account Information – Shows the aged accounts receivable for this customer. The aging days that are used are setup in Company Settings/Accounts Receivable.

Statements & Invoices – User can select how the customer invoices and statements are sent. The choices are Form, Email, Form and Email or none. When printing, Spire does not use these settings, however this field is one of the columns on the customer list so the user can sort or filter by this and select all of the customers by form type before sending.

Discount – The default discount that is applied to the total sales order.

• Caution – this discount is applied after the line by line discounts.

Balance – The customers accounts receivable balance.

Limit – The customers credit limit.

Apply Finance Charges – When checked, finance charges will be applied to the customers AR. The 'Apply Finance Charges' button can be checked on the accounts receivable list or inside a customer AR screen.

Approved By – The initials of the user that lasted edited the customers credit type and/or limit.

Clear Approval – Clears the credit limit to zero.

Average Days to Pay – The average time it takes a customer to pay their accounts receivable.

Receivables - The GL account that this customers AR is posted to

Currency – The currency that the customer is billed in.

Payment Terms – The default terms that get added to a sales order. Once on the sales order it can be changed to other terms.

Bank Information – For Canadian banks, this is used for EFT to create a CPA1464 file (aka005) from all accounts receivable transactions that have payment terms of 'PAD'

- Transit Number The Customer's bank transit number
- · Institution The Customer's bank institution number
- Bank Account The Customer's bank account number

PO Number Required – When saving or editing a customers sales order the user will be warned that a purchase order number is required by this customer. Once the sales order is Processed, Shipped or Invoiced the PO number will be required.

Service Charge Default Exempt – If the Company Setting Sales Orders/Surcharges is active, this customer will not be charged this fee.

Inventory Levy Default Exempt – If a levy is set on an inventory item, this customer will be exempt from it.

| Misc. | |
| Special Code | |

User Type – This is an alphanumeric field that can have its label changed in Company Settings/Variables. This field is usually called 'Customer Type' and Spire's price matrix uses this to define pricing for groups of customers. This field also has an associated table where values can be selected from.

Misc. – This is an numeric field that can have its label changed in Company Settings/Variables.

Special Code – A code from A-Z can be added to the customer. It is not used anywhere in the program but simply a way to rank a customer and be able to filter by it.

Sales History – This is a list of all of the customer's sales history. It can be viewed at the invoice header level or details of all invoices. Filters can be set to limit the amount range of invoices shown. The invoice can also be drilled into to view and edit non financial information if the user has security to do so. The invoice can also be copied or credited when viewing it.

Accounts Receivable – This gives full access to the accounts receivable for this customer. Data can be added here and invoices can be paid here. You can also view the applied accounts receivable data for this customer. If a customer has a balance of zero and everything is fully applied, then this is the only place to be able to see a customers accounts receivable info.

Price Matrix – On this tab you can add/edit/delete and report on a customers special pricing. See the 'Price Matrix' Module for a full description.

Customers – Included Reports

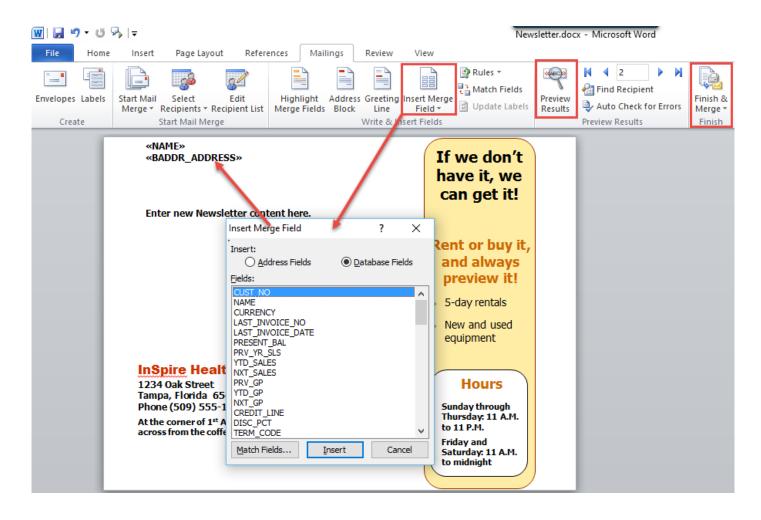

- Customer Statement
- Customer Statement Detailed
- #10 Envelope with Return Address
- #10 Envelope

Mail Merge

In Spire users can print or email merge the selected customers from within the customer list. To create a shorter list to send your merged document to you can create a filter for the customer list and then highlight the ones to merge with and click the merge button.

Microsoft Word will then open and you can choose to create a new document or you can choose to edit an existing document.

You will need to add the fields you would like to use for the data that should appear on the document by selecting "Insert Merge Fields" on the Word Mailings tab.

Users can then 'Preview' the results to see who will receive the mailing and then click "Finish & Merge" when ready to send.

The merged document can be either printed or emailed. If being emailed, select the email address from the Spire customer database, add a subject and click 'OK'. The user email will then merge the documents to the email address list, or if printed will merge print to the printer.

Sales Order List – Menu Items

This list may not be in the same order because the columns can be moved and removed. Also some columns like costs, have security settings so some users may not see them at all.

- Refresh Allows you to view orders that have been added by other users
- Filters Create a custom filter and save that filter to customize your view
- Export Export the filtered list to Excel or .csv including your filtered screen layout and column positions
- Add Add a new sales order
- Edit Edit an existing sales order
- Delete Delete a sales order
- **Print** Prints a sales order report. The arrow beside the print button allows the user to choose to print all sales orders or the selected sales orders
- Copy Copies the selected sales order
- **Requisition** Will create a requisition and purchase order for shortages on the selected order(s)
- Next Phase Moves the sales order to its next phase
- AR Payment Puts an un-applied payment onto the customers account
- Hold Holds a sales order that can only be released by a user with the rights to do so
- Process Processes a sales order and prompts the user to print a pick ticket
- Reprocess Allows users with the correct security to re-process and therefore re-print a pick ticket
- **Invoice** Invoices selected sales order(s)

- **Reopen** Order Moves an order that has been processed or shipped back to being open and therefore editable
- **Fill Back Orders** Selected orders will have back orders filled if there is now inventory to commit. This processes from the oldest to newest orders until stock is depleted
- Refresh Prices Sets prices to default to a new sell price, including if a user has overridden the sell price

Sales Order Header

To create a new Sales Order in Spire, begin in the main Spire window and select "Sales" from the left navigation menu.

Using the lookup icon you can navigate to the intended customer for this sales order. You can also enter search criteria about the customer and it will find them based on that search. For instance type the city and all customers within that city will be presented in the drop down list. Alternatively type the city name and then pres the 'F9' key and the complete list of customers with that city name will be short listed and ready for selection. You can also use a combination of words to search such as the contact name and the city and the list presented will be restricted to the results that contain both words.

Once the customer is selected the customers credit information will be displayed, If the credit limit background is red this means that the customer is over the credit limit or has unpaid invoices beyond their terms. The user must have the security setting User/Customers/Can See Customer Credit Info.

Note the red ribbon message. This means that the customer has notes that should be read.

Order Details - The choices for types of order are:

- Sales This is a regular sales order that will commit product immediately to the customer
- Booking Does not commit inventory and is used for future orders that can be committed once the due date has been reached

- **Standing** These are used for repeat orders. Once invoiced the order stays behind to be invoiced at the next pre-determind cycle
- **Quote** Used to send a quotation to a customer. It does not commit inventory until the user releases it to a sales order
- **RMA** Used for 'Return Material Authorization' and can use a different numbering sequence from regular sales orders
- Work Use for service type orders that can have a separate sequence number that sales

PO Number – Adds the customers PO number and if the customer is set to 'Require PO' in their profile then the user will be warned that a Purchase Order number is required. The order can then be saved without a PO but cannot be processed, shipped or invoiced until a PO number has been entered.

Ref No – The user can enter a reference to another document if required

Salesperson – The salesperson can be entered if the sale is to be tracked. There is a company setting, that if turned on, the salesperson must be added to the order before saving it. If the customer has a salesperson attached to their record it will populate this field with the salesperson as you add the customer to the order. There is another company setting available that will populate the order with the user code if it matches the salespersons code. Users need security to be able to change the salesperson code on an order.

Territory – The territory can be entered if the sale is to be tracked. There is a company setting, that if turned on, the territory must be added to the order before saving it. If the customer has a territory attached it will populate this field with the salesperson as you add the customer to the order.

Ship to – Users can select from any shipto attached to the customer. When using the lookup the user can click on 'All Addresses' and they will be able to select any customer in case the order needs to be drop shipped elsewhere.

Ship Via – Select from any shipping carrier that has been previously set up in Edit/Ship Via. The user can also free type in the ship via description field if using a miscellaneous shipper.

FOB – Free On Board is a term in international commercial law specifying at what point the seller transfers ownership of the goods to the buyer. Many companies use this field for other data they want on the order instead of FOB.

Contact – This area is for adding the contact of the person that gave you the order. You can free type in the name, Phone, Fax and email. You can also use the lookup to select the contact information for any of the customers main or shipto contacts even if the shipto is not on this order.

Order date – Usually the day that you created the order but it can be edited to any date.

Required Date – The date that the customer want the goods. This is useful on the sales order list because the user can sort by this date column to see what needs to be shipped today.

Invoice date – This is the date that the order needs to be invoiced. The user can be set to:

- Always Current date means that today's date will get added as soon as the user invoices the order
- Current Data unless Invoice date is filled Means the user can add a date but if they do not it will
 use today's date
- Always ask for date if not filled in Means the user must enter an invoice date

Repeat – This option is available for standing orders. The user can select from daily, weekly, monthly, yearly or custom. If custom is selected they can choose any non standard repeat cycle using one of the calendar options as a start. When a standing order gets invoiced the invoice date will automatically be advanced by the repeat cycle. The user can set a filter on the sales order list for all standing orders due this week and simply highlight all of them and print or email invoices to the customer.

Phase – Custom phases can be added to a sales order. Preset phases can be set up under Edit/Phases or on the sales order phase lookup dialog. Each phase is given a code, a description, a report template and a next phase. If a report template is added to a phase and the order is moved to that phase, any report that has that template name will be presented for printing. The next phase needed is triggered when the user clicks the 'Next Phase' button on the sales order list, or from inside an order and then the order will be moved to the 'Next Phase'. This feature is very useful for user that need their order to go through a custom set of procedures.

This tab displays the customers bill-to information and contacts. They are added to the order when it is first created. Therefore if the customers address and contact info changes while an order exists, the order will no longer have the correct information. This includes customers email addresses that will be used when sending orders and invoices to a customer. There is a button in customer edit that the user can click that will update any open sales orders with the customers new information.

Any number of notes can be added to an order that can have several options.

Subject – Gives the note a subject

Type – This groups notes by a type and must come from lookup list if used

Body – The details of a note

Assigned To – Who is responsible for this note or task

Number – A numeric field that be used for custom reports

Due Date – When the assigned communication/task is die for completion. If the user logs into Spire and there are communications that are due today or earlier they will be 'popped' is a message.

Completed Date – The field to enter a date when it has been completed.

Print – Select if the contents should be printed on one of below:

Where – Select what document the message should be printed on. Spire's stock reports have these

messages on them, however they are defaulted to hidden so your consultant can un-hide them for you. The choices are:

- Packing Slip
- Picking Slip
- Booking Order
- Invoice
- Order Confirmation
- Quote
- Purchase Order
- Sales Order
- Work Order

Alert on Orders – If the message is set as an alert, the message will be presented to the user when the order is edited. If the alert is not set the communications tab on the order simply turns red.

This tab allows you to see all sales orders that this customer has open at the moment. This is very helpful to make sure you are not duplicating an order someone else has already entered for this customer. You can view the orders individually as above and click the details tab to see every item on every order on one list. You can also double click an order to view, edit, process, ship or invoice it.

This tab shows what the customer has bought in the past and what price they paid for it. The user can set a filter and then choose to use it as their default view to only see, as an example, a certain date range.

There is also a button that stays pressed until you change it so that you would only see items that are not the order you are currently on.

The user can also multi-select items from this history view and click the 'Add to Order' button and they will be added to this order.

F7 is a shortcut / Hotkey to get to this history screen from the main order.

User Defined fields allows you to add any number of extra fields to a sales order that pertain to your sales orders for your business. To be able to edit the design of the UDF (User Defined Fields) the user needs to have the correct security access. For a full description on UDF see <u>User Defined Section</u>

This screen allows the user to scan in the items as they are being shipped. Start by clicking on "Zero Qty" to start from zero shipped. It will not allow a scan on an item that is not on the order, and will not allow the user to over-ship an item on an order. It will sound an alert by beeping in both cases. The user can enter the quantity before scanning the item. The ship quantities will all go black when the order is fully shipped.

Standing Order

Video Instruction – How to create standing orders with an invoice repeat cycle.

After invoicing a standing order Spire does not ship the item for next time so that it doesn't commit items too early. Here is how it is handled.

Create a custom filter call 'Standing' (or whatever) that just shows the standing orders. Make sure one of the columns exposed is the Back Order column.

- Highlight all orders being invoiced and click the 'Fill Back order" button on the top of the list. Do this even if the B/O column does not have a check
- If there are not back orders as shown by the B/O column, fix them by first receiving product, or go into the order and force ship them. (if allowed)
- Highlight all orders to be invoiced and click 'Invoice' on the top of the list.
- After invoicing all physical item will now not be committed again.

See this video for clarification -

Insert – Inserts a blank line above the highlighted line so the user can keep items grouped.

Delete – Deletes the highlighted line

Comment – Brings up a comment dialog. The user can either enter miscellaneous comments or select from previously created comments. When looking up the comments the user can add template ones to the list for use later.

Serial Numbers – When an item with a serial number or lot number is added to an order this button will highlight so the user can select a serial or lot number. If the item is setup to automatically select the serial/ lot number based on oldest it will populate the order with the serial number after selecting the item. The user can still click the serial number button and change to another serial/lot number if required.

Add Job Header – Add a Job Header is like a comment but it adds a grouping to the order based on it. The job header shows on the order bolded and by default prints bolded. They can also be sub-totaled on sales order reports including invoices.

UDF – Allows the user to add data to the user defined fields. Each line of the sales order can have its own data. The structure is also edited on the dialog, but only those with the right security permissions can edit the structure.

Scan Items – Clicking this button brings up a quick POS like dialog to add items to the order. The user can scan an item and it will be added to the order with quantity 1 and the dialog will remain open. Scanning another of the same item will increase the quantity. The user can also directly scan a serial or lot number and it will add the item with that number to the order.

Fill – Clicking this fills back orders for a product that is now in stock. It can be for the highlighted line(s) or the complete order.

Prices – This is used refresh selected or all prices to the updated price for this customer. There is also the option to store either the selected or all prices on the order to the customers price file (price matrix). When you choose to store the price it will also ask if you want the prices that were not changed on the order to be included in the customers price file. Additionally it will ask if you want to make this customers price apply to all of the warehouses or just the one currently on the order. Lastly there is an option to only save the price(s) to the ship-to that is on this order.

To add an item to a sales order you can type in a part number and it will auto-complete and show the 10 closest matches. Alternatively you can type in a portion of text and hit the lookup or F9 key and it will search all inventory items for that text. It looks at code, description, notes, product codes, vendors and much more and shows a shortlist of the items containing that text.

Notice that the inventory lookup dialog is also an inventory edit. The user can add/edit/delete items on the fly if they have the security permissions to do so. This means that by editing the item on lookup they can see everything about that item, including who has it on another sales order or what purchase orders the item is coming in on and when.

They can also set a filter for what inventory they want to see.

Once selected the item is added to the order. If the item has no stock and there is an 'alternate' part number assigned to it in inventory then the user will see this screen.

They can either back order the original item, or accept the alternate.

The image above shows that when an item on the order is highlighted, it shows the status of it in inventory.

Available – This is the onhand quantity minus the committed quantity.

On Hand – This is the amount that is in stock and includes inventory that has been committed.

Committed – Is the quantity that is in on sales orders, production orders and inventory adjustments/transfer that are in transit

Back Order - Quantity that is is back ordered on a sales order

On Order – The quantity that is on an issued purchase order and not yet received.

Expected – The due date of the last PO created for this item

The order of these fields will vary based on the way the user has set them. Some of the fields will not show up for users that do not have the security permissions to see them.

Part No – The item selected from inventory or a miscellaneous code.

Description – This is the description pulled from inventory. If the item is miscellaneous then the user can type their own description. If the user has the security setting Sales Orders/Edit Description turned on, they can also edit the default description of an inventory item once it is on the order.

Order Qty – The quantity the customer orders

Ship Qty – The amount you are able to ship. The user can always reduce this amount and the remainder will get back ordered. However unless the company setting Inventory/Prohibit overshipping is unchecked the ship amount cannot be increased more that the inventory available amount.

B/O Qty – The amount that we are not able to ship because of shortages.

Retail Price – The price of the item based on the customers price. This includes price level and price matrix.

Disc – This is the discount percentage off the retail price above

Unit Price – The discounted price

Current Cost – The cost of the item the last time it was received

Average Cost – The average cost of all of the quantities of this item that we have in stock. This average cost gets updated ever time more of it is received.

U/M – The selling unit of measure. The default unit of measure gets selected when the item is added to the order but if there are other available selling units of measure for this item the user can select one from the dropdown available. The item will then get re-priced based on its price set for that UOM in inventory.

Conversion Factor - The unit of measure conversion used if it has one

Tax1 – This tax flag gets set from the customer default but can be overridden

Tax2 – This tax flag gets set from the customer default but can be overridden

Vendor – The vendor that this item is purchased from by default, but can be edited to another vendor. This vendor will be used if the user creates a requisition / PO from within the sales order.

Levy – These are setup in inventory so that a levy (aka environmental fee) can be charged when it is sold.

Ext Levy – The extended levy is calculated based on quantity shipped on this order line.

Ext Price -The extended discounted price for this line item

Margin (Curr) - The margin percentage made on this line based on the last price paid for this item

Margin (Avg) – The margin percentage made on this line based on the average price paid for this item

Employee – An employee can be added to each line if it is required for commission or tracking purposes

Employee Name - The employee name for this line

Price Reason – If the special price setup for this item in price matrix has a reason attached to it, it will be displayed in the field. Many companies use this field for customer specific part numbers. The reason code can be set with a colour so that it is prominent on the order.

Created By - The initials of the user that added this line to the order

Modified By – The initials of the user that last modified this line on the order

Location - The warehouse location/bin that this item is set to in inventory

Pack Size – The usual case size of this item

Memo – The user can enter many lines of text in this field that will be attached to this line of the order. By default this memo is not printed on any reports/forms

Inv. Committed – This is the committed quantity of this line of the order based on the multiplier on the unit of measure. If the UOM CASE has 12 of the stocking UOM and we are selling 10 of them the Inventory Committed field will have 12

Required Date – The date the customer requires this line of the order. It defaults to the 'Required Date' in the header of the order. If the date on the header is edited the user will be asked if they want to update all of the detail lines as well.

Product Code – The product code of the inventory item on this order line

Inventory GL – The default inventory GL account for this inventory item. (see warning below)

Cost of Goods GL – The default cost of goods GL account for this inventory item (see warning below)

Revenue GL – The default revenue GL account for this inventory item (see warning below)

If the user has the security setting General Ledger/Edit Journal Entry While Posting active, then they can lookup or type in a different GL account. Use caution when doing this because you are manipulating the default posting setup and if done without the correct knowledge it can produce undesirable GL results.

Reference No – Text can be entered here so the user can track line info. For instance if an item's warranty needs to be tracked back to the supplier, the suppliers invoice number can go here. By default this field does not print on any reports or forms.

Weight – The weight of an item multiplied or divided by its unit of measure conversion factor. Note that the weight field will be red if there is no weight for this item. The total weight on the footer of the order will be red as well if there is any item in the order that is missing its weight. The user can edit this weight field but it does not update the weight in inventory so it is important to update it as well.

Ext Weight – The extended weight based on the shipped quantity of this item

UPC Code – The UPC code that was scanned or typed for this line of the order. Each item can have many UPC codes and each unit of measure can also have its own UPC.

Target Type – When a purchase order is created through requisitions for this sales order it fills this field with "Purchase Order". If the item was sent to Production then it is "Production Order".

Target No – The Purchase Order number or Production Order number that this line of the order got sent to.

Sales Order Footer

| Freight | 25.00 | Fuel Surcharge | 20.00 | | Average GP | 51.35 % | 87.81 | BC P.S.T. | 13.72 | | 219.5 |

By default these amounts are based on the shipped quantity except in the case of a quote and a booking order, which are based on the order quantity.

| 🋒 Sales Order - 0000800036 Jackson Fitness Center | × | 5 |
|---|-----------------------|---|
| | | 5 |
| 👷 Open Customer 💠 View Compact 📰 Process 📰 Reprocess 🚔 Invoice 🍚 Next Phase | Totals By Ordered Qty | |

However if the user clicks the button on the header of the sales order called "Totals By Ordered Qty" the totals will be based on order quantity of all sales order types.

*This button will stay depressed until the user un-selects it, even if they close Spire completely, so if the total is not as you expect check this setting.

Total Weight – The total weight of all items on the sales order. If this number is red then that means that not all items on the order have a weight. The user can override this just before shipping if it is known to be incorrect.

Freight – This is the freight for this order and it is calculated based on the shipping charges setup in company settings default unless a shipping method has been setup with freight amounts under edit/Ship Via. This freight is editable by the user if they want to change it before invoicing.

Discount – This discount comes from the customer default discount but is editable by the user. This total order discount is applied after line by line discounts so be sure that is the result that you want.

Surcharge – The surcharge is calculated based on the percentage put onto the inventory product code (aka category). It can be overridden by the user but once it is it will never re-calculate for this order.

| 🗾 Product | Code - | _ | × |
|--------------|--------|---|-------|
| | | | ? |
| Product code | LABOR | | |
| Description | Labor | | |
| Margin | | | 0 |
| Surcharge | | | 5 |
| Dept | 6 | | Q |

The main setup for the surcharges is done in company settings under sales orders/Surcharges. You have to set:

- Tax Code 1 Select id tax 1 is charged on the surcharge
- Tax Code2 Select if tax 2 is charged on the surcharge
- Min Set the minimum amount for each order's surcharge
- · Max Set the maximum amount to charge for each order's surcharge
- GL Account The GL income account to post the surcharge to
- · Alias What you want to call the surcharge. ie: 'Fuel Surcharge' or 'Shop Charge'

| Orders | Process/Invoicing | Surcharges | Messages | Misc | |
|----------|-------------------------|------------|----------|------|-------|

| GL acco | unt 51900/ | | | | ۹ |
| Alias | Fuel Surcharge | | | | |

Current GP - The gross profit amount and percentage for this sales order based on current cost.

Average GP – The gross profit amount and percentage for this sales order based on average cost.

Sub Total – The sub total of the order before taxes and freight

Tax1 - Total tax 1 for the order

- Tax2 Total tax 2 for the order
- Total Grand total of the order.

| | mor | | | | | | | | | | | | O de | Details - | | | | |

Save – Saves the order but leaves it open. This is useful if you are creating a sales order and the customer wants the order number. Even though the order number is displayed, it is not permanent until saving because another user on the network may save before you.

Save Close – This saves and closes the order.

Delete – Deletes the order and saves the details that were on it into a deleted archive for audit purposes. You must enter a reason you deleted this order.

Print – Brings up the print dialog with all reports that have a template of 'Sales Order' in the Crystal Report 'Summary Info'. These reports can be printed, emailed or both. If emailed, the user will be presented with all of the email addresses available on that sales order including the main one, the 3 bill-to contacts and the 3 ship-to contacts. If the email addresses were not on the customer before the order was created they will not be available unless when the user added the email addresses to the customer, they clicked the "Update Orders' button on the customer edit dialog. The user can also manually type in an email address.

Open Customer – This opens the customer edit for the customer that is one the order. This allows you to see all information about this customer including their special pricing, sales history and accounts receivable info.

View Compact – Once you have entered your header information this button collapses the a lot of the header information to give you a lot more body room. This is especially helpful if you have a lower resolution monitor. The button is remembered even if you exit Spire so if you find info missing it is probably because this button is pressed.

Process – The 'Process' button only appears if the process feature is turned on in company settings. The process button puts the order into a processed status and brings up the report dialog with all reports that have the word 'Process' in the Crystal Report 'Summary Info'. Usually the pick slips are printed here.

These reports can be printed, emailed or both. If emailed, the user will be presented with all of the email addresses available on that sales order including the main one, the 3 bill-to contacts and the 3 ship-to contacts. If the email addresses were not on the customer before the order was created they will not be available unless when the user added the email addresses to the customer, they clicked the "Update Orders' button on the customer edit dialog. The user can also manually type in an email address.

Ship – The 'Ship' button only appears if the ship feature is turned on in company settings. The ship button replaces the Process button once an order is processed and puts the order into a shipped status and brings up the report dialog with all reports that have the words 'Ship Order' in the Crystal Report 'Summary Info'. Usually the packing slip is printed here.

These reports can be printed, emailed or both. If emailed, the user will be presented with all of the email addresses available on that sales order including the main one, the 3 bill-to contacts and the 3 ship-to contacts. If the email addresses were not on the customer before the order was created they will not be available unless when the user added the email addresses to the customer, they clicked the "Update Orders' button on the customer edit dialog. The user can also manually type in an email address.

Reprocess- If the user has the security setting then they can process an order again. Caution should be taken to make sure that the picking report that was previously printed is replaced and not duplicated to prevent an order from being picked twice.

Invoice – This button assigns the invoice number to the order, unless the override invoice setting is turned on. The payment method dialog will be presented unless the user setting "Sales Orders/Default to "On Account" is turned on.

This payment screen gives you the financial detail of the sames order including the customers credit situation. If the customer does not have enough credit limit available then the user will be prompted for an override. If they have the security they can just click OK, otherwise someone else with the security can come and put in their user name and password.

The credit limit can also be increased if the user has the security permissions to do so by clicking the credit limit button.

Select the payment method and click invoice. If there is insufficient credit then 'On account' cannot be selected.

A shortcut to selected a payment method is to type the first character of the payment method. ie: 'V' for Visa.

If cash is selected the user can enter the amount tendered and if it is more that the amount owing the change will be displayed.

Once the payment method is selected all invoice formats with the word 'Invoice' in the in the Crystal Report 'Summary Info'.

These reports can be printed, emailed or both. If emailed, the user will be presented with all of the email addresses available on that sales order including the main one, the 3 bill-to contacts and the 3 ship-to contacts. If the email addresses were not on the customer before the order was created they will not be available unless when the user added the email addresses to the customer, they clicked the "Update Orders' button on the customer edit dialog. The user can also manually type in an email address.

Next Phase – This button moves the sales order into the next phase in its sequence.

Total by Ordered Qty – Changes the footer totals to be calculated by the order quantity instead if the shipped quantity. This is very useful for seeing what the complete order is worth when there are back orders on it. This button stays depressed until the user clicks it again even if they exit the program.

Requisition – This brings up the requisition screen populated with all of the orders shortages but includes items that do not need ordering with a zero quantity. The user can override the zero quantity with the order quantity in case they want to drop ship the complete order from the supplier to the customer.

The requisition will have the vendor on the items that need ordering because it is passed from the sales order detail line. The user can however still change the vendor on this requisition screen. The quantities and prices can also be edited before processing.

If the process button is clicked the list of products on this screen will get put onto a PO for each vendor. It will depend on the user setting "Purchase Orders/Add to existing Open Orders" as to whether a new Purchase Order will be created or the items will get added to an existing open (un-issued) PO.

If the save button is clicked instead of process, the requisition for this sales order will be saved in the requisition module for later ordering from the supplier.

When the PO is processed it will enter the PO number onto the sales order detail line for later reference. It will also enter the customer and sales order number onto the purchase order detail line. Therefore if the customer calls later to find out whre the product is for a particular order it will be easy to find the PO it was placed onto.

This is very useful to the person receiving the product so that they know who it is for, and so they don't accidentally shelve the product.

Deposits Navigation CAUTION – do not enter an email address manually when you are sending a group of sales orders. This will cause all of the orders to be sent to that one address instead of merging them to each customer.

Sales Orders – Included Reports

- Work Order
- Sales Order List
- Sales Order Details List

Save – Saves the price.

Save & Close – Saves and closes the price.

Copy – Copies a price record.

Whse – Warehouse for the price. If this is left blank then the price applies to all warehouses.

Part No – The item getting the price.

Unit of Measure – The UOM of the item getting the price.

Product Code – Used if applying the price to a product code. Can only be used if Part No is blank.

Customer – The customer getting the price.

Ship To – Use this if the price is restricted to only one of the customer's Ship To's.

Territory – Use this if the price applies to a complete territory.

Type – Select a 'Type' from the lookup list if the price is for a group of customers. Each customer would then get assigned to that group in customer edit/General/Type.

Date Range – The starting and ending dates for this price. Many ranges can be added as long as they do not overlap. If a sales order is created for a past date, and a price matrix record exists for that date the order will be given this price.

High Priority – Makes this price the highest priority. It overrides all other methods that a could be assigned even if there is a lower possible price for this customer for this item. (See Price Matrix Scoring Below)

Default Price – The price the customer would get if they did not get this special price. It comes from the level that the customer is set for and this is the price that price matrix discounts would be based on.

Vendor – If there is a GL account in Company Settings/General Ledger/Differential GL Account then a vendor can be added and a contract cost added below.

Price Method – The method for this price. The choices are:

- Price A set price for this item.
- Discount A discount off of 'Default Price' as described above.
- Margin If selected the sell price will be based on this formula. InventoryCurrentCost / (100-Margin%/100)

Average Cost – The average cost from inventory.

Contract Cost – The cost that will be applied when selling to this customer. If this cost is different than the average cost, the difference will be posted to the GL account set in Company Settings/General Ledger/ Differential GL Account. This is usually a vendor rebate account. This way when selling an item that has a contract cost the inventory GL account is still credited by the average cost.

Price Reason – The reason this price is being offered. It could be a contract number of something like 'FLYER'. This reason will appear on the sales order detail line.

Current Cost – The current cost from Inventory.

Add – Add a price, discount or margin.

Delete – Deletes a price.

- Min Qty Adds a quantity if the price has a minimum quantity.
- Price The Price, Discount or Margin amount.
- **Price per X** If an item and warehouse has been selected then a unit of measure can also be selected for this price.
- Margin The margin that this item will obtain based on this price. Only shows is item and warehouse are selected.

This list can be filtered and exported if mass updates need to be done using the Spire import routine. Be sure to include the record number if the import should replace the prices that are already there. If it is not included and a price already exists then the user will get a duplicate error on import.

Save Prices from Sales Order

Prices can also be added from a sales order or quote. Once an order is created the user can select the prices button and choose:

- Store All Price This will save the edited prices to the customers price matrix file.
- Store Selected prices This will store all prices from this sales order to the customers price matrix file.

Once clicked the user will be given these options.

Update Records in the price matrix based on the following criteria:

| 🛒 Update Customer Pricing/Tax | ? | × |
|---|-------------|----|
| Update records in the price matrix based on the following Create records for regular prices Apply to all Warehouses Restrict records to shipping address | g criteria. | |
| <u>O</u> kay | Cano | el |

- Create Records for regular prices Even if the price is note edited this will add a record to the customers price matrix file. They will get regular price for this item. However if the regular price changes they will still continue to get this stored price unless the user also updates it.
- **Apply to all Warehouses** Apply the price to all warehouses. This way the customer gets the same price even if they go to another location.
- Restrict records to shipping address If selected then only the ship to on this sales order gets this
 added to their price matrix file. If not selected then the billing and all ship to addresses get this price.
 If a ship to is not on the order then it is grayed out.

Once added and saved the user can view or edit them on the list.

Price Matrix – Included Reports

Contract Cost

The contract cost option in price matrix allows the cost of an item to be set for a customer or group. The true margin is shown when the item is sold to the customer and the inventory GL account is credited with the amount that was paid for for that inventory item.

Using this feature requires some setup.

Contract Cost Differential Account

In Company settings a GL account can be selected to post cost differences when using contract costs for customers. Entering a differential account activates the feature. The vendor and vendor cost fields only appear on price matrix records if this differential account has been configured.

Point of Sale

The Point-of-Sale (POS) module is a quick way to enter sales that can be processed without the use of a mouse. There are keyboard shortcuts always visible at the top of the screen.

If there is a url set in Company Settings/Sales Orders/Misc/Home Page then it will be displayed on the POS left pane. The html document (webpage) it points to can be on the local computer network or on the internet. The example below shows a webpage that is a signup for the companies newsletter. In this view the user can enter the required information and submit it.

F1-Help – Launches the help manual.

Close – Closes the order and if un-posted order exists, asks "Are You Sure..."

F2-Clear – Clears the items off the order.

F3-Customer – Click to select a customer. When the customer screen comes up, select a customer, and if you want to use that customer as the default for future POS orders for this user, check "Default POS Customer"

F4-Edit Items – Highlight a line and click the F4 key or enter to edit the line.

F5-Invoice/Tender – Brings up the payment screen. Choose a payment method by typing the first character. ie- if selecting Visa enter a 'V'. The payment can be split over more than one method.

F6-Order Entry – Transfers the POS order to a full sales order. This gives access to everything the user can do when in a sales order. This includes seeing the customers sales history and therefore pricing. Hitting F6 in the sales order brings it back to POS. If the order is invoiced in POS the report is usually a small POS ticket, but if invoiced while in sales orders it prints a full size invoice.

F7-Edit Comment - Adds a comment to the POS order

F9-Inventory Lookup – Lookup for inventory

Video Instruction of POS

Sales Cash out

POS – Included Reports

Accounts Receivable

When first going into accounts receivable the aged list will be shown. This list can be sorted and filtered.

Add – Adds an AR entry.

View Receivables – Opens the receivables records for the selected customer.

Apply Finance Charges – Applies finance charges to the selected customers. This relies on the finance charge rate being set in Company Settings/Accounts Receivable/Monthly Interest Rate (%) and a setting on each Customer/Billing/Apply finance charges.

Export PAD – Exports a EFT file in CPA1464 (aks005) format for all invoices that have the terms of PAD.

Refresh – Refreshes the AR list for any new transactions added by another user on the network.

Filters – Sets any number of filters that are required to only see the data wanted.

Search – Searches the customer records for word(s) entered.

Export – Exports the filtered list to Excel or .csv.

Print – Prints reports with the <u>template of 'Accounts Receivable List'</u> for all filtered or selected records reports.

Video Instruction – Accounts Receivable

Header

Open Customer – Opens the customer to see all their information including sales history and open sales orders.

Apply Finance Charges – Applies finance charges to this customer. This relies on the finance charge rate being set in Company Settings/Accounts Receivable/Monthly Interest Rate (%) and a setting on each Customer/Billing/Apply finance charges.

Navigation – Navigates between AR records based on the filtered and sorted list.

Contact Info – Customer contact and credit information.

Items

Refresh – Refreshes any new entries other users have posted.

Print – Prints report with the template of 'Accounts Receivable'

Add – Adds an entry to the customer's AR.

Apply – Applies payments or customer credits to an invoice.

Payment – Pays the selected invoice(s). The arrow beside the payment button is to void a selected payment. When voided it will automatically unlink.

Hold – Holds an invoice so it cannot be paid.

Show All – Show all entries including paid and applied.

NOTE that the payment is shown on each invoice but you will not see the payment total.

Show Debits – Puts the payment on top with the invoices it paid indented below. The Show All button will also need to be depressed.

Payment is shown first with the invoices indented below. This makes it very clear what invoices the payment included.

Expand All – Expands the links for all transactions so as to see the invoices and related payment.

View Journal Entry – Views the journal entry of the highlighted transaction.

View Invoice – Views the invoice for the highlighted transaction.

Notes

Notes – Any number of notes can be added to accounts receivable.

Attachments

Attachments – Any number of attachments can be added to an item. Once attached the user simply double clicks the attachment and it will open in the default viewer for that type of document.

User Defined

User Defined – User defined fields can be added to track and/or print. (Spire UDF license required).

Type – AR entry can be one of 6 types.

- Credit Memo
- Debit Memo
- Invoice
- Payment
- Service Charge
- Write Off

Customer – Select a vendor to post to.

Date – The date for the transaction.

Terms – The terms given for this invoice.

Transaction no. – The assumed GL transaction number. If another transaction is posted after this number is assigned, then the transaction will be given the next available number.

Post Automatically – If checked the entry will post using the default accounts set in company settings or the customers default sales account. If unchecked the user can redirect all of the entry except the amount posted to accounts receivable.

Reference no. – Usually the invoice number.

Customer PO – Customer's purchase order number,

Memo – The user can enter a memo for this entry.

Tax1 – Tax 1 for this transaction that is automatically calculated based on how taxes are set for this customer.

Tax2 – Tax 2 for this transaction that is automatically calculated based on how taxes are set for this customer.

Subtotal – Total before taxes.

Total – Total of the entry including taxes.

Type – Hard coded with "Payment".

Method – Payment method

Date – Date for the payment.

Print Receipt – Check if a payment receipt is required to print or email

Transaction – The assumed GL transaction number. If another transaction is posted after this number is assigned, then the transaction will be given the next available number.

Post automatically – If checked then the journal entry will be posted without the user editing it. If unchecked then the user will be given the opportunity to edit it before posting. The ability to edit the posting is a user security setting in Users/General **Reference** – Usually the customers check number or if paid by credit card the user can enter Mastercard or Visa.

Memo – A memo can be added for this payment.

Terms Code – The terms code that was used for the amount

Terms Description - The terms description that was used for the amount

Balance – The balance of the transaction

Pay Amount – User can override this and the invoice will get partially paid have the payment linked to the amount.

Discount Amount – The discount amount. This is calculated by the terms but can be edited before posting.

Discount % – The discount % being offered.

Give Discount – Check to give the discount. Amounts that fall within terms will automatically be checked but user can override.

Total – The amount being paid. It is the sum of the transactions selected for payment.

AR – Included Reports

Vendor No – Select a unique code for this vendor

Name – Enter the vendors legal name

On Hold – Holds the vendor so no transaction can be entered

Status – Active or Inactive. Inactive hides the vendor from display unless the user has 'Show inactive Vendors' set on in <u>User Settings/vendors</u>.

Billing Address – The company billing address and contact information. Contacts 1 – 3 labels can be renamed to something that makes sense in <u>Company Settings/Vendor</u>

Remit to – The name and address that will print on checks if Remit to exists. To add a 'Remit to' click the + at that the bottom of the list. Leave the address code blank and tab off. It will automatically add the 'Remit to' code and then user can enter the name and address.

Sales Tax Tab

| Address | Sales Taxes | Order Defaults | Communication | Attachments | User Defined | |

| D | ۹ | | | | 0.0 | |
| | | | | | | |
| | | | | | | |

- Tax1 Select a tax from list that was created in Edit/Sales Taxes
- Tax2 Select a tax from list that was created in Edit/Sales Taxes
- Tax3 Select a tax from list that was created in Edit/Sales Taxes

An exempt tax number can be added if this tax is not paid to the vendor. In Canada Tax 2 exempt number from <u>Company settings/General/Tax Info</u> will be added automatically when creating a new vendor. Remove this number if the tax is to be paid.

Order Defaults

| Address | Sales Taxes | Order Defaults | Communication | Attachments | User Defined | |
|----------|-------------|----------------|---------------|-------------|--------------|--|
| Order De | faults | | | | | |
| Shinning | Method | | Q | | | |

Shipping method – Shipping method that gets added to purchase orders by default for this vendor.

Communications

| Address | Sales Taxes Order | Defaults | Communication | Attachments | User Defined | |
|--------------|--------------------|------------|---------------|-------------|-----------------|----------------|
| \$ \$ | Filters 🔻 | | | | 💁 Export 🛛 🕂 | / 🗙 🖶 • |
| Attention | Subject | Created Da | te Created By | Due Date | Completion Date | Display Type |
| Alert | PO minimum \$5,000 | 4/6/2016 | SS | | | Purchase Order |

Any number of communications or notes can be added to a vendor. The example above shows how you can add a note that is set as an alert. When the vendor is added to a purchase order the message "PO Minimum \$5,000" will pop up.

Attachments

| Address S | Sales Taxes | s Order Def | auits | Communication | Attachments | User | Defined | | |

| Warehouse Loo | ation | | https:// | www.google.ca/ma | aps/place/1234+Kni | ght+ | SS | 2016-04-06 | 1 |

Any number of attachments can be added to a vendor. The user browses for the file to attach to the record and gives it a subject and saves it. Then by double clicking it the attachment will open in the computers default program for that type of file. The example above shows a link that was saved to a Google map. When double clicked Google Maps will open to that location.

This list may not be in the same order because the columns can be moved and removed. Also some columns, like costs have security settings so some users may not see them at all.

Order No – Purchase order number. This is assigned sequentially when creating the PO. The starting number can be edited in <u>Company Settings/Sequence Numbers</u>

Vendor No. – The vendor's code

Vendor Name – The vendor's name

Status – The status on the PO. It can be:

- Open This means that is is still editable and has not been sent to the vendor yet.
- Issued Usually means that the vendor has received a copy of the purchase order. With the correct security permissions the user can un-issue and then edit the PO. Care should be taken to make sure the vendor has the correct copy of the PO.
- **Received** Means that this PO has had some product received on it. It can be un-issued and edited, but the lines that have had receipts cannot be changed.

Order Date – The date the order was created. This date can be edited.

Warehouse – The warehouse the user was set to when the PO was created

Required Date – The date that is required for the items on the PO to arrive

Received Date - The date of the last receiving on this PO

Sub Total – The sub total of this PO before freight and taxes

Received Amount – The received to date value

Remaining Amount – The value still to be received

Total - The total with taxes and freight

Reference No – An external document number

FOB – Free On Board is a term in international commercial law specifying at what point the seller transfers ownership of the goods to the buyer. Many companies use this field for other data they want on the order instead of FOB.

Vendor Order Number – A confirmation number given by the vendor for this PO.

Buyer – The person that placed the order with the vendor.

Ship Via – How the product on this PO is to be shipped

Created By – Users initials that created this PO

Modified By – User initials that last edited this PO

Terms Code – Payment terms for this PO

Currency – The currency that the vendor sells product in.

Phase ID – The Phase that this PO is currently in.

Vendor – The vendor's code and name

Vendor Order Number – A confirmation number given by the vendor for this PO.

Notes – This note comes from the vendor record in a field called 'Notes' Used for that one important item like in the example where it says "Always place order with Bill"

Reference No – An external document number

Status – The status of the PO can be:

- **Open** This means that it is still editable and has not usually been sent to the vendor yet.
- Issued Usually means that the vendor has received a copy of the purchase order. With the correct
 security permissions the user can un-issue and then edit the PO. Case should be taken to make sure
 the vendor has the correct copy of the PO.
- Received Means that this PO has had some product received on it. It can be un-issued and edited, but the lines that have had receipts cannot be changed.

PO No – Purchase order number. This is assigned sequentially when creating the PO. The starting number can be edited in <u>Company Settings/Sequence Numbers</u>

Order Date – The date the order was created

- Required Date The date that is required for the items on the PO to arrive
- Last Received The date of the last receiving on this PO
- **Receive Date** Enter the date just before receiving the PO
- Phase The Phase that this PO is currently in.
- Ship To Customer The customer that this PO is being shipped to.
- Warehouse The warehouse the user was set to when the PO was created
- Ship Via How the product on this PO is to be shipped
- Ship Address ID Address ID of Ship-to customer.

Buyer – The person that placed the order wit the vendor.

FOB – Free On Board is a term in international commercial law specifying at what point the seller transfers ownership of the goods to the buyer. Many companies use this field for other data they want on the order instead of FOB.

This screen allows the user to scan in the items as they are being received. Start by clicking on "Zero Qty" to start from zero received. It will not allow a scan on an item that is not on the order, and will not allow over receiving of an item on an order. It will sound an alert by beeping in both cases. The user can enter the quantity before scanning the item. The receive quantities will all go black when the order is fully received.

Note that the item that is highlighted on a PO shows its status in inventory. The user can see Available, On Hand, Committed, Back Ordered, On Order, and Expected Due Date.

Add – Adds a new line above the line that is highlighted.

Delete – Deletes the selected line.

Serial Numbers – Selects serial or lot numbers when receiving the items.

Scan Items – Puts the PO into scan mode so that items can be added with a bar code scanner one at a time.

Comment – Adds a comment line that is printed on the PO.

Show UDF – Allows the user to add data to the user defined fields. Each line of the purchase order can have its own data. The structure is also edited on the dialog, but only those with the allowed security can edit the structure.

Receiving – Clicking the receiving button allows the user to receive the complete PO. They can also select 'None' to remove the received quantity before clicking the 'receive button in the header of the PO.

Labels – Clicking the labels button passes the quantity received on this PO to the dialog below to print labels for the items.

- Set Quantity to one of each label
- · Set quantity to on-hand for each item
- · Set how many blanks to print first in case some of the labels on the sheet are used
- · Once all selections are made they can print the labels required

Detail Lines Info

Partno – The warehouse and part number. The item can be selected from inventory or a miscellaneous non-inventory code. Each user has a setting under <u>Edit/Users/Purchase Orders</u> to set permission for purchasing non-inventory items. The choices are 'Okay, Not Allowed or Prompt".

Description – Description of the item ordered that comes from inventory but is editable by the user.

Min Qty – The minimum quantity the vendor sells of this item.

Order Qty – Quantity ordered. By default this will be filled with the suggested order quantity that is calculated by *"BackOrderQty+CommittedQty+ReOrder-OnOrder-OnHand"* It will then be rounded up to the minimum order quantity.

To Date Qty – The quantity that have previously been received for this line of the PO.

Receive Qty – Quantity being received now.

Cost – Cost of the item.

Inventory Cost – Unit of measure converted cost.

UOM – Unit of measure of this line. Defaults to the purchase UOM but the user can select another available UOM that has a purchase UOM in inventory.

Tax1 – Tax 1 from the vendor.

Tax2 – Tax 2 from the vendor.

Extended Cost – Extended cost for this PO line.

Duty% – Percentage of duty used to calculate landed cost that gets posted to the accrued duty GL account setup in <u>Company Settings/Special Accounts</u>. This is populated from the duty% in the inventory item, but can be edited by the user. If <u>Company Settings/Inventory/Save Landed Costs</u> is turned on, then the duty in inventory will be updated to the change that the user made.

Duty – Duty accrued for this line of the purchase order.

Freight% – Percentage of freight used to calculate landed cost that gets posted to the accrued freight GL account setup in <u>Company Settings/Special Accounts</u>. This is populated from the freight% in the inventory item, but can be edited by the user. If <u>Company Settings/Inventory/Save Landed Costs</u> is turned on, then the freight in inventory will be updated to the change that the user made.

Freight – Freight accrued for this line of the purchase order.

Reqd Date – The date this line of the PO is required to be received. By default this is not printed on the PO.

Vendor Part No – The vendors part number for this item. On the Spire default purchase order report this code is printed instead of the inventory part number.

Inventory GL – The GL account that this line will be debited to. This can be edited if the user has permission.

If the user has the security setting <u>General Ledger/Edit Journal Entry While Posting</u> active, then they can lookup or type in a different GL account. Use caution when doing this because you are manipulating the default posting setup and if done without the correct knowledge it can produce undesirable GL results. **Location** – The location that this item is stored in the warehouse. The user can edit this and the inventory will be updated when the PO line is received.

Pack Size – The standard pack size that an item is bought and or sold in. The user can edit this and inventory will be updated when the PO line is received.

Sell Price 1 – Level 1 pricing for this item. The user can edit this and inventory will be updated when the PO line is received.

Memo – A memo that can be added on each line, that is not printed on the PO by default.

Reference – A reference that can be added on each line, that is not printed on the PO by default.

Source Type – If a PO was created by the requisition module this will be populated with "Inventory, Sales Order or Production Order" depending where it was requisitioned from.

Source No – The Sales Order or Production Order number that this line was requisitioned from.

Customer – The customer code for the sales order that requisitioned this PO line. This is very useful so that the person receiving this PO does not put this item on the shelf instead of putting it aside for the customer.

Employee – An employee can be selected from the Canadian payroll list for tracking purposes.

Employee Name – The name of the employee selected for this line.

Ship To – The Ship To ID for the sales order where this line was requisitioned from.

Weight – The default weight of this item from inventory. This can be edited by the user but is not written back to inventory.

Ext Weight – The extended weight of this line of the PO.

Purchase Order Footer

| Total Vendor Freight | 0.00 | Discount | 0.0 % | 0.00 | Subtotal | 25,743.50 | All amounts shown in Canadian dollars. |
|----------------------|------|----------|-------|----------|------------|--------------------------|---|
| Landed Freight | 0.00 | Weight | | 5,030.00 | G.S.T. | 1,287.18 | 20 022 72 |
| Landed Duty | 0.00 | | | | BC P.S.T. | 1,802.05 | 28,832.73 |
| | | | | | Created by | y SS on 4/6/2016 7:39:22 | 2 AM Modified by SS on 4/11/2016 7:34:35 AM |

Total Vendor Freight – The freight that the vendor will include on their invoice. If "Enable Landed Cost" is on in <u>Company Settings/Inventory</u> then this cost will get included in the cost of the items received. If it is not on, then the freight amount will get posted to freight expense.

Landed Freight – The estimated freight that gets charged by another vendor that gets included in the cost of the items received. When the user enters the amount to the landed freight field they get prompted for how the freight should be distributed to each PO line. The choices are "Quantity, Weight or cost. The user can then edit each line of the PO if required.

Landed Duty -The estimated duty that gets charged by another vendor that gets included in the cost of the items received. When the user enters the amount to the landed duty field they get prompted for how the duty should be distributed to each PO line. The choices are "Quantity, Weight or cost. The user can then edit each line of the PO if required.

Weight – The total weight of the items on the purchase order.

Sub Total – The total of the PO before taxes and freight.

Tax1 – Total of Tax 1

Tax2 – Total of Tax 2

Total – Total of the purchase order.

Processing Purchase Orders

A purchase order can have 4 different statuses.

Open – Open means that the PO has not yet been sent to the vendor and the items are not put 'On Order' in inventory.

Issued – Means that the vendor has received a copy of the purchase order. With the correct security permissions the user can un-issue and then edit the PO. If un-issuing a PO, care should be taken to make sure that the vendor has the correct copy of it. When the PO is issued and sent to the vendor the items on it get the 'On Order' quantity increased and the PO number gets saved to the 'PO No" field in inventory.

Received – Means that this PO has had some product received on it. It can be un-issued and edited, but the lines that have had products received cannot be changed.

When the items are received and the user clicks the 'Receive' button in the header of the purchase order, the On-Hand quantity of the items are increased and the 'On-Order' quantities get decreased. If the user has the setting Purchase Orders/"Post Invoices to AP" on they will be asked "Would you like to create a vendor invoice?". If they click "Yes" then the user will get the dialog below and the GL account for the item will be debited and the accounts payable GL account will be credited. If they don't have permission or they say no to closing, then the inventory GL account will be debited with the received amount and the 'Accrued Purchases' account setup in Company Settings/Special Accounts will be credited,

Note – If an item on-hand quantity had been allowed to go negative, and the replacement cost is now different, the PO receiving will adjust the 'cost of goods' GL account for the difference. See this link for more details

| | |

Enter in the vendor's invoice number, date of the invoice and edit the terms as required. The values can also be edited but if it does not match the received amount of the PO then the difference will be posted to the 'Inventory Variance' GL account that was set in <u>Company Settings/Special Accounts</u>.

If the user does not enter an AP invoice, the inventory GL account still gets debited, but credit goes to the 'Accrued Purchases' account that was setup in Company Settings/Special Accounts. When the accounts payable invoice is eventually entered via the purchase order it will debit the accrual and credit accounts payable.

Note – If the user enters the the vendors invoice in accounts payable instead of through the PO then the accrual will not automatically be reversed. <u>Click Here for more details.</u>

If the user has the setting Purchase Orders/Close Purchases then once the vendor invoice is posted the user will be asked if they want to close the purchase order. If the amount of the accruals received on the PO do not match the amount posted to AP then the remaining amount will get posted to the GL account setup as 'Inventory Variance' in company settings.

Hold – PO is on hold and cannot be edited.

Standing – A repeat purchase order that once closed stays in the PO list so user can issue it again.

Add – Adds an AP entry and the user can select from any vendor.

Open – Opens highlighted vendors AP

Batch – Opens the 'Batch Payables' module. See link for more information.

Refresh – Refreshes the AP list to see any changes others may have made since clicking on Accounts Payable.

Filter – The user can set a filter to see only the records required.

Search – Searches the vendor record for word(s) entered.

Export – Exports the filtered list to Excel or .csv in the order that the user laid out.

Print – Print all filtered, or selected records.

Header

Open Vendor – Allows the user to open the vendor to see all information including purchase orders not yet closed.

Navigation – Navigates from vendor to vendor in the order that the list AP list was in.

Contact Info – Shows the vendors current contact, credit and year to date purchases.

Items

Refresh – Refreshes any new entries other users have posted.

- Print Prints report with the template of 'Accounts Payable'
- Add Adds an entry to the vendors AP.
- **Apply** Applies payments or vendor credits to an invoice.

Payment – Pays the selected invoice(s). The arrow beside the payment button is to void a selected payment. When voided it will automatically unlink.

Hold – Holds an invoice so it cannot be paid.

Type – AP entry can be one of 4 types.

- Vendor Credit
- Vendor Debit
- Invoice
- Payment

Vendor – Select a vendor to post to.

Date – The date for the transaction.

Transaction no. – The assumed GL transaction number. If another transaction is posted after this number is assigned, then the transaction will be given the next available number.

Reference no. - Usually the vendors invoice number.

Terms – The terms given for this invoice.

Due Date – The due date for this invoice that is automatically calculated based on the terms selected above.

GL Account – The default GL account that was set for this vendor.

Memo – The user can enter a memo for this entry.

Tax1 – Tax 1 for this transaction that is automatically calculated based on how taxes are set for this vendor.

Tax2 – Tax 2 for this transaction that is automatically calculated based on how taxes are set for this vendor.

Subtotal – Total before taxes.

Total – Total of the entry including taxes.

One Time Vendors

Misc Payments

To enter a miscellaneous payment to a vendor that does not exist, select 'One Time Vendor'.

In addition to the info for a regular vendor the user also enters the vendor address.

Note – A vendor will be created with a numeric sequence number. These miscellaneous vendors can be filtered out so they are not seen on the list. If the vendor is used again there is no need to use this one-time option.

Type – Hard coded with 'Payment.

Vendor – If done from inside AP for an existing vendor, this will be the vendors code and it is not editable.

Date - Date for the payment that will be printed on the cheque

Payment no. – The cheque number. This field is alpha numeric so if the payment is done electronically the user can enter something like 'Online' or 'EFT'

Print Check – Each vendor has a field for if a printed check is used for them, however the user can override this. If selected, a check will be printed using the check number displayed.

Transaction – The assumed GL transaction number. If another transaction is posted after this number is assigned, then the transaction will be given the next available number.

Post automatically – If checked then the journal entry will be posted without the user editing it. If unchecked then the user will be given the opportunity to edit it before posting. The ability to edit the posting is a user security setting in Users/General

Reference – Grayed out for payments.

Bank Account – Select the back account for this payment. Uses the default account set in Company Settings/Special Accounts.

Memo – A memo can be added for this payment.

Transaction Number – The GL transaction number from the amount of the AP transaction.

Terms Code – The terms code that was used for the amount

Terms Description - The terms description that was used for the amount

Balance – The balance of the transaction

Pay Amount – User can override this and the invoice will get partially paid have the payment linked to the amount.

Discount Amount – The discount amount. This is calculated by the terms but can be edited before posting.

Discount % – The discount % being offered.

Take Discount – Check to give the discount. Amounts that fall within terms will automatically be checked but user can override.

Total – The amount being paid. It is the sum of the transactions selected for payment.

Batch Payables Header

- Save Saves current batch.
- Save and Close Saves the batch and returns to the AP batch list.
- **Delete** Deletes the batch.
- Print Prints reports with template of 'AP Batch'
- Load Payables Loads all payables that are not yet in a saved batch.
- Select All Due Puts a check mark on all invoices that are due today or earlier.

Discounts – Adds a check to the discount field and applies the discount amount. The user can select from:

- Take Expired Discounts
- Take Available Discounts
- Don't Take Discounts

Note- The user can edit the discount even if the terms did not offer one.

Post – Posts payments and prints cheques.

Open Vendor – Opens this vendor so the user can look at other information like open purchase orders and purchase history.

View PO – View the purchase order that is associated with this amount.

Due By – When the invoice is due for payment.

Currency – The currency of the invoice.

Note that currencies cannot be mixed in a batch.

Payment Account – The GL account (usually a bank account) being used for this payment. All payments in the batch must come from the same account.

Starting Check Number – The next cheque number in the sequence. This number comes from the GL account but can be overridden.

Note – A note that gets saved with the batch usually for the reviewer. For example 'All payments due this week'

Batch Payables Details

Pay – Check to pay this invoice.

Take Discount – When checking the invoice to pay, the discount will automatically be taken if the discount is within the terms. The user can also take the discount if the discount terms have expired.

Discount – The amount of the discount. If the terms have a discount applied this will be populated when selected. The user can also override or enter a manual discount.

Pay Amount – Amount that will be paid after discount.

Balance – The outstanding amount of the invoice before discount.

- Type Invoice, credit memo, debit memo or payment..
- **Vendor No** The vendor code.
- Vendor Name The Vendor's name.
- Date The date of the invoice.
- **Due Date** The due date of the invoice.
- Terms Code The terms code for the invoice.
- Terms Desc. The description of the terms.
- Hold Shows if the invoice is on hold and cannot be paid.
- Transaction No The GL transaction number for the invoice.
- Purchase No The PO number for the invoice.
- Reference No In the invoice, memo or check number for the transaction.
- Memo The memo that was put on the transaction.

Printing Checks

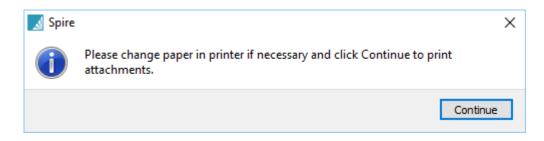

Once a batch of transactions are checked for payment, click the 'Post' button and this screen will be presented.

Click 'Continue' and the report with the template of "AP Batch Payment' will be presented.

Choose the correct report and click on print. The user will be asked if the checks printed correctly. If Yes is selected the screen closes. If 'No' is selected then the print screen comes up again.

If there are more items than will print on a cheque stub then the user will be asked to load blank paper so the cheque remittance can be printed. The number of items that will fit on a stub is set by going into Company Settings/Accounts Payable/Cheque Detail Limit.

Inventory List – When inventory is selected from the main menu, the inventory list is presented to the user either the last way they left it, or using the default, if it was set by the user. It remembers column position, width and the column it was sorted by.

Copy – If a user selects an item and clicks copy, the item is opened and the user can select what to copy to the new item. Then enter a new part number for the item and click OK. The item will then be editable before saving it.

Labels – Any number of item scan be selected and then click on the labels button.

The following dialog will come up and the user can:

- Set Quantity to one of each label
- Set quantity to on-hand for each item (default)
- · Set how many blanks to print first in case some of the labels on the sheet are used
- · Once all selections are made they can print the labels required

Adjust – Any number of inventory items can be selected and then click on adjust. By clicking the down arrow next the the adjust button, it will become a warehouse transfer instead. The items will then be passed to a list that the user can edit and add to. The quantities default to zero so the user can edit them to whatever quantity is required to adjust. The default GL credit account that was setup in Company Settings Inventory is on each line by default but can be edited. <u>See Inventory Adjustments</u> for more detail.

Requisition – Highlight any number of items and click the requisition button. Usually the user will sort ot filter by the column "Suggested Order Qty' and click the requisition button. The items will get passed to the requisition screen where they can be saved for later ordering, or by processing them direct to a purchase order. <u>See 'Requisitions'</u> for more detail.

Refresh – Refreshes the list with any changes made by another user or a process like invoices and purchase order changing on-hand and costs,

Filters – Allows the user to filter the list to only show what they want. <u>See 'Filters'</u> for more information.

Export – Exports the current list layout and sort to Excel or .csv in the same order as listed.

- Add Click to add an inventory item
- Edit Click to edit an inventory item,

Delete – Click to delete an inventory item. There cannot be any on-hand, back ordered, committed or onorder inventory items of this type to be able to delete the item.

Print – Prints inventory reports. Users can select 'Print All' for every item on the filtered list, or 'Print Selected' and then only items highlighted will be passed to the report.

Navigation Arrows – Navigates between inventory records keeping the list filtered and sorted as it was when the item was edited.

Save – Saves and keeps the item open

Save/Close – Saves and closes the window back to the main inventory list.

Delete – Deletes the item if there is none on-hand, back ordered, committed or on-order

Print – Prints reports related to this item

Copy – Copies the item allowing user to edit the warehouse and part number before saving.

Inventory Details

Inventory Type – Inventory items can be set as:

- Normal For normal buy/sell items
- **Non-Physical** For items that are not physically in inventory. Use this for things like labor or miscellaneous items that belong in a particular sales department. Use caution with cost on non

physical items. Be sure that the sales department used does not credit the inventory GL account, unless the user makes sure that an corresponding AP entry gets debited to the inventory asset account.

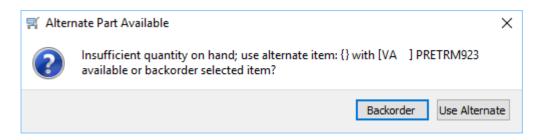

- Manufactured For items where a template is created to deplete raw material items from stock when building and receiving the finished product into stock. The build process will credit inventory raw material and debit inventory finished goods, if their sales departments are different.
- **Kitted** Items that are built 'on-the-fly' then invoiced to a customer. When a kit is added to a sales order it commits the components in inventory. When the order gets invoiced the components are depleted from stock and the kit is put into stock and then immediately removed as the invoice is posted.
- **Raw Material** Treated the same as normal items. The only reason for a different type is that some companies want to see raw material separately in stock from normal items.

Serial/Lot – Inventory items can be set as serialized or lot controlled. When serial numbers are received into stock each serial number has a quantity of 1. Lot numbers can be received with many to the same lot number. When the item is added to a sales order the user is presented with the serial/lot number(s) to select. For more details on Inventory Lot Control See this link.

Product Code – This is used to group common inventory items together. The product code can be related to 'Sales Dept' so that when an items product code is edited the related sales department is also changed.

Sales Dept – The sales department is how the GL posting is defined. Each of the 200 sales departments has an inventory, sales and cost of goods account. See <u>'Sales Dept'</u> in company settings.

Alternate – Sets an alternate inventory item so that if an item is out of stock and it is added to a sales order the user is prompted if they would like to replace it with the alternate, or to back order the item that is short. This is also useful if the item has been replaced and the user accidentally uses the old part number.

Accessory – An accessory will automatically get added to a sales order under the item that was sold. The accessory can be a kit, that will 'explode' onto the order. Therefore several items will get added under the item sold. This is very useful because the user will not forget to include the items. An example would be to add labor and a package of install items for something that needs to be assembled.

Allow Backorders – If unchecked this item cannot be back ordered.

Allow Returns – If unchecked this item cannot have a negative quantity shipped.

Harmonized Customs Code – The customs code that needs to go onto an international bill of lading.

Country of Origin – The country where an item came from that needs to go onto an international bill of lading.

Average Cost – The average cost of an item based on receipts of items. This is the default method of costing and is the most common used

Average Cost = (on-hand x original average cost) + (quantity received x received cost) / (on-hand quantity + quantity received)

Current Cost – What was last paid for an item or what the user edited the cost to. If the on-hand quantity is zero and the user edits the current cost the average cost will get the same value.

Standard Cost – A cost that only changes if the user sets it. This is commonly used to inflate the cost by adding overhead to it. This cost can be used to post to sales history instead of current cost in company settings/Sales Orders/Process/Post Standard Cost to Sales History Current Cost.

A user can be set to see all or any of the above costs in inventory, sales and sales history, in user settings/inventory

Pack Size – The standard pack size that an item is bought and or sold in. This field appears on the sales order line to encourage the salesperson to sell full packs, but does not warn or use full packs automatically.

Weight – The weight of the stocking unit of measure for this item

Location – The location of this item in inventory.

User Type – This alphanumeric field can have its label defined in Company Settings/Variables and has a lookup tables associated with it.

Misc. – This numeric field can have its label defined in Company Settings/Variables

Foreground Colour – The foreground or text colour of an item. The colors are user configured for any purpose the company requires. For instance items that are discontinued can be green.

Background Colour – The background colour of an item.

The colors of items appear in inventory, on inventory lists, in sales orders, on purchase orders and on inventory adjustments.

Primary Vendor – The vendor that the item is usually purchased from.

Reorder Point – How many are required to be in stock for this item. The reorder point is used to calculate the 'Suggested Order Qty'

Min. Order Qty - The minimum the supplier will sell. This is used in the 'Suggested Order Qty'

PO Number The last purchase order number issued for this item. This field is editable.

Due Date The due date of the last purchase order issued for this item. This field is editable.

Duty % – The usual duty charged on this item. This field is editable, and if the 'Save Landed Cost' is turned on in Company Settings/Inventory this will be updated when receiving a purchase order and the user has edited it on the PO line.

Freight – The usual freight charged on this item. This field is editable, and if the 'Save Landed Cost' is turned on in Company Settings/Inventory this will be updated when receiving a purchase order and the user has edited it on the PO line.

Default Expiry Days – When an item that is lot controlled is received this number is added to the receive date to calculate the expiration or best before date.

Extended Description – A long description an be added here for this item. It can be printed on sales reports and invoices. There is a sub report for this purpose on the Spire stock reports but is hidden by default. Contact your Spire partner if you do not have the knowledge to edit this.

On-hand – Quantity on-hand of this item. It includes all committed items.

Committed – Quantity that are committed on sales orders, production orders and inventory adjustments/ transfers in transit.

Backorder – Quantity on back order on sales orders.

- **On Order** Quantity on issued purchase orders not yet received.
- Available On-hand quantity minus committed quantity.

Unit of Measure

- Add
- Delete
- Set Inventory UOM
- Set Sales UOM
- Set Purchase UOM

Each unit of measure has a:

- Code A unique code for the UOM
- **Description** Optional description for the UOM
- Qty. Factor How many stocking units in the conversion
- Direct Conversion Stocking per Unit or Unit per Stocking
- · Fractional Qty Allowed Can this UOM be sold in anything but whole numbers

- Sell Allowed Can this UOM be sold
- Buy Allowed Can this UOM be purchased
- UPC Code UPC code for this UOM
- Location Warehouse location for this UOM
- Weight The weight of this UOM.

The stocking unit of measure cannot be edited unless there are zero of the item in stock.

Pricing

Each sell level can have its own price. The amount can be entered as a price and it will calculate margin, or it can be entered as a margin and it will calculate price. The customer then gets setup with one of the sell levels.

When the cost changes the *margin will not be maintained. *

Sell level can be setup in the multi currency module to be assigned to a certain currency. Then when a customer is added with that currency it uses that level as the customers default sell price.

When a unit of measure is added the price is also added and by default it is multiplied or dived by the conversion factor. The user can then edit the UOM sell price,

Taxes

Tax1 – Tax1 charged by default on this item Tax2 – Tax2 charged by default on this item

Levy Code – The levy or environmental fee charged on this item. There is a lookup to select the levy and they can be added as needed

Allows multiple vendor prices to be added to each item.

- Inventory Warehouse and part number
- Vendor Vendor name
- Vendor Part No Part number the vendor uses and will print on Spire's default purchase order number instead of companies part number.
- Start Date Starting date for this price
- End Date Ending date for this price
- Automatically delete price after expiry Deletes the modified price when it expires
- Unit of Measure Unit of measure for this price
- **Minimum Order Qty** Minimum order quantity for this price. When the item is added to the PO it will put at least this quantity on the order. (uses the suggested order quantity from the inventory list)
- Cost Price Your cost from the vendor

- Variance Difference from the current cost in inventory
- Automatically update vendor cost in receiving When a PO is received and the cost is different than this, this price will be updated.
- Quantity breaks Prices for different quantities ordered

This screen shows all the customers that have purchased this item along with the quantity, price and margin. The user can drill down into an invoice to print, copy or credit it. If they have the security permissions to do so they can edit non-financial information on the invoice. This is especially helpful if the customers PO number was missed or if the wrong sales person was put on the invoice when it was posted. Once edited and saved the invoice can be sent to the customer with the correct Purchase Order number and the commission report can be re-printed with the correct salesperson.

This list can be filtered by many criteria and then exported to Excel or .csv.

The original GL transaction that got posted with this invoice can also be viewed.

Similar to the purchase history tab, this shows receipts for the item. Unlike purchase history this includes all receipts done from purchase orders not yet closed, and it shows all receipts done from the <u>inventory</u> <u>adjustments module</u>.

The PO and the adjustment can be viewed to see what else was on it.

On the upper section it shows:

- Number The lot number
- Hold Whether it is on hold. This is used to quarantine lot numbers
- Available Qty How many are still available to sell or for production
- Unit Cost Cost of this lot number
- Sell Price Sell price of this lot number
- Expiry Date Expiration or best before date

You can select a lot number and see its disposition. The information shown is:

- Number The lot number
- **Type** Type of movement. Can be PORD for PO receipt or Production consumption
- **No** The document number. Can be a Purchase order, an Invoice, a Production or adjustment number
- Receipt No Receipt number
- Date Date of transaction
- Unit Cost Cost of the lot receipt
- **Received Qty** How many were received on a PO or consumed in production
- Sales Qty How many were sold

As you can see by the data saved on a lot number a full tractability can be done. It takes literally seconds to find out where an item came from, who it got sold to, what other item it was consumed by and how many are left in stock.

The serial number tab shows the serial numbers for this item. By default it shows the available serial numbers but the user can select 'Depleted' and 'All' as well.

The upper area shows the serial, the hold flag and the unit cost, and the lower area shows the PO that it was received on, and if sold, the invoice that it was sold on.

Notes can be added to inventory items for various reasons. If the alert flag is set like the example above this note will pop up when adding the item to an order. The note can also be assigned to a user so that when the user logs into Spire and the note is due or overdue it will be included on their alerts list.

This note can also be included on any report. Many of Spire's stock reports have a sub report on them that is hidden and using Crystal Reports your Spire partner can assist to have them print where required.

Any number of attachments can be added to an item. Once attached the user simply double clicks the attachment and it will open in the default viewer for that type of document.

In this example there is a demonstration video attached as well as an instruction book.

If an item is set as manufactured or kitted it will have a components tab. You can see very visually if you have enough stock to be able to build the item. The green dots mean that there is enough of the component, the red dot means that there is not, and the yellow dot means that there is enough for this build but we are over-committed. There is also an orange dot to indicate that we are short, but a purchase Order has already been issued for the shortage.

- Build Click to relieve the components of a manufactured item and add the finished product to stock.
 A journal entry will be posted to credit the raw materials and debit finished goods, if the GL account for the items are different.
- Add Adds a component
- Delete Deletes a component
- Print Prints a report for this template
- **Sub Assemblies** Shows and expands sub assemblies. If there is a + in front of the sub assemblies the components of that sub-assembly will be depleted instead of the finished sub-assembly
- Switch to Alternate If a component is out of stock, clicking this button will switch to the alternate part number if it is setup

• **Copy Components** – If creating a new manufactured item clicking the 'Key Components' button will prompt the user to select another item to copy the components from.

Manufacturing notes – Can be entered here to post notes to history. These notes will not be saved to the components template.

Instructions – Can be added to the top item and line by line on the components. These notes are save to the manufactured item template.

Inventory – Included Reports

Inventory Labels

Labels can be printed from a purchase order or from the inventory list.

Purchase Orders

Click on the label button on the details toolbar of the purchase order and a screen will come up that is populated with the items on the purchase order. The quantities will be set to the receive quantity of if they have not yet been received, the order quantity.

Print – Prints quantities of each item on the list.

Set Quantity to 1 – Clicking this sets all quantities to 1 so only 1 label will be printed for each item.

Set Quantity to BOH – Changes the quantity of labels for each item to the balance on-hand.

Qty – Gets populated with the receive or order quantity from a purchase order and the On-Hand quantity if printed from inventory list. These quantities can be manually edited.

Part – The item for which labels will be printed.

Description – The description of the item for which labels will be printed.

Total Labels – Total quantity of labels that will be printed. This is helpful so that the user loads enough labels in the printer.

Blank Labels – How many blank labels to print before starting the first one. This is helpful if the user is printing on sheets of labels and some were used the last time labels were printed.

Video Instruction – Inventory Labels

Requisitions

Requisitions is the step in between Sales/Production/Inventory and Purchase orders. Items sent to requisition stay on the list until the purchase order is closed or the production order is built.

Save - Save changes

Delete – Delete a line from list

Refresh – Refresh to get changes from other users on the network

Print – Print requisition reports

Hide Processed – Hide requisitions that are already on a purchase order or production order

Process – Create PO or production orders

From Sales Order List

On the sales order list, one of the available fields is 'Backordered'. If there is a check in the box it means that at least one item is backordered on the sales order. If a filter is created that has the criteria Backordered – is true, then the list will only have sales orders with a backorder on it.

We can then simply highlight all the orders on the list and click the 'Requisition Button'.

From Inventory List

On the inventory list the user can highlight any number of items and click 'Requisition'. The usual method is to sort by the column called "Suggested Order Qty" and requisition the required items. The suggested quantity is (BackOrder+Committed+ReOrderPoint) – OnOrder and then rounded up to the suppliers minimum order quantity for that item.

In this example a filter has been created called "Needs Ordering". It has one filter selection - >> 'Suggested Order Qty is not 0.00 and only the columns pertaining to the inventory quantities are selected. Therefore the displayed items on the list need to be ordered.

From Sales Order

If we have back ordered items in a sales order we can see line by line what our default vendor is that we buy the item from. If you want to select an alternate vendor, simply click the lookup. Then click on the 'Requisition' button. The back ordered item will get passed to the requisition along with the vendor from the line of the sales order.

From Production Order

From inside a production order, each component line has an indicator for shortages. The ones with a red dot have no stock at all, the ones with a yellow dot have stock but it is over committed and the ones with an orange dot are short but already has a purchase order created for it.

| Production Order - 000000025 | | | | | | | |

From Production List

When on the production order list any number of orders can be highlighted and then the user can click requisition. The production orders with shortages will be sent to the requisition screen. There is no way to set a filter from the list to know which ones have shortages.

Processing Requisitions

When the requisition button is clicked the list of items that need ordering are populated. The user still has the opportunity to edit the vendor, the quantity and the costs before processing it to a purchase order.

To create purchase orders immediately, click the 'Process' button. The PO number will then get written to the requisition list and if it was created from within a sales order or production order, the PO number will get written to the line of the sales or production order.

When the PO gets created or if adding to an existing PO, the sales or production order number gets written to the PO detail line along with the customer number. This is helpful so that the person receiving the purchase order knows who the items are for and does not store them in the warehouse.

If the requisitions are saved and not processed, then the user or someone else will need to go to the requisition module to process the requisitions to PO's or production at a later time.

Payroll Year End

Note new feature – Even though the payroll year end has been completed the user can still back date a payroll timecard to the previous year just in case it needs to be done. Timecards done in previous year will use the correct year's tax tables.

Payroll timecards are not allowed in new calendar year until prior year payroll has been closed.

| J Error | × |
|---------|---|
| | Unable to create timecard in future payroll year. Please perform a payroll year end before creating timecards for 2017. |
| | Dismiss |

To perform the payroll year-end make sure the following is done first.

Back-up First

- Install Spire 2.4 on all workstations.
- User requires permission in Edit/User Settings/Perform Payroll Year End
- Login into Spire using date December 31, 2016.
- On top menu, go to Payroll/Payroll Year End
- Warning There is no going back without restoring from backup.

Run the TD1 from top Payroll menu

| Inventory | Purchasing | Production | Sales | Payr | oll Tools | Help |
|-----------|------------|------------|-------|------|--------------|------------------|
| | | | | | Payroll | |
| | | | | | Export Payro | oll File |
| | | | | | Payroll Year | End |
| | | | | | TD1 Update | |
| | | | | | Payroll Sche | edule |
| | | | | | Recalculate | Employee Amounts |
| | | | | | Employee T | 4s |

The user can then accept the update percentages on the federal and provincial tabs or edit the percent or amounts in necessary. Click apply to update.

This is a good time to review each employees TD1 claim amounts.

Only run this once, or else the percentages will be done again and the amounts will be incorrect.

Video Instruction on Payroll Year End

Payroll T4s and T4 Summary

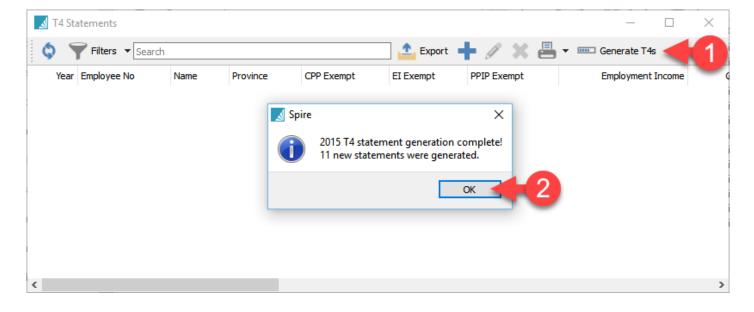

Note that T4s are saved each year, so make sure you select the correct year for printing.

To produce T4s from Spire

- · Make sure all Payroll for 2016 has been posted
- · Perform payroll Year End as per these instructions
- Click Payroll/Employee T4s from top menu

& Service Inc.

Refresh - Refreshes the list for any additions or changes other made to the jobs

Filters – Set a filtered list

Search – Search the job names

Export – Export visible columns to Excel or .csv

Add – Add a job

Edit – Edit a job

Delete – Delete a job

Print – Print all or selected reports

Copy – Copy a job

Job Entry – Enter time, income or expenses directly onto the job ledger

The job is assigned a code and description and the user can add a budgeted income, cost and time so that a foretasted profit is established.

When the payroll timecards are posted a percentage of the overhead (burden) gets allocated to each job on the timecard.

Included in the overhead is

- Employment insurance (EI)
- Canada Pension Plan (CPP)
- Workers Compensation
- · Benefits

If a timecard is reversed it also reverses the overhead from the job.

Utilities

The following section will provide you with an overview of the utilities included in Spire which will include the following topics.

- Inventory Adjustments
- Customer Code Change
- Inventory Code Change

Inventory Adjustments

To setup inventory adjustments go to <u>Company Settings/Inventory</u> and select a default GL account that adjustments should be posted to. This should be a cost of goods account that writes off the inventory.

There is also an optional setting to post a markup percentage on inventory transfers. Usually an income account is selected so that inventory is debited for the increase and the income account is credited. This feature is used when head office wants to add overhead for stocking inventory. The warehouse that the goods get sent to will then realize a higher cost for that item that the main warehouse. This higher cost is offset by the transfer so the companies bottom line does not change.

Inventory adjustments can be reached from 2 places in Spire. From the inventory list the user can highlight the items to be adjusted or transferred and then click the adjustment button on the top of the inventory list. The transfer option is selected by clicking the little arrow in the adjustment button.

The other way to reach adjustments is via the top menu under Inventory/Inventory Adjustments. Click the + button and choose 'Adjust Inventory' or 'Warehouse Transfer'.

Adjustment Header

Save – Saves the adjustment and assigns a number. The items on this list have now been put 'In Transit'. This means that they have been committed in the warehouse. In the case of a warehouse transfer, the items in the 'from' warehouse get committed, and the items in the 'to' warehouse get set as 'On-Order' just like when they are on an issued purchase order.

Save Close – Same as saving but it closes the adjustment and shows the list.

Print – Prints the pending adjustment or transfer

Post – Posts the adjustment/transfer. The items are removed from the 'in transit' state and are posted as receipts. They also get posted to the purchase history table using the adjustment or transfer number as the PO number. This way a user can review and print past adjustments.

User Defined – If a license for UDF's is owned then extra fields can be added to the header and details

Mode - Select between adjust inventory or warehouse transfer

Reference No – User can add a reference number to the adjustment

Date – The date that will get used for the receipt and GL posting

Adjustment No – Adjustments have a sequential number that starts with an 'A' as a prefix and transfers start with a 'T'

NOTE: When an item is highlighted the status of the item shows just below the grid.

Adjustments Body

Delete – Removes a line off of the adjustment

Serial – Numbers – Use to select the serial or lot number to be adjusted

Show UDF – Line User Defined fields can be added if a Spire UDF license is owned

Scan Items – Use this option to scan items one at a time. Users can also directly scan serial or lot numbers and the item will also get populated.

Inventory – Warehouse and part number

Description – Description of part number

Receive Qty – Quantity to adjust or transfer. Use minus quantity to remove items from stock

Cost – Cost of the item. Defaults to the average cost but the user can edit this. (be careful as this should only be used if the GL account is accruing the purchase)

UOM - Unit of Measure to be adjusted. Defaults to the stocking UOM

Ext Cost – Extended cost of the line

Avg Cost – Extended average cost

Sell 01 – Sell price 1 from inventory. This can be edited and it will update inventory.

GL Account – GL account that this line will post to. The inventory GL account for the sales department of this item will always be used for the transaction as well.

Location – The warehouse location for this item. This can be edited and it will update inventory.

Pack Size – The pack size that this item is in. This can be edited and it will update inventory.

Transfer % – The percentage to charge to the GL account that was setup in <u>Company Settings/Inventory</u>.

Adjustment Footer

Notes – Notes can be added for this adjustment and will be save as a communications note in purchase history.

Total Cost – Total cost of the transfer.

Customer Code Change

Customer code change allows the user to change the customers code and once applied it changes the code in all of the tables where that customer was previously posted. Once applied it will be as if that customers code always had the new code. No history of the old code is kept.

This utility is accessed from the top menu under Customers/Customer Code Change and requires the User setting Customer/Change Customer Code.

| 👵 Customer Cod | e Change — | | × | | | | | | | | | | | |
|-------------------|-------------------|--|------|--|--|--|--|--|--|--|--|--|--|--|
| aga Apply 🔛 🛃 📇 🗮 | | | | | | | | | | | | | | |

| | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | |

Apply – Posts the record and history changes

Save - Saves the selected list

Save Close – Saves the list for later posting

Print - Prints report for list

Delete - Deletes the selected line

NOTE:- That posting the changes requires exclusive use of Spire, however adding to the list does not.

Inventory Code Change

Inventory code change allows the user to change inventory codes and once applied it changes the code in all of the tables where that the item was previously posted to. Once applied it will be as if that inventory code always had the new code. No history of the old code is kept.

This utility is accessed from the top menu under Inventory/Inventory Code Change and requires user setting Inventory/Change Inventory Code.

Apply – Posts the record and history changes

Save - Saves the selected list

Save Close – Saves the list for later posting

Print – Prints report for list

Delete – Deletes the selected line

All Warehouses – Once an item is added to the list, highlight it and select 'All Warehouses' and each of the other warehouses with this code will get added to the list.

Utilities – Included Reports

Optional Add-ons

The following section will provide you with an overview of the available Add-on modules for Spire.

This includes the following Add-Ons currently available for Spire:

- Production Manager
- Service Manager
- Canadian Payroll
- User Defined Fields

Production Manager

Production Manager add-on lets you control inventory with pinpoint accuracy, reduce unplanned expenses and improve cash flow. Efficiently plan production from beginning to end and track progress with real-time information on raw materials, costs and production status.

Features:

- Commit raw materials before production begins
- · Link production order to sales orders
- · Customize production builds on the fly
- · Create subassemblies for a single product
- Track work in progress (WIP)
- · Manage production phases with one click
- · Automatically generate requisitions from inventory shortages and create purchase orders
- · Reorder reports based on committed items and date requirements
- Print production schedule
- Print production orders
- · Automatically create production orders from shortages
- · Automatically create production orders from sales orders

Refresh – Refreshes the list of production orders for changes that others have made.

- Filters Sets filters to see just the production orders required.
- Search Enter the word(s) to find info from the header or details of production orders.
- **Export** Exports the filtered list to Excel or .csv.
- Add Adds a Production Order
- Edit Edits a Production Order
- **Delete** Deletes selected production order(s).
- Print Prints selected Production Order(s).

Build – Builds selected Production Order(s) to receive the finished product using the total component cost, and relieves the components from inventory.

Requisition – Requisition shortages for selected Production Order(s).

Copy – Copies a Production Order to a new one.

Pull From Templates – Pulls details from the template from which the production order(s) were derived. This is useful to update the production order if the template has been edited.

Next Status – Moves the selected production order to the next status.

Next Phase – Moves the production order to the next phase based on the custom phases setup in production.

Order No – The sequence number assigned to the production order. It gets the next sequence from Company Settings/Sequence numbers.

Customer No – The customer that this production order is for. It can be added manually or it can come from sales orders when a user requisitions a manufactured item.

Name – The name of the customer the production order is for.

Warehouse – The warehouse where the item will be 'Built' into.

Part Number – The part number of the item that will be built.

Description – The description of the item that will be built.

Required Qty. – The quantity that is required to be built. This can be entered manually or can come from the shortage on a sales order when requisitioned.

Built Qty – The quantity that has been built so far on this production order.

Remaining Qty – How many are left to be built on this production order.

Order Date – The date the order was added.

Reqd. Date – The date that is required fore this production order to be completed. This date is either added manually or will come from the required date of a sales order requisition.

Status – The status of the production order.

• **New** – This means the components of this production order are not yet committed in inventory.

- Pending The components are now committed and this usually means that production has not yet started.
- In Progress The components are committed and the work is now in progress.

Priority – Users can set a priority so that they can sort by this to see the most important ones, or derive a report based on priority.

Phase – What phase the production order is currently in.

Phase Date – The date that this production order was moved into its current phase

Sales Order No. – The sales order number that this production order is from. This can be manually entered or come from sales order requisitions.

PO Number – The customers purchase order number.

Reference No – A reference number that gets manually entered.

Created By – The initials of the user that created this production order.

Modified By – The initials of the user that last modified this production order.

Template No – The template number that this production order was derived from. If this is blank it means that it was created as a custom order from the start. A production order can become a template for later use.

Templates

The Production templates tab is where the components are defined for production orders. They are otherwise known as 'BOMs' or 'Recipes'. When a new production order is created the user can select the template from which to derive the order. The production order can then be customized for a particular need. If a template changes then the user can choose to update the existing open production orders with the changes.

Refresh – Refreshes the list of templates for changes that others have made.

Filters – Sets filters to see just the templates required.

- Search Enter word(s) to find info from the header or details of templates.
- Export Exports the filtered list to Excel or .csv.
- Add Adds a template
- Edit Edits a template

Delete Deletes selected template(s).

Print – Prints selected template(s). Reports with 'Production Template List' as the Crystal Reports template will be presented for printing.

Copy – Copies the selected template to a new one.

Create From Templates – Pulls details from the template to a new production order.

Template No – The sequence number assigned to the template. It gets the next sequence from Company Settings/Sequence numbers.

Customer No – The customer that this template is usually for.

Name – The name of the customer that this template is usually for.

Warehouse – The warehouse where the item will be 'Built' into.

Part Number – The part number of the item that will be built.

Description – The description of the item that will be built.

Priority – User can set a priority so that they can sort by this to see the most important ones, or derive a report based on priority.

Created By – The initials of the user that created this template.

Modified By – The initials of the user that last modified this template.

Production Order

Production Order

Once a production order has been created it can go through several steps before it gets built and received to inventory. Click on add or edit to open a production order.

Header

 $\label{eq:save-saves} \textbf{Save} - \textbf{Saves the production order}.$

Save/Close – Saves and closes the production order.

Delete Deletes production order.

Print – Prints Production Order.

Build – Builds Production Order to receive the finished product using the total component cost, and relieves the components from inventory.

Requisition – Requisition shortages for Production Order.

Next Phase – Pushes the production order in the next phase in the sequence.

Navigation – Moves from order to order in the sale order that the list is in.

Attachments – Can add any number of attachments to the production order. Double clicking the attachment will open it with its default viewer.

Communications – Any number of notes can be added.

Phase – What phase the production order is currently in.

User Defined – User defined fields can be added to the production order to track info that Spire does not have by default.

Build No – The number assigned to this production order coming from the next number in the sequence taken from Company Setting/Sequence/Production.

Sales Order – The sales order number that this production order is from. This can be manually entered or come from sales order requisitions.

Phase – What phase the production order is currently in.

Customer – The customer that this production order is for. It can be added manually or it can come from sales orders when a user requisitions a manufactured item.

Order Date – The date the order was added.

Required. Date – The date that is required fore this production order to be completed. This date is either added manually or will come from the required date of a sales order requisition.

Phase Date - The date that this production order was moved into its current phase

Status – The status of the production order.

Reference No – A reference number that gets manually entered.

Priority – Users can set a priority so that they can sort by this to see the most important ones, or derive a report based on priority.

Customer PO – The customers purchase order number.

Detail Menu

Add – Adds a component or sub-assembly line.

Delete Deletes a component or sub-assembly line.

Sub Assemblies – Allows the user to toggle sub-assemblies on or off and to expand all available sub-assemblies.

A sub-assembly is indicated by a square dot on the detail line instead of a round one.

When sub-assemblies have the arrow in front of them and the production order gets built, it will consume the components of the sub-assemblies and NOT a finished sub-assembly.

Serial Numbers - Used to select serial or lot numbers of the components.

Switch to Alternate – If an item is short as indicated by a red or yellow dot, clicking this button on a detail line will switch the item for its alternative as set in inventory edit.

Show UDF – Shows the user defined fields for the details of a production order. Used to track extra info not normally in Spire. (Note- a license for Spire UDF is required)

Pull From Template – Used to pull the components onto the production order from the template indicated on the top assembly item.

Push To Template – Pushes changes on this production order back to the template from which this order was derived.

Commit Item – Commits the components in inventory for the selected line of the order.

Details

Inventory – The item being built on the top, and the components and sub-assemblies beneath it.

Description – The description of the items.

Quantity – The quantity of the finished item on top and the quantities of components and sub-assemblies that will be consumed beneath it.

Built Qty – The quantity of the top item that have been built so far and quantity of components and subassemblies that have been consumed so far.

Remaining Qty – Now many still left to build and consume.

Extended Qty – Extended quantity of components calculated by the total to be built times the quantity of the component.

Unit Cost – The cost of the top item is the sum of the components cost, The component cost comes from the inventory cost.

UOM – The unit of measure being built and consumed.

Conv. Factor The conversion factor for the unit of measure.

Inv. Usage – The inventory usage is calculated by (quantity being built) X (Component quantity) X (UOM conversion factor).

Lead – The lead time from the supplier.

Vendor No – The vendor the component is usually purchased from.

Category – The category for the top and components. This is just used for reporting.

Exp. Yield% – The expected yield for this top item.

Exp. Scrap% – The expected scrap for this component.

Exp. Scrap Qty – The expected scrap quantity for this component.

Act. Scrap Qty – The actual scrap quantity for this component. This is usually edited just before building the production order.

Assemble Qty – The quantity to assemble based on yield.

Assembled Qty – The top item quantity that was built based on yield.

Date – The date the line was committed.

Employee – The employee code can be added manually to indicate who was responsible. (Canada Only)

Employee Name – The employee name selected above.

Requisition Type – If this production order was created from a requisition, it will indicate 'Inventory' if it was requisitioned from the inventory list, or Sales Order' if it came from a sales order'

Requisition No – The purchase order or sales order the requisition came from.

Template – The template from which this order came from. If blank it was created manually as a custom order.

Revision – The revision number of the template.

Production – Included Reports

Processing

To meet the requirements od a production order the user can either visually look at the order to see if it can be built by looking at the colored indicators.

Green – on the top item means that all components or sub-assemblies are available to proceed. **Yellow** – means that this production order can be built but at least one component is over-committed elsewhere. Once built other orders may now be short.

Red – tells the user that one or more components are not available. In company settings/Inventory if 'Over commit is not allowed, then the user cannot build.

It is not recommended that the company allows over committing of inventory as the cost that will be used in production will not be accurate. When a PO is received for an item that was negative and the cost was different, the difference will be posted to the cost of goods account for that item.

To get a printed version of shortages, click on the print icon and select "Production Trial Build" report.

Once a production order has been scheduled the company would normally print a 'Production Order' also know as a traveler.

Service Manager

The Service Manager add-on will help improve customer satisfaction and increase the efficiency of your service business. This add-on gives you quick access to all service records, making it easy to track the history of each piece of equipment.

Features:

- Track equipment by customer
- View/print equipment service history
- Set follow-up dates
- Flexible sorting of parts and labour information
- · Create purchase orders from service orders
- Link purchase orders to service orders
- · Multiple word search of all records
- Automatic shop supplies

Video Instruction

User Defined Fields

Overview

The UDF module allows you to add fields that are not included in the default Spire program. There are several types of data fields that can be added and they can then be given parameters for how the data is to be formatted. Once entered, this data can be added to stock or custom reports.

An example would be if a food product in inventory needed the ability to be identified to whether it is 'Gluten Free'. This could then be printed on to packing slips and invoices.

The UDF tab appears in all modules so extra data can be added wherever it is required. The data can be organised into several tabs so that information can be grouped.

The types of fields that are available are:

- Numeric
- Text
- Drop Down Lists
- Check Boxes
- Dates

Each of these types can then have validation added to them. For instance, you can specify if a date field is allowed to be a blank, if it defaults to blank or to today's date. The date can be forced to be within the current month or in to current fiscal year.

Each field added can be set to be 'Required' so that a record cannot be added without filling in that field. An example would be when creating a new customer, the UDF field "Wants Emailed Newsletter" and the options are a drop down of 'Yes' or 'No' the person adding that new customer would be forced to select one of the choices before saving.

To be able to edit the User Defined Fields' structure the user requires the setting 'Edit UDF Structure' under Edit/Users/General to be turned on.

A license is required for UDFs so contact your Spire partner if you would like to purchase it, or if you would like to take it for a 30 day test drive.

Configuring Your Custom Fields

Configuring your custom fields

Make sure you first have access to design the UDF structure.

To add new fields to one of your modules, go to the tab "User Defined" within one of the records. In this example we will add some fields to the sales order. Note that fields added to sales order will get posted to sales history.

Open a sales order and go to the 'User Defined' tab.

First you need to add a 'Page' to the structure by clicking on 'Add Page'. Give the page a name that will appear as a tab.

| 🛒 Standing - 0000102600 Hastings Communications | – 🗆 X |

| Created by SS on 8/26/2014 11:44:59 AM Modified by SS or | |

Within the page info dialog click 'New' to add a field.

In this example we added 3 new fields in our page called 'Size Info'.

- Height
- Width
- Length

We set the 3 fields as numeric with 2 decimals.

| Ship Reproce | View Compact | Totals By Ordered Qt | y 📖 Requisition | Deposits | кк | > |

You should take care when creating the field names because when data is retrieved by Crystal Reports it is case sensitive. Therefore if you set the field name as Due Date and you ask Crystal to retrieve DUEDATE it will not return any results.

We can also set some validation for the fields we added.

| 🛒 User Defined Field - | | ? | × |
|--|------|----|---|
| General Validation/Format | ting | | |
| ✓ Presence check (<> 0) ✓ Range check Minimum Maximum | | 12 | 2 |
| | | OK | |

On this field we checked that the field cannot be zero and has to fall between 2 and 12.

We also added a page called 'Progress' and included a field called 'Required Date' and made it left aligned, and formatted as MM/DD/YYYY.

| 🛒 User Defined Field - | | ? × |
|---|---|-----|
| ♥ User Defined Field - General Validation/Formatting Properties Field name ReqDate Label Required Date Field type Text Box ▼ Alignment Left Center Right | Currency Percent Date Text Masked Text DD/ DD/ VY/ | ? × |
| | | OK |

We can also add date validation by selecting

- · Allow blank dates
- Default to blank date
- Fiscal Period validation
- * Current month
- * Current year
- * Within fiscal periods
- Post-dated message
- · Back-dated message

If the post-dated or back-dated message options are selected the user will be prompted with a message that the date is either before or after the fiscal validation. But then still let them enter it.

| 🛒 User Defined Field - Required Date | ? | × |
|--|----|---|
| General Validation/Formatting | | |
| Allow blank dates Default to blank date | | |
| Fiscal period validation | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | OK | (|

In the case of a text field it can be masked and have the case defined. In this example we added a cell number and we want it formatted as 555-5555 for use the number symbol ###-#### with – between them.

Another example is that if you want a text field to only be a certain width you can set it as 'masked text' and set the width by populating the mask with a quantity of & to equaling the width. For example if you want it 6 characters wide enter &&&&&.

| 🛒 User Defined Field - Cell | Number | | ? | × |
|---|--|----------------------------------|-----------|---|

Entering UDF Data & Using them in Reports

Entering data in UDFs

Entering data into the fields that you created is done by going to the 'User Defined' tab of the module.

| Image: | |
|---|------------|
| Details Prices and Units Price Matrix Vendor Prices Sales Sales History Purchase History Statistics User Def | |
| | |
| | ned Receip |
| Food Info Preparation Info | |
| Gluten Free 🗸 | |
| Kosher 🗸 | |
| Store Temp (Degress C) 5 | |

All the formatting you applied when setting up the fields, are respected.

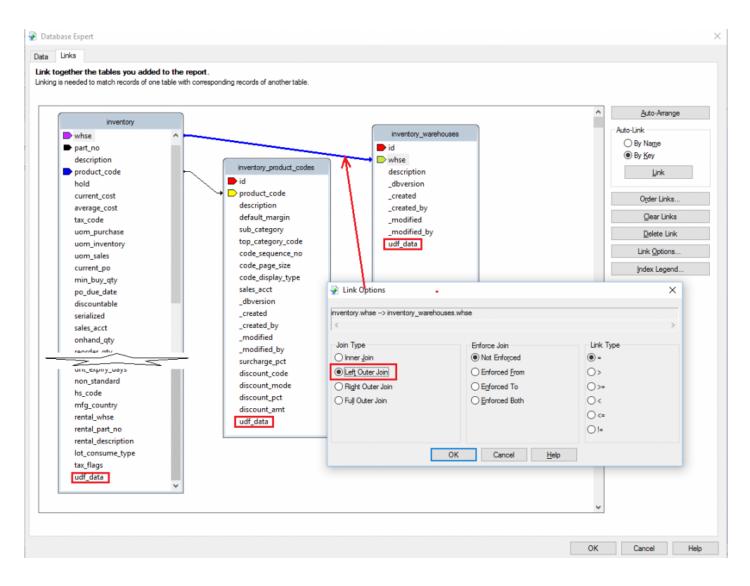

Creating Reports on UDF data

Open Crystal Reports and edit the report that needs UDF data added to it. In this example we will edit the 'Inventory Stock Status' report.

Go to 'Database Expert' and add the tables that are required for the report.

| ata Links | | | |
|---|---|---|--|
| Browse the data source for the tables you want Note: to edit the alias for a table, select the table in the 'S press the F2 key) Available Data Sources: | | tree and click on it or <u>S</u> elected Tables: | |
| Tables addresses ap_batch_items ap_batches ap_transaction_links ap_transactions ar_transaction_links ar_transaction_links ar_transactions bom_categories bom_item_replacements cce_call_log cce_case cce_subject countries currencies customer_code_changes | ▲ | PostgreSQL35W inventory inventory_product_codes inventory_warehouses | |

Set the join type to 'Left OuterJoin' Click OK

Add a SQL Expression Field by right clicking and selecting 'New'

| 📌 SAP Crystal Reports - [Inventory Status UDF] | A | SAP | Crystal Reports - | [Inventor | y Status UDF] |
|--|---|-----|-------------------|-----------|---------------|

| Field Explorer | ą × | Inventory Status UDF × | |
| 🗢 🖉 🖻 🥒 🕆 🖶 | × | Design | _ |
| ☐ Database Fields ☑ inventory ☑ inventory_product ☑ inventory_wareho ☑ fx Formula Fields ☑ SQL Expression Fields ☑ GlutenFree | ouses | Report Header b Page Header a | ter |
| Skosher | SQL Expression Name | × | |
| NutFree Parameter Fields ∑[™] Running Total Fields Group Name Fields Special Fields | Name: StoreTemp | | Jp rod |

Give the SQL Expression a name. This example is 'StoreTemp'

The SQL expression looks like this - ((inventory.udf_data)->'StoreTemp')::numeric

| | | Formula Workshop - SQL Expression Editor - Stor | eTemp | - 🗆 🗙 |
|---|--|---|---------------|-------------------|
| Save and close 🖬 Save |] D 🔹 📴 🖉 🖉 🤊 | 彡 × 〃 包 鵯 鵯 | | |
|) 🍄 ର ର 🕸 🛤 🔺 🎗 | \$ % 🌾 😫 🕎 😤 🗮 | ~ <i>//</i> | | |
| Report Cuttom Functions Report Cuttom Functions Formula Relds Supression Relds - GG Gutenfree - GG Gutenfree - GG Suber Temp - GG Store Temp | <pre>X @ PostgreSQL35W (ODBC (RDO)) </pre> | mp')::numeric | x ⊕ Qperators | |
| | | | | |
| | | | | |
| | ¢ | | | ∨ i⊧. ∢ |

Other examples"

- ((inventory.udf_data)->'GlutenFree')::boolean
- ((inventory.udf_data)->'Kosher')
- ((inventory.udf_data)->'NutFree')

NOTE

- · the Field Name is case sensitive
- ::numeric denotes a number field in Crystal Reports Designer
- ::date denotes a date field
- ::boolean denotes True/False
- if ::type is left off then it will be a text field

Once data is saved here is what it looks like stored in a field called udf_data

| 295 | 172 VA | CUCBBT12548K | Chin Up Bar 1.25" x 48" Bent | |
|-----|----------|--------------|------------------------------|---|
| 296 | 25007 VA | TAPSTARCH | Modified Tapicoa Starch | |

Customer Specific Part Numbers

Video Instruction – How to use 'Price Matrix' to set customer specific part numbers.

Why is Enter Different than Tab

In Spire we use the tab and enter together to speed up the data entry process. The tab key moves the user from field to field and the enter key takes them to the next line.

This is especially helpful in sales entry when adding items and using all defaults or maybe a few changes.

The user would enter the part number and then if they accept the quantity of 1 and the regular price, just hit enter for the next line. If the quantity and price are often edited, move those 2 fields next to the part number and the user would just have to enter the part number then tab and change quantity, then tab and change price and then enter to get to the next line.

Video Instruction – Tab and enter in Spire

Inventory Count

Video Instruction – Use Inventory exports and adjustment import to perform an inventory physical count.

| | | | 7 | | 2.5 | | | | |

Receiving Negative Inventory

When inventory is allowed to be sold or consumed so that the on-hand quantity is below zero it means that the item is potentially sold to the customer at the the wrong cost.

Let's look at this example.

Item INSDB55 Average Cost \$100 On-Hand negative 2 Sell \$145 Margin 31.03% Replacement cost \$110.

We see on this sales order that the cost is \$100, the margin is 31.03% and the on-hand is -2.

| Part No | | Comment | U/M | | | | _ | Unit Price | Current Cost | Margin (Avg) | Average Cost | Inv. Committe | d Laur | Ext Price | Conversion Factor | COT |

If we would have had received the quantity into stock previous to selling it the cost would have been \$12 instead of \$10. This means that the sale was posted to the customer and to the GL at the wrong cost.

The sales history cannot be changed, however to maintain correct GL costing and to keep the GL balanced to the inventory Spire does correct the costing when the items are received.

Notice that the \$20 difference was posted to cost of goods like it would have if the item was received before invoicing it to the customer and therefore pushing it to negative on-hand..In the end, the correct amount of \$120 was posted to cost of goods.

Video Instruction – Receiving negative on-hand items.

Tips & Tricks

Excel Pivot Tables

By utilizing Spire's filters and exports, users can export data to Excel and then create a separate spreadsheet with pivot tables to analyze the data many different ways. Then each period just re-export the data and simply refresh the Pivot Tables.

By creating several exports, users create themselves a "Dashboard" with only the data that they are interested in.

See this video on how to accomplish this.
